# Cable & Wireless on verge of joint venture in China

Europe's Business Newspape

UK telecommunications group Cable & Wireless claims to be on the verge of a breakthrough in its bid to enter the Chinese market. Chairman Lord Young said the company had been designated by China's ministry of post and telecommunications "preferred partner" for joint ventures, the first of which could be agreed this year. # Delors urges EU to strive for 'democratic Utopia'

By David Gardner in Brussels

Mr Jacques Delors, president of the Mr Jacques Desors, presument of the European Commission, yesterday called on Europe to lift its sights towards a "democratic Utopia", capable of provid-ing minimum social rights for all. He warned that attempts to use recession, Europe's competitiveness problems and the jobs crisis as an excuse to dis-mantle "the European model" of social

protection would destroy centuries of striving towards "a balanced society". However, in an elliptical speech which centred as much on public morality as on policy, Mr Delors was also dismissive of those opposed to any reform of

Europe's social and welfare arrange-

"We have to get away from the battle between those who don't want to change anything simply because of tradition, and those who want to do away with 150

years of social progress," he said.

Mr Delors' unscripted remarks – made to a public seminar before the publication of the Commission's white paper on the future of EU social policy, expected in July - were expressed with a force not used since before the December 1991 summit which agreed the Maastricht

treaty. The Commission president, who ends his turbulent 10-year tenure in Brussels next January, said those who say Europe's welfare system is holding back growth have forgotten that the three recessions of the past 20 years could have degenerated into a 1930s-type depression if such protection had not protected minimum incomes and

"Don't throw the baby out with the bathwater," he said. Neither was protectionism a feasible or defensible way of preserving Euro-

pean standards from lower-wage competitors in Asia and Latin America. "How would they buy from us?" Mr Delors asked, arguing that "trade is not a one-way street, it is a two-way motor-

way". He revived the idea raised after last year's chaos in European currency markets for a UN-style "security council for the economy", to manage economic and monetary shocks, and even cross-border problems such as sudden surges in emi-

Mr Delors said Europe was struggling to adapt to technological progress in terms of job creation and organisation of working time. It was failing to get to grips with difficulties ranging from an geing population and healthcare costs, to youth unemployment, racism, the disintegration of the family and loneliness. All this, Mr Delors said, was "a problem

of society's soul". But "there is a European model of society", he believed, and it had to be developed, more into "a system balanc-ing obligations and rights". He implied

that some payment of unemployment benefit could be linked to the provision of services which meet public "We have to rehabilitate the idea of

public service," he argued, and "we have to enrich our social system". Mr Delors insisted: "It is not by backtracking on social policy that we will resolve our problems. I would call what I am suggesting a democratic Utopia, but it is not unattainable."

# Pilkington bows to US pressure on process licensing

By George Graham in Washington and Andrew Taylor

Pilkington, the UK glass maker, yesterday agreed to make far-reaching changes in its technology licensing policy in what is the first application of an aggressive US anti-trust policy beyond US borders.

The company agreed with the US Justice Department to end restrictions on licensees for the use of its float glass technology, which has kept Pilkington at the top of the world plate glass industry for 30 years.

The Justice Department said the agreement, which must still be approved by a US federal judge, would "break a licensing stranglehold on glass manufacturing that kept American coming glassmaking plants

Pilkington said the agreemen would have no material impact", apart from the potential loss of less than £1m (\$1.5m) a year in licensing fees. However, the case sets a precedent for the ability of the US government to influence of foreign companies in international markets.

"We are satisfied with this arrangement which protects a large body of technology developed by the group," said Sir Robin Nicholson, the company's technology director.

Pilkington earned pre-tax profits of £40.7m on sales of £2.5bn during the year to March 31 1993. Of this, about £10m is thought to have come from licence fees. Pilkington's shares rose 1%p to 188p in London yesterday.

According to the UK company,

the agreement means that US

glass makers using pre-1983 technology under licence from Pilkington will now be able to sub-license the technology to any tain confidentiality agreements. Pilkington said it retains the rights to later technology not subject to licence agreements with US companies. The deal averts a potentially costly battle in the US courts, although Pilk-

Justice Department officials id the settlement could enable US companies to win contracts for as many as half of the estimated 50 new plate glass plants that are expected to be built over the next six years, mostly in eastern Europe and south-east Asia, and increase US exports by up to

\$1.25bn over the same period. The case represents not only a new aggressiveness in the Clinton administration's enforcement of auti-trust law but also a new willingness to pursue claims against companies outside the

The Justice Department said Pilkington had imposed tough restraints on companies which bought licences for its technol-ogy: It allegedly limited them to specific countries, restricted their ability to sub-license the technology and required them to report back to Pilkington all improvements they made in the commercial float glass process.

# PC screen text fails the test of readability

If you find it hard to read words on a personal computer screen.

you are in good company. A leading US-based computer scientist warned last night that even the best of today's personal computer screens could not dis-play extended text, such as newspaper articles or encyclopaedia entries, so they can be read in comfort. The better a reader you are, he said, the more difficulty you will experience in reading

from a screen. Mr Alan Kay, widely credited as the inspiration behind many of the best known features of PCs including screen "windows" and the "mouse" pointing device, said the discovery called into question the use of computers for teaching reading.

He said: "It is almost a crime to put computers into schools to teach reading because nothing is more antagonistic to the act of reading than a conventional computer screen". It also raises questions about the suitability of PC technology for on-line text retrieval and other information and entertainment services.

Mr Kay, formerly a top scienfellow at Apple Computer, was giving the sixth Charles Read Memorial lecture in London.

Mr Kay's conclusions were based on experiments carried out

# Austrian consortium bids for bank stake

By lan Rodger in Zurich

The struggle to privatise Creditanstalt-Bankverein, Austria's second largest bank, moved into a decisive phase yesterday as a consortium of leading Austrian financial and industrial companies offered Sch7.2bn (\$626m) for just over half the government's 70 per cent voting stake in the bank.

The consortium was assembled quickly in the last few weeks to counter a hid by the Swiss CS Holding financial group that had the apparent support of Mr Ferd-inand Lacina, the Socialist finance minister.

Mr Lacina has argued that Creditanstalt needs a strong strate-gic partner. But politicians and business leaders close to the conservative Austrian People's party have reacted angrily to the pros-pect that the bank might fall into foreign hands.

Mrs Maria Schaumayer, the widely respected president of the Austrian National Bank, said in an interview last week that Creditanstalt "must sail under the Austrian flag, not the Swiss one." The consortium is led by RA-Generali, the insurance group, and First Austrian, a large Vienna savings bank. R includes 18 blue-chip industrial companies, such as Brau-Union, Porsche, Radex, Swarovski and Constantia, as well as some unidentified private individuals.

# China liberalises in drive to join world trade body

By Tony Walker in Beijing and Louise Lucas in Hong Kong

China launched a determined drive yesterday for admission to the World Trade Organisation, the successor body to the General Agreement on Tariffs and Trade, by removing import licences and quotas on 195 items. It pledged further liberalisation.

The approuncement came before an expected US renewal of China's trading status as a Most Favoured Nation by President Bill Clinton. That imminent decision was welcomed by Mr Peter Sutherland, director-general of Gatt, speaking in Hong Kong yes-

China has stated its desire to be a founder member of the WTO, expected to be established on January 1 to replace the Gatt. The country was a Gatt founder member but left the body after the communists came to power in

In spite of the liberalisation package yesterday, quotas and licensing restrictions still apply to more than 700 products, but China says it would phase out half of those restrictions under an existing accord with the

Mr Long Yongtu, China's chief Gatt negotiator, is due to visit Europe and the US for Gatt discussions next week. He will go first to Brussels, then to Washington, where Gatt talks are scheduled on June 3, the deadline for US renewal of China's MFN

apparently found willingness to meet Gatt's entry requirements and considerable work remaining to be carried out to meet its

Gatt has no responsibility in the area of political issues which underly the issue of MFN status, but the MFN decision has an indirect effect on the negotiations because MFN policy is relevant to Gatt members," Mr Sutherland

To secure Gatt membership, he said, China had to improve the transparency of its existing trade regime, demonstrate uniformity in applying those laws, clarify how its trading companies oper-ate, and elucidate tariff and nontariff barriers. But Mr Sutherland emphasised

that significant steps had already been taken in both trade and foreign exchange regimes. While questioning China's ability to become a member by January 1, he was confident that the WTO itself would be in place on sched-

"I believe Mr Clinton is absolutely committed to the January 1 date, and I believe it's very important that the US as a leading trading country with an absolute interest in the development of the multilateral system should provide leadership in this area, and it seems it is determined to

He added: "I would consider it inconceivable that the US would retard the progress of something not just desirable for the world as

# Mr Sutherland recently a whole, but for the US itself." Int. Band Ser

# Kozyrev cool on plan to defuse ethnic disputes in Europe

# Russia rejects French initiative

By Anthony Robinson and David Buchan in Paris

Europe's latest exercise in preventative diplomacy, a French-inspired stability pact designed to defuse ethnic and territorial disputes among aspiring members of the European Union, received a cool response from Russia at its conference launch yesterday.

Mr Andrei Kozyrev, the Russian foreign minister, welcomed what he called "yet another attempt" to come to grips with "signs of aggressive nationalism, xenophobia and ethnic and religious intolerance." But he then underlined that "the decisive role" in constructing a new Europe with Russian participation should be played by the 52-Nation Conference on Security and Co-operation in Europe (CSCE) and Nato's "Partnership for Peace (PFP)".

In a speech which reinforced the call for a new European security order by General Pavel Grachev, the Russian

Balladur and Kohl call for wider Euro-summits

Prime Minister Edouard Balladur and Chancellor Helmut Kohl yesterday propose that leaders of east European countries, once they have applied to join the European Union, should hold a joint summit with their EU

counterparts once a year, writes David Buchan. The proposal, contained in a jointly signed article in yesterday's Le Monde newspaper, was timed to coincide with the opening in Paris yesterday of the French-sponsored "conference on stability in Europe" and to identify Germany closely with it. The need

for wider annual European summits and the stability conference initiative stem, according to the two men, from "a realisation that political stability is an essential condition for economic and social progress" in eastern Europe. "What would be the value of the free trade and association agreements with central and eastern Europe, even their future membership of the European Union, if serious political crises, notably provoked by frontier and minority problems, were to put this progress in question?" ask the two leaders.

Nato meeting in Brussels, Mr Kozyrev said: "Enhancing the narticination in the proposed Baltic "round table". This is designed as a forum to facilieffectiveness of the CSCE, making it the supreme political tate an equitable solution to the protection of the rights of organisation on the continent, Russian and other minorities is the key element in our proposed concept of European in the Baltic states and the partnership." total withdrawal of Russian The three former Soviet Bal-

forces. tic states were looking for a Russian minister clear Russian commitment to described the stability conferthe withdrawal of the remainence as a "unique" process but ing Russian troops and equipnoted that it involved the 12 ment from Estonia and Latvia. current and nine aspiring But Mr Kozyrev merely left members of the EU but did open the possibility of Russian "not create additional obliga-

tions for states which are not directly involved in it." Russia, which this week agreed to join the Partnership for Peace, is not an applicant for EU mem-

For Russia to participate in the round table's work he made clear that it should not dwell on the military aspects but "concentrate on specific stens to improve inter-ethnic relations and to ensure the rights of national minorities... especially in Estonia, Latvia

The military and political dimensions of Europe's secu-rity, he said "should find its place within a framework of broader efforts" than the EUsponsored security pact conference. "We attach serious significance to the forthcoming Istanbul ministerial meeting of the North Atlantic Co-opera-tion Council (NACC)," he added.

The main focus of the proposed security pact, as outlined by Mr Edouard Balladur, the French prime minister, in his opening statement is to resolve contentious ethnic and border issues and prevent future Yugoslav-style eruptions. But the foreign ministers of Poland, the Czech republic and other central European and Baltic participants rejected suggestions that eastern European countries that want to join the EU be subjected to special treatment with regard to minority rights but be subject to what Mr Andrzej Olechowski, Poland's foreign minister, described as "accepted

# Rexrodt outlines EU presidency plans

By Quentin Peel in Bonn

Germany will seek to extend its own campaign for international competitiveness to the whole of the European Union this year, including promotion of more flexibility in labour markets, and a concerted push for deregulation.

That was the strategy out-lined yesterday by Mr Günter Rexrodt, economics minister, for the forthcoming six-month German presidency of the EU. He set out a five-point economic programme focused primarily on free-market policies to stimulate growth and counter unemployment, including a controversial proposal for an independent team of business experts to test all EU regulations for unnecessary burdens on companies and

The idea for an independent working group, sharply criticised by Mr Jacques Delors, European commission president, is the main plank of Mr Rexrodt's deregulation initia-tive intended to slim the Brussels bureaucracy.

At the same time he is proposing a concerted push to implement the EU action plan for job creation and growth, concentrating on promoting more flexibility in labour markets, and improved tax incen-tives for job creation.

He promised a push to remove national barriers to a single energy market in the 12 member states, both for gas and electricity, intended to give consumers and distributors: access to competitive

He proposed steps to speed the creation of an integrated information network in the EU, reducing legal barriers to the exchange of data and information, and encouragement for private initiatives to extend information networks on the basis of private financing. The fifth element in his pres-

We J'Eff the most complicated

technology in the simplest way

Mr Günter Rexrodt: five-point economic programme

idency strategy is to provide greater market opening for the states of central and eastern Europe.

That would include the conclusion of free trade agreements with the Baltic republics during the second half of the year, and a Europe agreement with Slovenia.

Chairman of DIXONS

Cardmember since 1971.

Mr Rexrodt said that formal EU membership negotiations with Poland and Hungary, the two central European states to submit formal applications, could only begin once the EU itself had agreed on the next round of institutional reforms scheduled for 1996.

In the meantime, further

needed, and restraint on the part of the EU in instituting anti-dumping and other protection measures against the central and east Europeans.

Mr Rexrodt's strategy is one element of a concerted German presidency programme still being finalised by the various German ministries, before Bonn takes over the EU presidency on July 1.

The six-month period will involve the installation of a new European parliament and the approval of a new European Commission, including a redistribution of Commission portfolios - all matters of acute political sensitivity.

Apart from the economic strategy, the presidency will focus on developing common foreign and security policies, and preparing the ground for the 1996 inter-governmental conference on institutional

# Renewed aracnma pressure expected

By Kerin Hope in Athens The Greek drachma may come

under heavy pressure today as speculation mounts that the government will be forced to trim interest rates next week. It declined against the D-Mark yesterday, closing at Dr150.1, against Dr147.5 the previous day. It was also down against the US dollar, closing at Dr246.4 (Dr244.4). Dealers said the central bank spent about \$300m to support the

currency yesterday, its first large intervention this week. The bank is estimated to have lost around 15 per cent of its foreign exchange reserves dur-ing the two-week battle to defend the drachma. However, yesterday's decline indicated the government

intends to ahandon its "hard drachma" policy and allow the

currency to depreciate at a fas-

ter rate than the 7-8 per cent projected for this year. This would relieve pressure which has shown no sign of abating since the government lifted capital controls on May 16. At the same time, it would enable the governing Socialists to avoid the heavy political cost of a formal devaluation just before the European

parliament elections.

One dealer said: "It's clear that short-term interest rates of over 100 per cent have been asphyxiating the banking system and faster depreciation is one way to bring them down." Short-term rates have been fluctuating between 70 and 500 per cent. The overnight borrowing rate this week reached 300 per cent, creating serious liquidity problems for smaller banks.

In an effort to inject some liquidity into the system, the central bank is to hold a swap auction today for the first time in more than two years. This will allow banks to borrow drachmas against foreign currency from the central bank at lower rates than those prevailing on the inter-bank market.

The liquidity squeeze, which has forced banks to raise corporate lending rates above 40 per cent, is also threatening government revenues, as companies are preparing to postpone VAT payments due at the end of the month in order to maintain cash-flow.

**EUROPEAN NEWS DIGEST** 

# Finns set date for referendum on EU entry

Finland yesterday decided to hold its referendum on European Union membership on October 16, making it the first of the three Nordic applicants to hold a vote on the Issue. Sweden holds its referendum on November 13 and Norway on November 15 and November 15 and Norway on November 15 and November ber 28. The east-west voting sequence is seen as the best way of getting all three countries into the EU because support for nembership is strongest in Finland and weakest in Norway. Public opinion in both Sweden and Norway remains against membership, although polls show the "yes" vote increasing if neighbours vote in favour. The three Nordic states and Austria are siming to join the union next January.

The choice of October 16 represents a setback for Mr Esko Aho, Finland's prime minister, who had wanted the referen-dum to be on the same day as Sweden's. But he was opposed ident Martti Ahtisaari and the Conservative party, the second largest in the coalition government. They both wanted September or early October. Mr Aho's Centre party is split over Europe as much of its support comes from the farming community; agriculture has become the main issue in the lebate because farmers face overnight adjustment to EU price levels. The government yesterday tried to soften the blow by announcing a support package for the farming and food processing industries. Christopher Brown-Humes, Stockholm

### Swedish interest rate switch

Sweden yesterday revised its system for steering short-term interest rates in an effort to achieve greater flexibility in monetary policy. The move, which brings Swedish practice in line with that of other European central banks, coincided with a marginal reduction in the country's main interest rate. which fell from 7 per cent to 6.95 per cent. Under the new system, the Riksbank, the central bank, will replace its key marginal rate with a repurchase (repo) rate as its main interest rate policy instrument. The repo will lie between a lending rate and a deposit rate following the German practice where the discount rate acts as a floor and the Lombard as a ceiling for interest rates. The Riksbank has fixed the lending rate at 7.5 per cent and the discount at 6 per cent, with effect from June 1. The repo rate will be 6.95 per cent. Markets reacted positively to the news, marking bond yields lower and the krona higher. Christopher Brown-Humes

### Bosnian factions end talks

International mediators yesterday ended two days of talks with Bosnia's warring factions with no apparent agreement on the future division of the former Yugoslav republic. However, sources close to the talks in France said leaders of a new Moslem-Croatian federation and rebel Bosnian Serbs had agreed to meet again with a "contact group" from the US Russia and the European Union in a week to 10 days' time. They said the talks, at which the factions did not meet face-to-face, focused on the curve-up of territory between the federation and the heavily-armed Serbs, who currently control 70 per cent. Earlier the Croatian news agency reported that the Croats and Moslems had "partly accepted" a mediators' proposal giving them 51 per cent. Reuter, Sarajevo

### Estonia in banking advance

Estonia has become the first of the former Soviet states to introduce electronic banking. Economic reform throughout the region has been hobbled by its antiquated banking system. Transactions can take more than three months, forcing many businesses and individuals to resort to cash and barter deals. Estonia, which in 1991 launched the most radical market reform programme in the region, has now entered the elec-24 hours a day were opened last week and tens of thousands of citizens have been invited to apply for credit cards which are already accepted by more than 250 Estonian merchants. Credit cards are commonplace among the Soviet Union's lavishly wealthy but tiny elite. However, Estonia is the first former Soviet republic to bring credit cards and cash machines to the masses. Chrystia Freeland.

### Bank fends off escudo attack

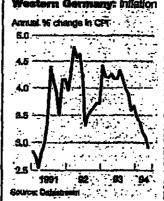

Pressure on the Portuguese escudo eased yesterday after the central bank intervened on the foreign exchange market to protect the currency from a second attack by speculators in less than two months. The currency fell to a low of Es104.5 to the D-Mark on Wednesday from Es103.2 and rallied yesterday to close at Es104.0. Overnight money market rates rose from 11 per cent before the attack to 30 per cent yesterday but fell back to 12 per cent as speculation against the currency sub-sided. After announcing large purchases of escudos on Wednesday, the central bank changed tactics yesterday by suspending its money market intervention and emergency lending rates. Peter Wise, Lisbon

### Abortion vote in Germany

The German parliament yesterday narrowly approved a law which proposes prison sentences of up to two years for people who encourage an abortion. The 264-260 vote in the lower house of parliament marks the latest chapter in the bitter feud about how to reconcile differing abortion regimes in east and west Germany. The new law, which will be debated in the Bundesrat on July 8, allows abortion up to the 12th week of pregnancy if the mother has been to a series of legal, social and medical consultations laid down by the constitutional court last year. Michael Lindemann, Bonn

ECONOMIC WATCH

### W German inflation below 3%

Western Germany: inflation Germany sank below 3 per cent in May for the first time in more than three years, the federal statistics office reported yesterday. The provisional figure of 2.9 per cent for the annual rate of increase in consumer prices in the west confirms a steady trend which has seen the rate come down from 3.4 per cent in January and February, to 3.2 per cent in March and 3.1 per cent in April. The figure is the lowest since April 1991, when it was 2.8 per cent. Since then it has been fuelled

by a series of high wage rises, reaching an average of 4.2 per cent for 1993 as a whole, the highest rate since 1982. Economists now expect a continuing decline during the year, thanks to a series of moderate ware increases in the latest pay round. Mr Hans Tietmeyer, Bundesbank president, has forecast that it will fall below 2 per cent early in 1995. Quentin Peel, Bonn

■ Finland's central bank yesterday adjusted its tender rate, the key rate governing commercial banks' borrowing with the central bank, to 5.1 per cent from 4.92 per cent. The rate was last changed on May 9, when it was lowered to from 4.95 per

■ Italian wage inflation stood at an annual 2.5 per cent in April after 2.4 per cent in March, the national statistics office said. The April rise compares with an annual growth of 4.1 per cent in consumer prices the same month. ■ Norway's registered unemployment rate fell to 4.8 per cent in late May from 5.1 per cent at the end of April, the country's labour directorate reported.

# Failure in steel crisis undermines Van Miert

By Lionel Barber and Emma

南京なる

Once he was acclaimed as the rising star of the European Commission. But less than a week after his surprise announcement that the Commission's 18-month-old rescue plan for the steel industry was "dead", questions are mounting about the political judgment of Mr Karel Van Miert. Belgian commissioner responsible for competition policy.

Senior officials and fellow commissioners are confused by Mr Van Miert's decision to wash his hands of the steel crisis, and irritated that he remains unwilling to consider a new compromise.

In Brussels yesterday, Mr Van Miert offered little hint that he is ready to resume his role as co-architect of the steel plan, along with Mr Martin Bangemann, industry commissioner.

Privately, he is said to be still fuming over his defeat at a meeting of the Commission last Wednesday.

Insiders say there were few signs of trouble when Mr Van Miert started with an appeal to allow the Italian government to provide state aid for the restructuring of the privately-owned Bresciani steel mills in northern Italy. In his view, the Italian reductions were the last hope of approaching the rescue plan's target of a 19m tonne

cut in capacity. However, Sir Leon Brittan, the EU's chief trade negotiator and a former competition comnumissioner, said that the deal would be difficult to reconcile with European law. A second significant intervention came from Mr Peter Schmidhuber, the German budget commis-

Mr Schmidhuber, a lawyer who usually votes with Mr Van Miert on competition matters, asked questions over Italian government funding, which Mr Van Miert was unable to answer. The competition commissioner was outvoted 11-4.

What followed was either a tantrum or a tactic aimed at pressuring industry to come up with fresh cuts in capacity. "The plan is dead," Mr Van Miert declared, "it is obvious we are not going to get near the target. But don't blame us.

Van Miert made several errors. First, he underestimated the legal difficulties of the Italian case, while overestimating how far he could push his (often successful) pragmatic approach to competition policy.

Second, he (and Mr Bange mann) failed to grasp the risks of a high-profile Commission intervention to tackle the steel industry crisis.

Third, Mr Van Miert may have not been flexible enough about the 19m capacity target. Some officials believe that an improving steel market may have rendered the figure obsolete - particularly in the light of the private sector's continned reservations about the rescue plan. On the other hand. any move to abandon the 19m target would call into question the entire plan.

What is to be done? One approach would be to proceed under Article 95 of the European Steel and Coal treaty which would allow state subsidies to be paid to companies. But this would require unantmous support from the Council of Ministers, a long process

with a dubious outcome. Whether Mr Van Miert changes course once again will depend on his own state of mind. Colleagues say they are baffled by his recent outburst. though one explanation is that he fears Mr Jean-Luc Debaene Belgian prime minister, will succeed Mr Jacques Delors as president of the next European Commission – an appointment which would cost him his job.

THE THURSDAY

which reads "on strike", one of 2,000 nurses who protested in Paris

# A fox among the Socialist pussycats

Nicholas Denton on Gyula Horn, a one-time hardline communist heading for power in Hungary and espousing orthodox economics

Sunthreatening are Hungary's Socialist party leaders that a liberal weekly catchlined its cover picture of them with the phrase "Pink

pussycats". That was after the former communists took a commanding lead with 33 per cent of the vote in the first round of this month's parliamentary elections. Now the Hungarian Socialist party is poised for a landslide in the run-off vote this Sunday. The Socialists are sure to be the largest party.
The only question is whether
they will have an absolute

Socialist politicians, although emboldened by their success, are still purring soothingly. They reject a return to the past, revenge against the conservatives who have governed Hungary since 1990, and reversal of conservative policies such as compensation for property expropriated by the former regime. There is little socialism in

the party programme, let alone red-toothed communism. Socialists largely share the broad political consensus European Union and Nato. A westerner commented to Mr. Laszlo Bekesi, the left's ecoorthodox economic programme could have been that of a rightwing party in western Europe. "Thank you," Mr Bekesi

The revamp of the Socialist party encompasses more than policy pronouncements. Mr Attila Agh, a political scientist and founder of the party in 1989, says the average age of Socialist party members is 40 and only about half of them were formerly communists. It gives the Socialists some right to be irritated by the label of "former communists" that sticks to them so persistently. But one, rather distin-

guished, Socialist cannot escape the description so easily: Mr Gyula Horn, 61-year-old party leader and most likely the next prime minister or at year least the next prime behind very least the power behind the premiership. Mr Horn was not in the photo of the "pink possycats" because he was in bed in bospi-

tal at the time, his neck in a brace, recovering from a car accident on the eve of the first round of voting. But the cap-tion does not suit him anyhow. The chain-smoking Socialist leader's age and demeanour are in sharp contrast not only to those of the younger vice-presidents of the party. His

o smiling, youthful and nomic expert, that the Socialist Polish counterpart, Mr Alek-unthreatening are Hun- orthodox economic programme sander Kwasnieski, 40-year-old leader of Poland's SLD, wields a mobile phone and is more of a yuppie than a reconstructed

> Mr Horn went to college in Rostov in the former Soviet Union and speaks Russian rather than English at international conferences. More embarrassingly, he wore the trademark "padded jacket" of the volunteer militia which helped put down the 1956 uprising against communist

> You've got blood on your padded jacket," charges the graffiti on his election posters and a conservative newspaper editor called Mr Horn a "poten-tial killer". Government-run state television was more spe-cific, accusing the Socialist leader, without firm evidence, of kicking in the teeth of a counter-revolutionary prisoner. Those who knew Mr Horn

later, in the early 1980s, when he was rumber two at the foreign department of the central committee remember a "typical product of the party sys-tem". "I wouldn't say he has changed very much," says one. Mr Horn certainly still has the toughness of a hardened veteran of Communist party infighting. He is notorious for

cutting interviews short if he does not like the line of questioning. He doffs his hat to no one. At a recent speech to foreign investors in Budapest, the Socialist leader seemed close to boredom, looking out of the

window as he was speaking. Socialists prefer to skip quickly over Mr Horn's early career to linger on his achievements as foreign minister in the last communist government in 1989. He was the man who went to the western frontier with Austria and took the wire-cutters to the Iron Curtain; Mr Horn, in biblical fashion, set the east Germans free, allowing them to escape to the west through Hungary; and he began negotiations with Moscow on the withdrawal of

Soviet troops. So which is the real Gyula Horn? He himself offers few clues. The Socialist leader says he has traversed the political spectrum from communist to reform communist to socialist but avoids any more precise expression of his political beliefs. "I view ideology as a private matter for people and it should not play a part in poli-tics," he says. It is statements like these which lead the Socialists' opponents to describe them, not as communists, but as nibilists, believers

Gyala Horn: skilful operator

in nothing A western diplomat gives another slant to Mr Horn's pragmatism. "He is not philosophical at all. Obtaining and exercising power is what he likes. He's very bright, he's quick and he sees all the angles on things. The question is whether he loves democracy

It may not be a question of love. Mr Horn adapted successfully to Stalinist oppression, reform communism and the upheavals of 1989 and 1990. He is just as skilful an operator in democracy: opinion polls consistently judge him Hungary's most popular party leader. Mr Lazlo Lengyel, a leading politically in the control of the cont ical commentator describes him, not as a pussycat, but as

or not."

# Bank threatens to seize Tapie's **furniture**

Mr Bernard Tapie, the French politician and entrepreneur, yesterday came under mounting financial pressure when Crédit Lyonnais, his bank, threatened to seize his furniture and Paris townhouse unless he repays FFr450m (£52.4m) of his FFr1.22bn debts.

The threat follows a farcical sequence of events last week after the bank announced it was terminating its five-year debt repayment agreement with Mr Tapie, a member of parliament whose political star has risen with the success of Energie Radicale, his populist left-wing movement, in the European election campaign.

Crédit Lyonnais last Friday sent a bailiff to make an inventory of the contents of Mr Tapie's townhouse, only to be informed by its own private detectives that some of the most valuable objects had been removed the previous day. Mr Tapie claimed that he had lent his mother-in-law a few favourite pieces of furni-

However Mr Tapie's prob-lems mounted this week when a Paris court asked for his parliamentary immunity to be lifted so he can be investigated

... Ē

for tax fraud concerning the purchase of his luxury yacht, the Phocea. The tax investigation was the final straw for Crédit Lyonnals, which said it feared that its claim on Mr Tapie's assets could be weakened by calls from other creditors, notably the tax authori-

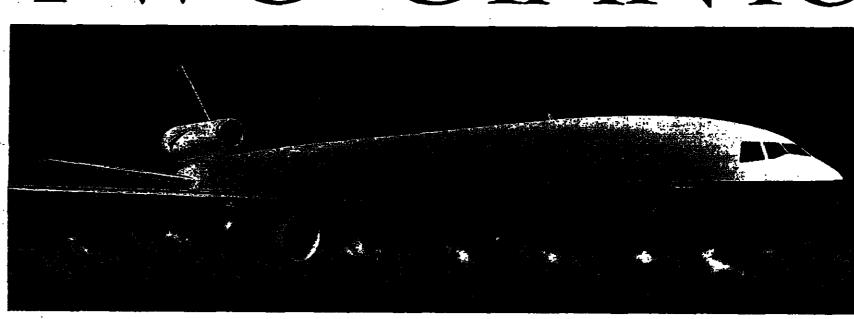

The bank demanded that Mr Taple by next Thursday repay FFr450m of his debts, FFr100m of which was lent to him to

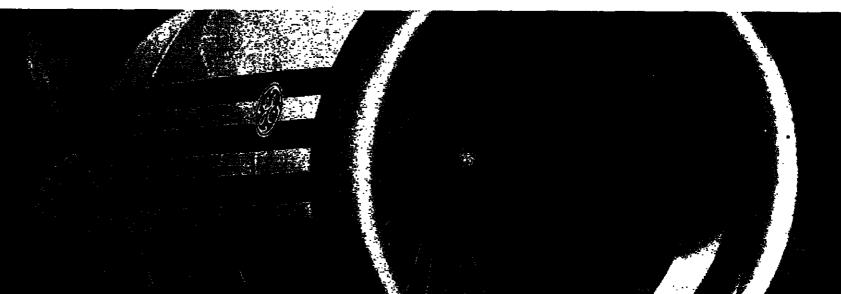

buy the Phocea.

If he fails to pay, Credit
Lyonnals will on the following day start legal proceedings to seize his furniture and to order the sale of his opulent townhouse off Boulevard Saint-Ger-

Mr Tapie has described Crédit Lyonnais's threats as part of an establishment plot against him. He said yesterday he had instructed his lawyers to "do everything pos-sible to protect my legal

So far Mr Tapie's financial and legal problems have helped, rather than hindered his progress in the opinion polls. Energie Radicale has continued to gain ground from the established left-wing parties and now commands 10 per cent support.

These days the Welsh Dragon is a real high flyer since two international giants of the aero engineering industry chose Wales.

# aims to double arms exports

By Patti Waldmeir and Mark

South Africa hopes to double arms exports over the next year following the lifting of the United Nations arms embargo, which spurred previous governments to develop a sophisticated arms manufacturing

industry. Mr Tielman de Waal, chief executive of Armscor. South Africa's arms procurement agency, said yesterday the company could boost defence exports by more than R1bn (\$270m) in the current fiscal

His statement comes against a background of calls for sharp cuts in the defence budget to fund new spending on social services under President Nelson Mandela's reconstruction and development programme. Armscor is keen to demonstrate the defence industry can generate as well as consume South Africa's scarce resources, and can earn foreign exchange from goods which

are globally competitive. Armscor has come under increasing criticism since the new multi-racial government took over a fortnight ago, reflecting a new public awareness of moral arguments

against arms exports. Mr de Waal noted, for example that South Africa sold a variety of weapons - rifles, grenades, mortars - worth R100m to Rwanda over a five-

year period He said the deal was terminated late last year because of evidence the weapons were used against the Rwandan people. In recent weeks, Rwandan Hutus loyal to the government have been blamed for horrific

Mr Peet Smith, Armscor general manager for imports and exports, said the new govern-ment's policy permitted arms exports to countries only to defend their sovereignty and not where the weapons might

be used to violate human

Despite anxieties about exports to the rest of Africa, South Africa's urgent need for foreign exchange earnings, coupled with a desire to capitalise on heavy spending on research and development during the apartheid era, will probably combine to protect

Armscor's activities in future. Selling more of its respected military hardware is the key to Armscor's survival. Mr de Waal said. The company currently more than R800m of arms per year, which he said represented less than 0.5 per cent of the international arms

Products that could sell well abroad include sophisticated Rooivalk helicopters, frequency-hopping radio transmitters and receivers that avoid interception. landmine-proof armoured vehicles, advanced mine detection equipment, and G-5 and G-6 long-range artil-

Mr de Waal identified Asia, the Middle East, Africa and Europe as potential markets. This will be eased by Tuesday's UN Security Council decision to lift a mandatory ban on the sale of arms to South Africa.

President Mandela said this week Pretoria should be allowed to sell weapons if it wanted to and Defence Minister Joe Modise, a former guerhave been blamed for horrific slaughters of minority Tutsis and other Hutus that killed 20,000 jobs.

# Patten sees a new Manchester in the east

By Alexander Nicoll,

Mr Chris Patten last night forecast a "spectacular future" for Hong Kong provided that the 1984 Sino-British Joint Declaration, under which the territory will return to Chinese sovereignty in 1997, is

Speaking in Manchester's Great Hall, he said: "It will play the role in relation to the Chinese economy which Manchester played in the British industrial revolution and which New York played in the opening up of the American

But if the 1984 accord was not fully implemented, he said, the characteristics which made Hong Kong special would be in jeopardy. These, he said, were "the rule of law. a free press, a high level of

resistance to corruption".
"Hong Kong will no longer be special and the potential offered by the historic 'one country, two systems' concept will have been squandered."

Mounting a spirited defence reform, he poured scorn on suggestions - made by British businessmen and former diplomats – that Britain should opt for a "quiet life" since its longer-term interest was in having good relations with China.

Britain, he said, had huge investments in Hong Kong and large exports. "Securing Hong Kong's future, which is dependent on its special nature enduring indefinitely, is a clear national interest." Moreover, he said, there was "a unfair trade advantage."

Chris Patten: spirited defence

place for integrity as well as interests in foreign policy". Hong Kong – like Manches ter, the governor said - had grown on the basis of free trade and open markets. But he detected growing protectionism in Europe and the US. Some in Europe sought to jus-tify protectionism on the grounds that poorer countries did not have the same social infrastructure as Europe. "This amounts to the absurd and callous proposition that to be poor is somehow to have an

# South Africa | Algeria to hear price of debt rescheduling 3 Francis Ghilès previews talks next week with the Paris Club of official creditors

Algeria will meet its chief western creditors in Paris next Tuesday to discuss the terms under which it will reschedule the \$14.5bn of its foreign debt that it owes to foreign govern-

The principal debt repayments to be covered fall due between April I this year and March 31 next, the period covered by the standby agreement Algeria reached with the International Monetary Fund last month, due to be approved by its board today.

The repayments amount to an estimated \$3.4bn, to which the Algerians might wish to add \$800m in interest payments due over the next year. Repayments would be spread over 15 years with eight years'

Algeria last reached agreement with the IMF three years ago. But circumstances have changed. The country's economy has deteriorated sharply as a result of the bloody civil strife which followed the suspension of elections the Islamic Salvation Front was poised to win in January 1992, the decline in the price of oil and the government's decision to reverse gear on reforms aimed at liberalising the economy launched in 1989 and suspended late in 1991.

The new IMF agreement envisages a standby loan of \$625m and contingency financing of \$375m, extended because of the decline in the price of oil. Hydrocarbon exports account for more than 95 per

Algerian debt: changing circumstances

25 Cil rebich SA Ban be

cent of Algeria's foreign

included in the agreement and already implemented are: A devaluation of the dinar. It is not clear whether further devaluations are required beyond the 40 per cent devaluation against the US dollar on April 10, the date the IMP received Algeria's letter of

 Dismantling the state monopoly on foreign trade. This has already led to the abolition of the ad hoc ministerial committee which, since July 1992, has alone been entitled to decide on all requests for imports. Discrimination against imports by the private sector, which have been such a feature of the past two years, have been abolished. Exporters will be allowed to retain 50 per

cent of earnings, in foreign currency accounts in Algeria. Adjustments in the price of food and energy prices which were raised by 40 per cent before the dinar was devalued. Three key foodstuffs, semolina, flour and milk, have been

 Liberalisation of prices of farm inputs and fertilisers. Foodstuffs imports accounted for 25 per cent of last year's total import bill of \$9.5bn. The stabilisation programme aims to reduce the budget defi-

cit as a percentage of gross domestic product from last year's figure of 9.2 per cent to 3.3 per cent. One third of last year's budget deficit was accounted for by funds aimed at recapitalising loss-making state enterprises which were not restructured. The agreement also includes

measures aimed at reducing monetary growth from 21.2 per and at containing salary increases, a sensitive issue because the support of the trades union movement is seen as crucial in the battle against radical Moslem groups.

Overall, the aim is to contain inflation to 30 per cent. Last year, inflation was officially measured at 20.8 per cent, a figure widely considered an underestimate, and was worsened by constant shortages and siphoning off into the black market of basic products. In a broader sense, the agreement with the IMF aims to turn a real decline in gross domestic product of 2 per cent

last year into a rise of 3 per cent in 1994 and 6 per cent in 1995, thus increasing capacity utilisation in industry which

was 50 per cent since 1990. Servicing its \$24.7bn foreign debt, virtually all of which is medium and long-term, last

year represented 86 per cent of

Algeria's export earnings, a fig-

ure it hopes to bring down to

less than 30 per cent. After the talks with its Paris Club creditors, the Algerians will ask to meet their commercial hank creditors. Japanese hanks, which hold more than half Algeria's commercial bank paper, are known to be unhappy about the prospect of duling but are playing their cards close to the chest.

Overall, the restructuring should bring in \$3.7bn from official creditors and \$600m from the commercial banks. The Algerians hope that the level of export credits does not fail far short of \$3bn. The European Union will commit

Ecu350m (2270m). Ecu150m of which is accounted for by the second tranche of a loan extended in September 1991.

The balance should be made up of World Bank and other multilatural agency lending. The second tranche, worth \$325m of a joint World Bank-Jerim co-financing estmarked to reform the banking sector could be drawn down quickly. Mr Ahmed Benbitour, the Algerian minister of finance. ted, to an interview, that 'quick disbursement was vital to ensure that the liberalisation of foreign trade proceeds smoothly and that the exchange rate is kept steady. He expressed confidence that \$1 hn would be dishursed by the IMF, the World Bank and the EU before the end of June.

The attitude of the French government to Algeria's debt problems has, over the past three years undergone a ible transformation. In 1991, Paris showed little enthualasm, let alone consistent sup port, for the government of Mr Mouloud Hamrouche, which brokered the boldest economic and political reforms ever wited in Algeria Today, lead ing French ministers spare no effort in their support for the Algerian regime. The French foreign minister, Mr Alain Juppe, brought up the issue when he met US President Hill Clinton recently.

French policy however is driven as much by fear as by any hope that the IMF package

# **US** sends famine mission to E Africa

President Bill Clinton said yesterday he was sending a conditions in East Africa, where a possible famine could 20m people, Reuter reports from Washington.

A White House statement said Mr Clinton had asked Mr Brian Atwood, administrator of the US Agency for International Development, to head the bipartisan delegation including members of Congress and private organisations. The group would try to pre

vent mass starvation in Ethiopia, Eritrea and Kenya by investigating and then raising and co-ordinating more help from global organisa

"The crisis in the east Africa region threatens every nation in the region and is caused by drought conditions and civil conflicts," the White House statement said. "At this early stage, it is still possible to avoid widespread famine, but an estimated 20m people are currently at risk and may have to leave their homes to search for food."

It said concerted regional and international action two years ago prevented a similar drought in southern Africa from becoming a severe fam-

"Our effort to head off the inciplent famine will be both short- and long-term and will help the nations of the region address what have become chronic food shortages

The delegation is to examine programmes sponsored by the US government and other donors in Ethiopia, Eritrea, and Kenya, and meet heads of state and government repre-

The current delegation will travel to Rome, Geneva, and Brussels to seek increased aid for east Africa. The White House said it would meet officials of the World Food programme, the Food for Agriculture Organisation, the UN High Commissioner for Refu-gees and leaders of the Euro-

Rwanda militia pose for a picture at a check-point in Kigali yesterday. An estimated half million people, mainly of the Tutsi tribe and opponents of the government, have been slaughtered in massacres blamed on such Hutu militia and government troops

# Peace talks unlikely to heal Cambodia's wounds

Many think neither Phnom Penh nor Khmer Rouge wants a solution, Iain Simpson writes

ne year ago this week, the UN effort to bring peace to Cam-bodia reached its climax as more than 4m Cambodians braved monsoon rains and the threat of Khmer Rouge violence to vote in the country's first free election.

Today, despite widespread optimism among voters that they were casting their ballots for peace, the government is still fighting a low-intensity war against Khmer Rouge guerrillas who show no sign of giving up their

struggie to retake power. The three top government leaders are due to arrive in Pyongyang, the North Korean capital, today for peace talks with the Khmer Rouge. It is the first time the two sides have met for almost six months. But few in Phnom Penh expect the talks will bring much

sporadic fighting continues in western Cambodia, where 50,000 people have been forced out of their homes by artillery barrages from both the Khmer Rouge and the government.

Aid workers say the future now looks bleak for many whose homes are in what is now a combat zone, whose prospects of returning to their villages in time to plough their fields for this year's rice crop are slim.

Many Cambodians believe neither the government nor the Khmer Rouge is seriously interested in the search for peace. For the government, an end to war would bring new problems if it finally faced up to the need to demobilise almost half its armed forces.

While they are fighting, the government can justify spending more than 35 per cent of its budget on defence.

Once the fighting stops, the figures are likely to be scrutinised more carefully by multilateral donors such as the IMF, which has just approved a new \$120m (£79.4m) soft loan. For the Khmer Rouge, any peace

settlement would have to include giving up their guerrilla army and the territory they control, tantamount to giving up their struggle. Some analysts believe the guerrillas are fighting only to improve their bargaining position ahead of talks; others say they aim to take complete control of Cambodia again.

In recent fighting, the Khmer Rouge have shown they can defeat government forces with apparent case. Military officials say the reason for the guerrillas' successes was the national army's incompetence, rather than the strength of the Klumer Rouge.

Even during that recent run of victories, the Khmer Rouge did not manage to capture the town of Battambang. With a strength of 10,000-12,000, the faction is unlikely to be able to capture, far less hold, any significant

towns. Ministers are still trying to persuade their allies in the west and South-East Asian countries to provide them with lethal military aid, fuelling the suspicion they have no interest in reaching a peace settlement with the

ome diplomats believe King Norodom Sihanouk, head of state, is alone in pushing for talks and a deal to bring the Khmer Rouge into the government in exchange for a ceasefire and relin-quishing the 10-15 per cent of the

country the guerrillas control. Mr Hun Sen, junior prime minister, said he was "less than 0.1 per cent optimistic" about any progress during the five days of talks. On the government side, Mr Hun Sen is the main stumbling block to a deal with the Khmer Rouge. Senior prime minister

Prince Ranariddh, also the son of King Sihanouk, has shown he is willing to make peace with the Maoist guerrillas. Late last year, Prince Ranariddh twice flew to Bangkok for talks with

the nominal leader of the Khmer Rouge, Khieu Samphan. During these meetings, the two men discussed terms for a ceasefire. But each time Prince Ranariddh returned emp-ty-handed. Few in Cambodia believe he will be any more successful this

# S Yemen in push to reclaim territory

in Aden and Robin Allen in Dubai

South Yemeni military officers have launched a counter-offensive to reclaim territory lost to northern forces during the past three weeks' fighting, they said yesterday. Caught unprepared for war, they claimed the south was now ready to break out of its defensive posture.

The southerners were yesterday clearly in control of the region surrounding the key airbase of al-Anad, some 45 miles north of Aden, as they continued to pound the base. Southern officers said there was no return artillery fire and claimed the northerners were in retreat

Apparently frustrated by the failed advance on Aden, northeru leader Gen Ali Abdullah Saleh has opened up a new front in Shabwa Province, 240 miles north-east of Aden.

His aim, southern leaders say, is to capture their oil fields at Wadi Masila, about 280 miles to the east. Run by Canadian Occidental

Petroleum, the Masila Fields produce 150,000 barrels a day, the south's economic main

Southern leaders were apparently unruffled by the challenge, saying northern forces are over-extended and vulnerable to a counter-

Mr Ali Salem al-Beidh's southern leadership is starting to fill positions for the new cabinet. Prime minister-designate is Mr Haider Abu-Bakr al-Attas, prime minister of the former united Yemen before the south declared secession at the end of last week. The defence minister is expected to be Gen Haithem Qassem Taha, chief of staff of the southern

New or confirmed appointments for provincial governors include Mr Ahmed Farid, owner of a Muscat-based contracting company, Desert Line Projects. Mr Farid's family comes from Shabwa, where last February be led a wellpublicised movement to oust northern units from the governor's office.

Members of the presidential council, apart from Mr al-Beidh, include Mr Salem Saleh Mohammed; the head of the Sons of Yemen League, Mr Abdul Rahman Ali al-Jifri; the former head of the Front for the Liberation of Occupied South Yemen (Flosy), Mr Abdul Kawi Makawi; and Mr Spleiman Nasser Masoud.

Mr al-Jifri was an adviser to the former Sultan of Lahel before the British withdrew in 1967. Mr al-Jifri has spent the past 24 years managing a construction company in Saudi Arabia. Mr Makawi is an Adeni and a former trade union leader who has lived in Cairo for the past 20 years. He was prime minister for a time under the British-inspired South Arabian Federation before leading the militant anti-British Flosy.

# Gabon is first to reschedule its debts

Gabon has become the first member of the African "franc zone" to reschedule its commercial debt with all its externai creditors, Peter John country's FFr17bn (\$30n) restructuring programme was put in place yesterday when Finance Minister Marcel Doupamby Matoka signed an agreement in Paris with the London "club" of commercial

benik creditors. The deal, repayable over 10 years, represents some \$170m of debt. Gabon has already signed agreements with the Paris Club of sovereign creditors and the international Mon-etary Fund. Mr Thierry Desjar-tims of BNP, the French bank which officiated at the signing, said the move would boost the country's credit rating.

ability to borrow when it is adjusting to the 50 per cent devaluation against the French franc by the zone's 14 member countries in January. The devaluation was one of the IMF's principal conditions of the debt rescheduling deal. BNP is starting talks with Ivory Coast, Congo and Cameroon over their final restructuring. The talks are likely to be more protracted as these coun-

tries have a far lower GDP per

head than Gabon, one of

It is expected to ease Gabon's

### Africa's oil-producing countries and a big dollar-carner. Bond is back in hospital

Mr Alan Bond, the Australian businessman, was back in hospital yesterday after a near-collapse during a brief appearance in Perth Magistrates Court. Nikki Tait reports from Syd-

According to Mr Andrew Fraser, Mr Bond's solicitor, doctors suggested that the former tycoon, whose empire started to collapse under a pile of debts in the late 1980s and who filed for personal bankruptcy in 1992, was showing signs of the beginning of s stroke. His lawyers had applied to suspend a preliminary hearing over four art fraud charges

### Ousted Hewson takes shadow post

Mr John Hewson, ousted as leader of the Australian opposition Liberal party this week, stays on as industry spokes-man in a 32-member shadow cabinat, Nikki Tait reports.

Mr Alexander Downer, who

took over from Mr Hewson as opposition leader on Monday, announced the new slimmed down line-up yesterday. His deputy, Mr Peter Costello. becomes shadow treasurer. Mr Andrew Peacock and Mr John Howard will shadow foreign affairs and industrial relations respectively.

Mrs Bronwyn Bishop takes the shadow health portfolio-The former senator was imped as a potential leadership contender until her showing in a hy-election earlier this year.

# **ECGD** restores cover for Brazil

The British Export Credits Guarantee Department said yesterday it had resumed export credit insurance cover for Brazil, after a gap of 11 years, Reuter reports.

The decision followed a suc-

cessful restructuring of Brazil's commercial bank debt and "encouraging progress with its economic stabilisation programme", an ECGD statement said.

"ECGD's restoration of cover for Brazil will represent a whole new area of opportunity for British business," said Mr Michael Heseltine, UK Trade and Industry Secretary. "Brazil is the ninth largest economy in the world and will be opening up even more now that the effects of the debt cri-sis are receding," he said.

Cover was withdrawn in 1983 after substantial payment delays. Limited cover was resumed in 1989 but was suspended almost immediately when Brazil again stopped

honouring its debts. ECGD said cover would concentrate on business with the Brazilian private sector. Some public sector organisations will be eligible if they can show their receipts of foreign exchange will cover payments.

The ECGD activities will be concentrated on business which promotes Brazil's economic rehabilitation.

"Brazil is the 14th country for which ECGD has resumed cover over the last two years. The significant increase in the number of markets on cover, together with increased availability of cover for major markets and reductions in premium, is giving British exporters greater opportunities to compete for business overseas, and demonstrates this government's commitment to support UK companies in their export efforts", the UK minister said.

In São Paulo: Brazil's inflation fell to 44.66 per cent in May, compared to last month, an official at the Economic Research Institute said. The index, calculated by the University of São Paulo, measures inflation at weekly intervals.

# George Graham reflects on the American initiative against a British glassmaker

# Washington's new anti-trust vigour

anti-trust order yesterday against Pilkington, the British glassmaker, marks one of the first concrete results of the new vigour in anti-trust enforcement promised by the Clinton administration.

The Pilkington suit - as a result of which the British company has agreed to end the restrictions it has imposed on licensees for its float glass technology - is the first big anti-trust suit brought in the US against a foreign company since 1992, when the department reinstated an old policy which had allowed it to undertake broad actions against overseas

In 1988, the Reagan administration's justice department had announced that it would pursue anti-competitive conduct in foreign markets only when

ment reached with the

The US justice department's there was seen to be direct harm to US consumers. The 1992 reversal allowed the US also to pursue conduct that had harmed US exports.

Besides marking a new aggressive ness - which has otherwise been symbolised mostly by the present justice department's determination to tackle the domination of the computer software industry by Microsoft - the Pilkington suit also carries echoes of the Clinton administration's broader goals on industrial and competitiveness policy.

The principal goal of the suit, the department said, was to allow US companies to compete freely in overseas markets, not so much for sales of plate glass itself but rather for the construction of an estimated 50 float glass plants which are expected to be built in regions such as eastern Europe and south-east Asia over the

"Before this case was filed, US firms basically would have been locked out of this market entirely. Now that this consent decree has been filed, and hopefully after it is approved, we think that as many as half of these plants could be built by US firms," said Mr Robert Litan, deputy assistant attorney-general in the depart-ment's anti-trust division.

r Litan said that the department had also challenged Pilkington's licensing agreements because ther were impeding innovation by US companies, since they restricted the benefits a licensee could reap from any improve-ments to the technology it had devel-

As a sign that the Clinton administration sees anti-trust enforcement as a legitimate policy tool for improving the efficiency of the US economy, rather than just a last resort against truly egregious examples of business collusion, the Pilkington suit could herald a number of new cases against

both foreign and US companies. Ms Diane Wood, who heads the international anti-trust division at the iustice department, said yesterday that the case would be regarded abroad as "a broad assertion of jurisdiction" by the US.

We won't bring these cases unless there is a big impact in the US market and the company is present here in the US," she said.

Anti-trust enforcement in general, under the Reagan administration of department investigations initiated under the major US monopoly. merger and restraint of trade acts dropping by half to two thirds of the rate during the Carter administration

of 1977-81. Under the Bush administration. which ended early last year, the number of enforcement actions dropped even further, although Mr William Barr, then the attornoy-general, took some steps to swing anti-trust policy

back to earlier principles.

Those steps included the 1992 reversal of the policy on the oversess reach of US action, a measure seen at the time mostly as a vehicle for attacking the cartel-like practices of Japan's keiretsu groupings, but now implemented for the first time against a UK

developed economies have become emerging markets. Debt reschedulings are being replaced by debt underwritings. Equity is not about fairness in allocating multilateral funds, it's about ADRs listed in the American public markets.

Against this backdrop, International Media Partners, publishers of Emerging Markets and parent company of the CEO Institutes; and INC Bank, the leading financial institution in emerging markets worldwide, have joined to establish two important new awards.

The Emerging Markets CEO of the Year Award will be given to two business leaders. The first will be the chief executive of a corporation headquartered in one of the world's emerging economies whose vision and company's perfor-

mance have best shown the pattern that can be offered as a model to other emerging markets companies around the world. The second to a chief executive of a company headquartered in the developed world whose expansion into emerging markets has shown

best how these markets can contribute significantly to corporate revenues and profitability. There are no industry or size criteria, though it is expected that the recipient of the award will be in charge of major business. The awards will be presented at a special Awards Dinner during the IMF/World Bank meeting in Madrid in October 1994.

An independent Selection Committee, comprised of corporate leaders, institutional investors, government officials and multilateral executives, among others, has been established to evaluate recommendations for the awards.

Nominations should be received by July 1, 1994. If you believe you have a candidate, please forward details to: Richard Burns, President, International Media Partners, The Cable Building, 611 Broadway, Suite 300, New York, New York, 10012. Telephone: 212 995 9595. Facsimile: 212 598 0788.

# Nafta accord back on Chile's agenda

Environment and labour issues are expected to dominate talks with the US, writes David Pilling

t was with more than a touch of bravado that Mr Eduardo Aninat, Chile's finance minister, announced earlier this month that a deal to join the North American Free Trade Agreement could be wrapped up by next March.

"What I did, on purpose, was to put Nafta on the front page again...to start the discussion,"

it worked: a Nafta deal, or at least a bilateral accord with the US - an issue largely dormant during the final period of the administration of President Patricio Aylwin - has reappeared at the top of Chile's international agenda.

Mr Aninat's crusade has

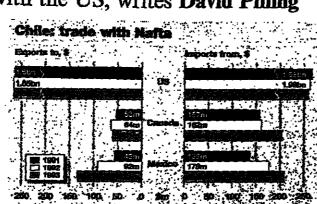

been much helped by the publi-cation in the US of a draft bill - sponsored by Mr Richard Gephardt, the Democratic House leader - seeking to initiate free trade talks with Chile under "fast-track" procedures. The bill seeks to bind provisions on workers' rights and environmental protection into the accord, rather than negotiating side agreements, as was done with Mexico.

Although this could imply tougher criteria for Chile, the initiative from Mr Gephardt, who opposed Nafta, is seen as a sign of potential cross-party support. No one doubts the offrepeated promise that Chile will be next.

None of this means, however, that informal talks, due to begin in Washington next month will be straightforward. "Negotiations will be much more difficult than people think," says a US official.

The environment is likely to prove the biggest sticking point. Chile's mining, fishing, forestry and fruit industries - backbone of the export sector - have been criticised on environmental grounds. Many older mines fall far short of international standards on disposal of hazardous by-products, while Chile still exports 100year-old trees in the form of

Mr Aninat recognises that

Farmers insist protective barriers cannot be dismantled

until the US government stops

For Mr Anmat, locking into the world's biggest economy has strategic implications. "We

feel that Chile, because of its

size and dependence on foreign trade and investment, cannot

remain isolated . . . The world

is walking away from multilat-

eral Gatt rules, unfortunately,

and more into regional trading

blocs. We need to get hooked

than the purely commercial. It

is keen that Chile, which it

regards as one of Latin Amer-

ica's most open and modern

economies, should be rewarded

for its progress. But it has yet to decide

whether it favours a bilateral

accord or Chile's joining Nafta.

Until that issue is resolved and

fast-track authorised, all talk

Indeed, Mr Aninat confides

that his March 1995 target is

"very optimistic" and "more a

signalling device than a real

bet". However, he believes

that, once formal talks start, negotiations should be much

quicker than those with

Mexico, which took two years.

Before this can happen,

Washington must turn fine words into action. This pro-

cess is like a tango, and you

need both parties to dance."

says Mr Aninat. "We cannot

start dancing on our own."

of timetables is premature.

into intelligent alliances. The US has wider objectives

which "frankly speaking, we do have some problems". On labour, he is more san-

Source: Control Bank of Citie

guine. Workers' rights were greatly strengthened under President Aylwin, after years of repression under military rule, and are now more protected than anywhere on the continent, he says. But other difficulties are likely to emerge as talks proceed, such as Chi-le's price-band system of surcharges on agricultural imports. Washington will also push for stringent measures to protect investments.

More tricky still may be the issue of intellectual property rights, particularly on pharma-ceuticals. Although Chile has recently tightened up its tent laws, it has not introduced protection for pharmacenticals being developed.

There are quite significant differences (over patents) which it will be very difficult for Chile to address in the short-to-medium term." says the US official. Mr Aninat is aware that negotiations on this topic will be "hard". Mr José Antonio Guzmán.

president of the CPC, Chile's main business organisation. said recently: "We are only prepared to make an agreeent with the US if it is beneficial for the country and if it doesn't impose environmental and labour clauses beyond our capacity." The CPC would oppose any deal damaging Chithe environment is an issue on le's ability to compete, he said.

Boycott ruling irks US Greens

By Frances Williams in Geneva

"It's a dialogue of the deal," signed one European trade official yesterday, referring to the outraged reaction of US environmental groups to the news that a Gatt panel has once again ruled against US trade measures intended to protect dolphins.

The panel report, circulated to the parties involved last Friday, says the US is not entitled under Gatt to use trade measures to force other countries to adopt its own domestic policies, environmental or otherwise. This, the report argues, would undermine the whole basis of the multilateral trad-

The US operates an embargo on time imported from countries which catch too many dolphins in tuna fishing nets. A secondary embargo applies to countries which import and process tuna from the offending countries. But to satisfy the terms of the US law, it is not enough to kill fewer dolphins; a country also has to adopt fishing methods which conform to those used by US fishing fleets.

The latest panel report,

which relates to the secondary tuna embargo, adopta somewhat different reasoning from its predecessor. The three-man panel says Gatt rules do not in principle disbar countries from using trade measures to protect "the global commons' or environmental resources outside their own jurisdictions. However, the panel argues, these measures have to be designed directly to protect the resource in question and need to satisfy the criterion that no other more Gatt-consistent measure is available. On both counts, it says, the US

embargo fails. Independently of the embargo, measures to protect dolphins have resulted in a steep drop in kills in the Eastern Tropical Pacific, where dolphins swim with tuna shoals, from over 100,000 a year in the mid-1980s to fewer than 5,000 last year.

# US alters China MFN stance

By Jurek Martin in Washington

Opposition to President Bill Clinton's decision to extend Most Favoured Nation trading status to China may depend on what non-human rights conditions are

attached.

An actual announcement, the presentation of which will be closely watched, was expected either later yesterday or today. The president ducked all questions on the subject during his early morning jog, but administration officials have made it clear that the central decision to de-link MFN and human rights had already been reached earlier this week.

The likeliest target for modest sanctions are Chinese-made guns and ammunition, cifically the SKS rifle, once in standard use by the Chinese army and throughout

Nearly 1m SKS guns were imported into the US last year by two Chinese trading companies with close ties to the Red Army, making it the fourth most popular weepon in the country, after three cheap handguns. SKS rifles were described in an article in the Wall Street Journal yesterday by a US government official as "high tech firearms at Saturday Night Special prices. A ban could therefore, be por-

trayed as part of the anti-crime drive. An embargo on an easily identifiable product would be easier to enforce than a broader proscription on goods made by Chinese state industries and prison camps, as demanded by some in Congress and as considered recently by the government.

the former eastern bloc. The ban on sales

of Chinese weapons in the US was lifted in

whip, warned yesterday Mr Clinton could whip, warned yesterday Mr Clinton could face a big fight in congress if he were not

"tough enough" with China.
The administration is resigned to the fact that it is certain to come under attack in Congress and human rights organisa-tions for backing away from the president's executive order of last June tying renewal of MFN to improvements in seven areas of Chinese human rights policies. Measurable progress has only been made

in two areas. Some of that sting may be drawn by the prospect of large US commercial contracts with China. Yesterday, for example, Boeing was obliged to deny comment on reports it was close to landing a Chinese order for over 50 airliners valued at over

# Farm row with Canada eased

The US has moved to lower the temperature in its acrimonious farm-trade dispute with Canada. Mr Jim Blanchard, US ambassador in Ottawa, made an unusual appearance on Canadian televi-sion to attack the increasingly aggressive tactics of Mr Mike Espy, US agriculture secretary, writes Bernard Simon in

Toronto. "I don't think he had anthority from the president and I don't agree with him." Mr Blanchard said, referring to recent efforts by Mr Espy to secure Brazil's sup-port for Washington's case against Can-

ada. Mr Blanchard is a former governor of Michigan. According to diplomats, his TV appearance had Washington's blessing. Mr Espy claimed on a recent trip to Latin America that Canada was dumping wheat in Brazil. He offered to provide the Brazilians with evidence of unfair trade

practices by Canada.
US and Canadian agriculture and trade ministers will meet in June in another effort to resolve their dispute, which cen-tres on a surge in US purchases of Canadian durum wheat, used mainly for pasta. The US plans to impose a punitive tariff

on imports of Canadian wheat, flour and barley above a specified level if agree-

ment is not reached by July I.

The action would be taken under Gatt
Article 28, which allows a country to
impose new trade curbs in cases where existing duties are considered too low to provide adequate protection for domestic

producers. But it also permits the target country to seek compensation through tariff increases of its own. Canada has threatened to retaliate against a wide range of

# Dutch enzyme plant for Tianjin

Novo Nordisk, a leading producer of industrial Mads Ovlisen, Novo's chief executive, but added enzymes and insulin for diabetics, is planning to set up an enzymes factory employing about 300

people in China, the company amounced yesterday, writes Hilary Barnes in Copenhagen.

Novo Nordisk has acquired a 160,000 square metre site near the town of Tianjin by agreement with the administrative commission of Tianjin economic-technological development

The site is big enough to house a plant for Rebien Sorensen, who is responsible for the pharmaceuticals production as well, said Mr group's projects in China.

that plans for this stage of the development remain at a very early stage.

Work on the enzymes factory will begin next year and production is due to start in 1998-99, the company said. "China has a population of 1.2bn and large industries in washing powders, brewing, alcohol and textiles. The country therefore has a big potential as a customer for Novo Nordisk's enzyme products," said Mr

# Astra-Takeda patent row settled

Astra, the Swedish pharmaceuticals group, yesterday settled a long-running patent infringement dispute with the Japanese group Takeda, writes Christopher Brown-Humes in Stockholm. The out-of-court agreement lifted its A shares by SKr8 to SKr168 (321.90).

The dispute centred on Losec, Astra's bestselling anti-ulcer drug, which last year had total sales, including sales through licensees, of SKr12.7bn. Losec is the world's fifth best selling drug worklwide. Astra accused Takeda of marketing a generic version of Losec, claiming this infringed the patent protection which Losec enjoys until 1999. It filed a series of suits against the Japanese group and its licensees last year.

Under the terms of the settlement, Astra will receive unspecified compensation for Takeda's future sales of products containing the generic version of Losec.

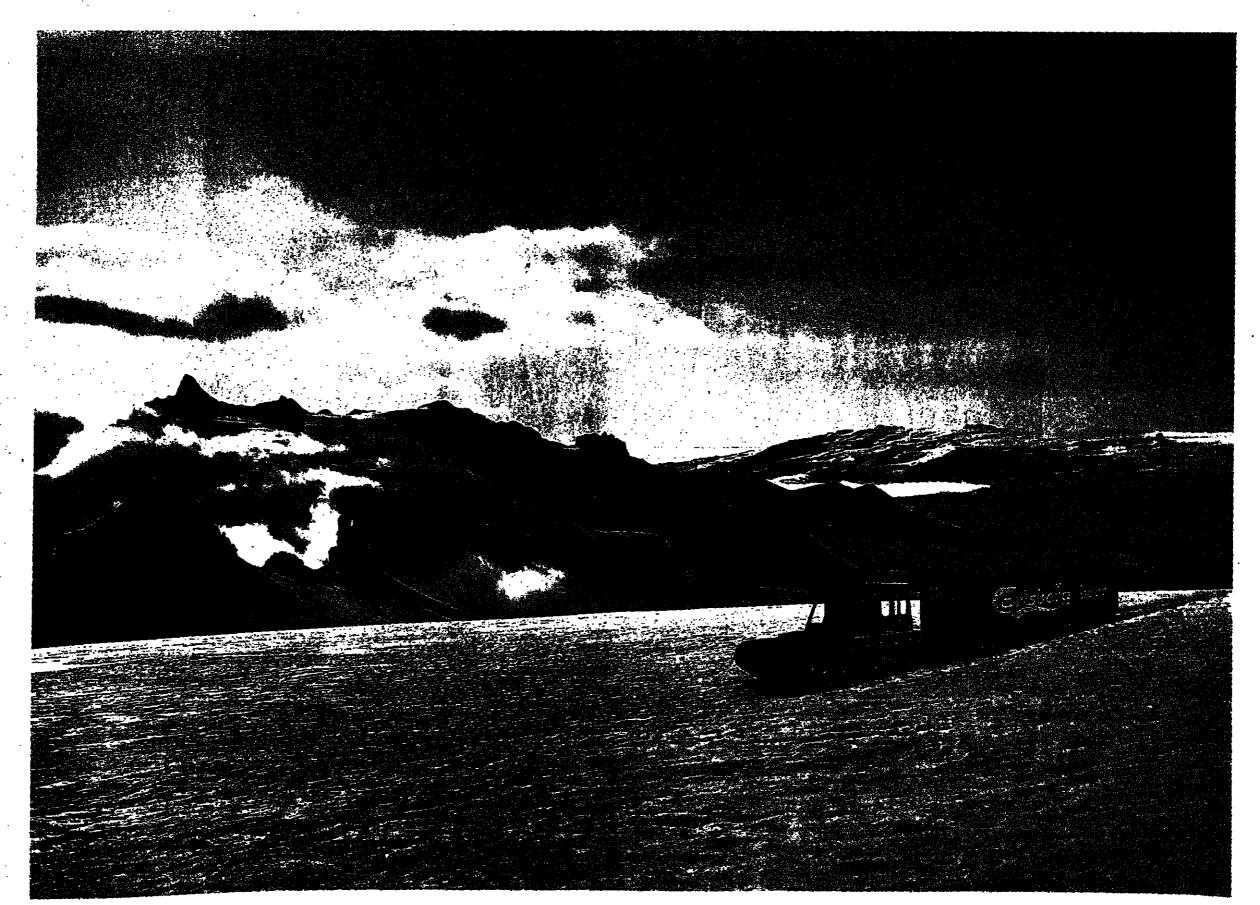

# Letters of credit crackdown

The Paris-based International Chamber of Commerce is launching a new effort to crack down on the growing fraud involving bank letters of credit and guarantees, it said yesterday, David Buchan reports

from Paris. Mr Eric Ellen, director of the ICC's commercial crime bureau in London, said "around \$1bn a year" was now going into fraudulent schemes claiming to provide investors with a large return on "prime bank instruments" such as standby letters of credit. Most of these schemes involved forged or

effectively untradable items. The ICC plans to keep banks

Probably the best beer in the world.

Imaging has moved out of the backroom and into the mainstream of business re-engineering, as CLAIRE GOODING reports here

# Quicker decisions, higher efficiency

IMPROVED DOCUMENT HANDLING

n imaging system has brought about a startling change at Birmingham Midshires Building Society. Two years ago it took an average of five weeks to process a mortgage application. Now a department only one fifth of its previous size processes applications in three weeks.

According to Mike Jackson, chief executive of the Wolverhamptonbased society, 80 per cent of mortgage deals are now offered within this new time-scale. More remarkable is the reduction in staffing lev-

els, from 150 people processing mortgages, to a staff of 30 or so. "Overall, we've reduced staffing by 1,000, from 2,450 to 1,450 since August 1992," says Mr Jackson. But this is very much part of a wider process of re-engineering the business. We've already gone through one 'pass' and now we are doing it again." Birmingham Midshires' system is

based on Wang's Open/image software, implemented by City-based Relational Developments RDL -"the imaging system has improved the speed of decision-making," says

"One of the key benefits is having all the information on hand, and being able to answer customers' and brokers' questions immediately from the screen without having to

"The second part is that using the

database coupled with the imaging er-base," he comments. system, we have a lot more information and history available on the customer than we ever had available through a paper file; that has brought our arrears levels significantly lower than they were

It is into this mainstream arena of business process re-engineering (BPR) that image processing is emerging from its niche, in partnership with other information sharing technologies such as groupware and workflow. This drawing together of parallel technologies has been made possible by the general adoption of powerful, highly adaptable (and lower cost) desktop workstations, and robust networking software.

More specific to the imaging mar-ket is the mundane but vital business of getting the images into the system, and storing them, once captured. Images are space-hungry, but optical disks have helped; an optical disk of 12ins diameter can store more than 100,000 A4 documents. Scanning technology has also become much cheaper, and like the fax and the PC, come within the reach of departmental budgets.

According to Geoff Bedser, a senior consultant at CMG. (Computer Management Group), image processing is far more relevant to business than it is to information technology (IT) - "TT people don't like it because it reduces their pow-

A banker by training, he has long argued the business case for imaging, and his work in CMG's finance division has given him a bird's eye view of the various imaging developments, as well as the offerings and alliances of various suppliers whose products have come and

"Over the last five years hardware and software have advanced at an astonishing rate. The emphasis of the system suppliers is now on improved process automation and document handling, rather than straightforward storage and retrieval. Companies who are aiming for optimum efficiency in their document handling are starting to consider the benefits of totally restructuring the way they work.

Andrea Wharton, research director of Twickenham-based Wharton Information Systems, writes an annual review of the UK imaging market in association with the UK Association for Information and Image Management (UK AIIM). She estimates that electronic document management (EDM) systems doubled sales in 1993, gen erating a total revenue of more than £130m.

Ms Wharton's report, Document Management: the Next Steps, estimates the current number of image processing sites in the UK at more than 7,000. Although the larger share of new installations still goes

to specialists such as Canofile and Cimage, the report identifies increasing interest among mainstream software publishers includ-ing Lotus, Oracle, and Sybase.

Ms Wharton believes that recent improvements in technology including data compression and the availability of high-quality ISDN tele-phone links, have helped make imaging more appealing as an alternative to acres of filing cabinets. "One of the most difficult things

was putting the data around the network. It's now faster, and PCs

are more able to handle images without expensive extras. "Large organisations which had a

real need, went ahead and did it anyway. Despite the deficiencies of the technology three or more years ago, they created their own environment behind closed doors. But increasingly we're seeing a desire to give much wider inter-departmental access to image information, so that image becomes simply another

Both Mr Bedser and Ms Wharton underline the fragmented nature of

the imaging market, and remark on how difficult it is to break into it. Even companies with as much muscle as Digital Equipment have changed direction several times, and eventually given up the struggle to establish a market share.

As in any emerging market, there are clever innovators in specific niches. Ealing-based Trimco, onetime Cimage distributor, has developed its own large-format technology. Imagesolve of Finchley (acquired in November 1998 by US-based Banctec) has both PC-based and client-server solutions. US company Excalibur has software for intelligent correction of optical character recognition (OCR), eliminating the inevitable problems of OCR such as coffee-stains on docu-

Concentrating on image rather than text is Bournemouth-based 4Sight, which has practically cornered the market in newspaper publishing with its software for transmitting images via ISDN lines between incompatible hardware.

At the low end of the market are turnkey storage and retrieval systems such as Keyfile and Watermark, sold through third parties. High-end offerings such as Filenet ImagePlus and Plexus have already been widely adopted by banking and financial users.

Wang's partnership with RDL in the Birmingham Midshires site is

typical of its strategy to use third parties and systems integrators to sell Open/image. After a disastrous loss of direction, and some years in the financial wilderness. Wang has focused sharply on imaging. David Allcock, marketing manager at Wang UK, is working to develop third-party channels for Wang's

Always clever at building in extras. Wang has built performance messurement into Open/image, but kept its own role anonymous - "we allow VARs to absorb completely our technology into their application no two-second commercial when the user enters the system, says Mr Allcock.

"Previously we had too many irons in the fire. In the last three years we have spent \$50m developing our imaging and workflow technology, and the only way we have of re-couning that is to sell in volume, through resellers, not direct."

Partners now include more than 20 Value Added Resellers (VARS) including House of Speed, Fraser Williams, and Lynxserve.

Open/image's intelligent workload assessment measures the time taken to process workloads, so that financial directors can see the gains "it allows you to justify the spend and see where the benefits are,"

SEYS Mr Allcock. "Increasingly the quality of systems is such that any dealer can supply shrink-wrapped imaging solutions. I can see the imaging market turning into a commodity

market, like PCs.' The report, Document Manage-ment the Next Steps, available from Wharton Information Systems, tel

**PRINTERS** 

# Surprises abound

The computer printer industry is one of the most dynamic segments of the office equipment sector and has been growing at double digit rates, reports PAUL TAYLOR

■ he printer may not share the glamour of the personal computer or demand the respect traditionally accorded to the mainframe or the departmental server, but the changes under way in printers and print technology are scarely less

Today, the printer market includes humble dot-matrix machines at the low end, low cost ink-jets for low volume and colour work, high quality personai desktop laser printers, network lasers connected to local area networks, and high speed digital copier-printers in the print room.

In terms of manufacturers. Mr Graham Salmons, a senior industry analyst in Dataquest's European document management group, says, "Hewlett Packard 'owns' the European printer market " HP has around a 33 per cent market share by volume and a similar percentage share by value - worth an estimated

\$2.65bn.(£1.81bn) The US manufacture's dominance of the market in part reflects a marked shift in the sales product-mix. Sales of printers based on older impact technology - such as dot-matrix and daisy wheel printers - are falling while sales of printers based on non-impact technologies like ink-jet, laser and Led (Light Emitting Diodes) are growing

strongly. This shift has been driven by the clear advantages which laser printers have over their rivals including convenience, print quality, high speed operation, advanced text and graphics capabilities and the rapid erosion of the price premum they once commanded. As a result, the 30:70 balance in favour of impact printers across Europe in 1991 is expected to be reversed over the next couple of years - 1993 was the first year when non-impact printer volumes exceeded those for impact devices.

Despite this, most analysts believe the dot-matrix printer will retain a role as the office workhorse for a limited number of high volume applications including those requiring continuous parcr such as orders and invoices.

For low-volume work. particularly in the home market Ruropean users in parcicular have cagerly embraced iuk and bubble jet printers which offer fast, virtually silent printing at very

low cost. Ink-jet printing technology has also provided a cost effective means of introducing colour to both business and technical graphics.

According to Dataguest, HP has over 90 per cent of the European colour ink-jet market sales worth \$1.13bn last year. Cannon ranks number two with around a 20 per cent share worth about £420m

Mr Salmons believes that injet printers will continue to replace dot-matrix at the will move away from mono

printer market, ink-jets also face a challenge from lower the Windows GDI printers which have recently appeared

advantage of Microsoft Windows software and PC processing power eliminating the need for costly 'intelligence' to be built into the printer itself. Although print speeds are relatively slow, they offer high quality

markets for laser printers are emerging - low-end personal printers capable of around 6ppm (pages per minute), and high-end heavy duty desktop printers capable of 16-20ppm for shared use.

the past few years although recent research conducted by Dataquest shows that even where PC users are connected to Lans, many of them still prefer to have a personal printer. Dataquest estimates that HP has about 48 per cent of the European market for page and non-impact printers and more than 60 per cent of the 16-20ppm network printer

are towards easier and greater paper capacity. this market segment, the projected growth of network and workeroup printing is attracting new entrants such as Rank Xerox which introduced a range network printers recently.

Users in network environments are demanding robust, fully featured workgroup printers optimised specifically for multi-user applications," says Mr Richard Gibbs, Rank Xerox' business team manager at a recent product launch. # OUR NEW DESKPRO MEANS YOUR OFFICE A WAITING ROOM.

hen you're working in Windows, are you twiddling your thumbs when you should be tapping your fingers? Click. Up pops the timer. Clickety-click. Nothing doing. Then before you blink twice, the screen jumps three places. Frankly, it would make anyone cross,

Maybe the time has come to consider a less frustrating alternative. Namely, the new Compaq Deskpro XL.

Quicker by design.

At Compaq, we know performance isn't just about a chip. It's about a system that reduces the bottlenecks affecting pre-fuctivity.

That's where the XL excels, Thanks to the PCI local bus in three sub-systems - graphics, SCSI controller and network connection - it's our most efficient desktop yet.

Technically speaking, the XL uses ultra-fast IDE or SCSI drives with read and write caching for swift data transfer. To boost performance, the processor is fed by a 64-bit memory bus and backed by a 256K cache.

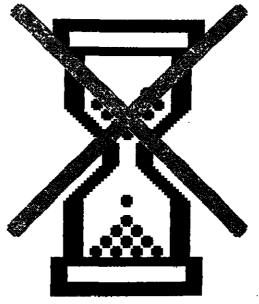

But in plain English our new desktop really flies, going up to three times faster than its predecessor.

> Ouicker off the mark. Pre-installed Ethernet drivers and

Universal NetWare Client make the XL ready to run on your network immediately.

You'll have an inkling of the power to come when Windows boots up in seconds. A welcome change to what you may be

Soon you'll notice you're not waiting for the screen to redraw itself. That's because the Deskpro's sheer speed is capable of matching you thought for thought.

The secret lies in our QVision 2000 card which provides lightning-fast graphics and extremely high resolutions so you can handle more on screen.

Slower to age.

Face the future confidently safe in the knowledge that our

Plug and Play support makes configuration of EISA, PCI and ISA Plug and Play cards a doddle. You can change processors, add

storage devices and four expansion cards. The XL takes it all in its stride, adjusting to any change automatically. The price is just £1995" (£2344 inc VAT). No other

up to 128MB of extra memory, even install up to three more

desktop offers you so many performance features at such a competitive price. The sands of time are running out for ordinary desktops. For full details about our Deskpros, return the coupon or

# Immigration row heightens poll tensions

By David Owen, Kevin Brown and Roland Rudd

The Conservatives yesterday accused the opposition Labour and the Liberal Democrat parties of seeking to under-mine Britain's immigration controls, as the row over the UK's ability to block decisions made in Brussels gained pace.

Raising the race issue for the first time in the increasingly ill-tempered European campaign, Mr Michael Howard, home secretary, said it was vital Britain kept its EU veto over immigration and asylum matters.

controls were "the foundation of good race relations". By esponsing policies that would "fatally undermine" Britain's veto, both opposition parties were putting at risk "our immigration controls and our race relations legislation". Mr Howard added: "They would make race relations in this country significantly worse,"

The two opposition parties hit back strongly, Labour saying it had asked the Campaign for Racial Equality to investigate Conservative "race scares". Mr Jack Cunningham, Labour's campaign manager, said his

party had repeatedly made clear it would retain the British veto on justice and immigration issues, as well as for taxation, defence and security matters. "The Tories go on telling lies about us, and I go on saying that they lied their way through the 1992 gen-eral election," he said. "We are not going to let them get away with lying their way through this one."

Mr Charles Kennedy, Liberal Democrat president, said it was "distaste-ful" for the Conservatives to "play this card at this stage in the campaign". It was "not at all appealing to see this sort of fingoism".

Meanwhile, Mr Paddy Ashdown used a visit to Eastleigh, where the Liberal Democrats are hoping to win the parliamentary by-election next month, to attempt to address suggestions that the party's policy on Britain's veto was in disarray.

Mr Ashdown drew a distinction between the legislative and executive decisions in the European Union. He said the Liberal Democrats supported the retention of the national veto in executive decisions but not in the leg-

National issues, such as defence, finance and immigration would also be subject to an effective national veto because of the party's support for double qualified majority voting. Mr Ashdown also made it clear that any change in the national veto would be the subject of a referendum.

However, Mr David Hunt, employ-ment secretary, said Mr Ashdown's distinction between legislative and executive decisions were far too blurred to be of any meaningful use. Mr Ashdown's commitment to turn the Council of Ministers into a "Eurocabinet" showed he would settle for "nothing less than a centralised Euro-

# **BBC TV** in limited return to **Hong Kong**

. By Raymond Snoddy

RBC World Service Television will return next month to Hong Kong on a limited basis. The BBC lost its ability last month to reach the people of the region after the corpora-tion agreed to take its channel off the Star Television satellite system, controlled by Mr Rupert Murdoch's News Corpo-

ration. Wharf Cable, Hong Kong's cable network, will carry four hours a day of BBC World Service Television news and information programming, with six hours daily at the weekend. Mr Bob Phillis, BBC deputy director-general and chairman of BBC Worldwide, which oversees the corporation's international activity, said yesterday

in Hong Kong that the deal was only a beginning. "This is the first step towards our goal of resuming World Service Television to the Far East." he said.

The BBC agreed to go off the northern beam of the Star satellite before the end of its contract in a deal to extend time on the southern beam, covering the Indian subcontinent.

The BBC also said its news and information channel would be available in New Zealand early next year on a network of regional stations. Programmes will also be carried on the

# Britain in brief

# Labour pledge on bank openness

A future Labour government would continue to publish the minutes of monthly monetary policy discussions between the chancellor and the Bank of England, Mr Gordon Brown, shadow chancellor, said yesterday. Mr Brown said be had "no

plans" to stop publication of the minutes in spite of the political difficulties that could follow the disclosure of differences with the bank. His pledge could help Labour convince the financial

markets of the credibility of its economic policies and its commitment to low inflation. The danger of an open clash with the bank over inflation prospects might inhibit the pace at which Labour could implement an expansionary policy aimed at creating full

### **British Gas seeks** fewer barriers

British Gas called for the early lifting of regulations that restrict its activities in the commercial market of consumers who use more than 2,500 therms a year. Mr Cedric Brown, chief

executive, told an energy conference in London that government efforts to promote competition were now anti-competitive, because they tilt the playing field in favour of other companies".

He said market share constraints had resulted in competitors capturing 45 per cent of the market above 2,500 therms a full year before a deadline imposed by the UK's

monopolies commission.

Mr Brown warned that the phased opening of the domestic market beginning in 1996 was a "massive experiment" affecting 18m households, and that there was "precious little time to work out potential

### MPs warn over pension reform

Pressure for an overhant of occupational pension law intensified yesterday as a cross-party committee of MPs urged changes even beyond those corrently under consideration by the

government The Tory-dominated Commons Social Security Select Committee said in a report the proposals the government is expected to put forward on pension law reform would not do enough to protect the security of

workers' pensions. It urged that schemes be required to give more generous pensions to those who change jobs and said individuals should be able to challenge trustees in court.

### Former Defence official iailed

A former director of the Ministry of Defence munitions procurement department, who received £1.3m in Illegal payments from foreign arms companies, was jailed for a total of four years. In Britain's biggest cash

corruption case, Mr Gordon Foxley, 69, also had assets worth more than £1.5m confiscated at crown court in

east London. Mr Foxley was found guilty last November of 12 counts of corruption between 1979 and 1984. He was given 18 months to meet the confiscation order or serve a further three years

### Purcell volume sold at auction

A small calf-bound volume containing the only keyboard music by English composer Henry Purcell in his own hand known to have survived sold for £276.500 at Sotheby's yesterday. The price was at

the lower end of the forecast. The 21 harpsichord pieces were discovered in a mass lot at another auction house last year. The buyer was UK dealer Otto Haas, but there was a strong possibility that he was bidding for an overseas collector.

Parcell is one of the few British composers with an international reputation.

### Farmland shows higher returns By Deborah Hargreaves Financial institutions moved heavily into farmland invest-

Investment in Britain's agricultural land last year generated the highest returns for fund managers in 14 years, according to a survey by Savills land agents

Institutional investors saw a 16.3 per cent return from agricultural holdings, including profits from the sale of land Mr Jim Ward, head of agricultural research at Savills, said the rate of investment income from agricultural land had outperformed commercial property by 5 percentage points over the past 6 years. However, property returns are still well below those in the equity market, where pension funds earned 28 per cent last

Around 30 per cent of Britain's farmland is owned by large landowners such as the Church of England, the National Trust and the Queen with financial institutions holding about 1 per cent.

ments in the 1970s when inflation was high and farm incomes were rising rapidly. But most have since been seeking to reduce their holdings. Most fund managers are con-

cerned that land values will drop over the long term as a result of Common Agricultural Policy reforms which will cut farm produce prices. Savills reckons institutions sold 45,000 acres of farm land last year. The survey is drawn from a sample of 49 financial institu-

tions which between them own

202,000 acres of agricultural land - down from a peak of 550.000 acres in 1984. Land prices are 20 per cent lower in real terms than in 1980, but land values rose last year with the upturn in farmers' earnings. Institutional purchases of farmland dried up last year and fund managers bought only 2 per cent of farm

properties compared with 38

A policeman talks to a protester at a demonstration in Leytonstone, east London, yesterday against a motorway extension. Protesters clashed with security guards and contractors in efforts to stop them clearing trees in preparation for the M11, which will link the Cambridge-to-London motorway with central London. The demonstration is a further example of mounting environment tal objections to construction projects, especially new roads

# Backdown on mining-related illness liability

The government is to remove one of the remaining obstacles to coal privatisation by back-ing down from its insistence that purchasers shoulder all liabilities arising from industrial illnesses of employees inherited from British Coal, writes Michael Smith.

It is now prepared to take on some of the liabilities itself. The retreat came after intense pressure from prospective bidders who warned that a con-tinuing hard line by ministers could have made insurance

impossible. N.M. Rothschild, the merchant bank advising the gov-ernment on privatisation, said yesterday 33 parties had sub-mitted applications to qualify for bidding by Wednesday night's deadline.

All of the regions are thought to have attracted interest from at least four potential bidders. It is understood that overseas companies, including some from Australia, are among the applicants. Interest from north America is

government was hoping for. Potential bidders, who paid £15,000 to "pre-qualify" for each region and £6,000 for each standalone pit, have until September to decide whether to hid. The decision on illness liabilities will be welcomed by potential bidders. Although not the only liabilities issue which

most significant. According to Nacods, a pit union, claims from former miners suffering from work-related sicknesses could exceed £5bn.

The Department of Trade and Industry would not comment on industrial illness liabilities, but stressed that all coal workers, past and present,

### PUBLIC CALL FOR TENDERS FOR THE SALE OF THE ASSETS OF THE COMPANY UNDER THE TITLE "ALTIS TOURISM AND TRADE CENTRE S.A.

The Societe Anonyme under the title "ASTIKA AKINITA A.E." with head offices in Athens (43 Panepistimiou Str.) lawfully represented under its capacity of special liquidator by virtue of resolution No. 357/31-3-1994 of the Patras Court of Appeal, of the limited liability company "ALTIS TOURISM AND TRADE CENTRE S.A."

A public call for tenders with sealed, binding offers, for the sale of the total assets of the enterprise under special liquidation by virtue of article 46a, L 1882/1990, of which the content is the exploitation of the hotel "ALTIS" of the societe anonyme under the title "ALTIS TOURISM AND TRADE CENTRE S.A."

**ACTIVITIES AND BRIEF DESCRIPTION OF THE COMPANY** The company was founded on 18.10.1983 with the objective of exploiting tourism and trade centres in Ancient Olympia and other Greek cities and exercises a hotel enterprise in Ancient Olympia, Prefecture of Ilia, Greece.

The assets of the company to be sold are described in detail in the offer memorandum and consist of one (1) hotel complex fully equipped, located in Ancient Olympia, Prefecture of Ilia, Western Peloponnese, on the regional road Pyrgos-Tripoli, at the edge of the city near the Archaeological Site and opposite the OTE (State Telephone Company) building and the Town Hall, under the title "ALTIS".

It is a B Class hotel with a capacity of 61 rooms and 116 beds. It is erected on a site with a total area of 1,618.65 sq.m. which occupies the entire building block (BB 32) and it consists of a basement (1,160,26 sq.m.), a ground floor (1,145,26 sq.m.), a first storey (1,116.72 sq.m.), a second storey (956.88 sq.m.) and a terrace (37.70 sq.m.), plus the electromechanical installations required for the operational needs of the tourism unit and its security such as air conditioning, fire protection, kitchen installations, laundry, confectionary shop, restaurant, telephone centre, etc.

Any interested party to receive, in the event they have not already received, the offer memorandum, and submit a sealed, binding ofter accompanied by a letter of

guarantee by a Bank operating lawfully in Greece. TERMS OF THE CALL FOR TEMBERS

1. The public call for tenders will be carried out according to the provisions of article 46a, I. 1892/1990 which was added to the law by virtue of the provision of article 14, I. 2000/91, the terms included in the present call for tenders and the terms of the offer memorandum, which interested parties may obtain after submitting a pledge of confidentiality in writing.

2. In order to participate in the call for tenders, interested parties are invited to deliver a sealed, binding offer in writing by 14.00 on Tuesday, June 21, 1994 to the Olympia notary public Mr. Christos Lembropoulos, 250 70 Petopion, Illa, tel. no. (0624) 31424. 3. Each offer will be accompanied by a letter of guarantee issued by a Bank

operating legally in Greece, with the contents described in the offer turn and amounting to the sum of fifty million (50,000,000) dracking 4. The offers and the letter of guarantee must be delivered in a sealed, opeque

The offer must mention clearly the amount offered for the purchase of the total assets of the company under liquidation and must not contain any terms, options or vague phrases which might create uncertainty as to the manner of payment of the im being offered or other matters related to the sale.

The delivery of the offers will be made by the interested party in person, or by his authorized recresental

7. Overdue offers will not be accepted and will not be considered. The binding nature of the offers will apply until the award of the sale. 8. The assets of the company and all the elements of which they consist, such as

real estate, moveable objects, name, claims, title and abbreviated title, rights, etc. will be sold and transferred "as and where they are", i.e. in their real and legal condition and at the place where they are located on the date of signing the contract of sale.

9. The liquidating company and the creditors representing 51% of total claims against the company (pera. 1, article 46a, i. 1892/1990 as it currently applies) are not liable for any legal or real defects or the lack of any attributes of the objects and rights being sold, nor are they liable for any omissions or inaccuracies contained in the offer

10. Interested potential purchasers are obligated, under their own supervision, and by their own means, expenses and personnel, to investigate and acquire a personal perception of the objects being sold, and to mention in their offer that they are fully

informed as to the real and legal condition of the assets under sale. 11. The liquidator and the creditors mentioned in para, 9 above are entitled, according to their own judgement, to reject offers containing terms and options, regardless of whether they are superior to other offers as regards the amount being offered.

12. In the event that the party to which the assets under sale are awarded, violates its obligation to come forward and sign the contract within ten (10) days from the relevant invitation by the liquidator and observe the obligations arising from the present announcement, the letter of guarantee amounting to fifty million drachmae (50.000,000) is declared forfelted in its entirety in favour of the liquidating company "ASTIKA AKINITA A.E.", towards covering all its expenses of any type and its services, as also any direct or indirect damages, without the necessity of proving specific damage, and as a penal clause in favour of that company, deemed as having been submitted with the offer, so that it can be collected from the Bank issuing th guarantee. The letters of guarantee submitted for participating in the tender will be returned to all other participants following the evaluation report of the liquidator and the creditors mentioned in para. 9 above, and to the successful bidder, to whom the

sale will be awarded, following the payment of the amount agreed and the drafting of the payment order. 13. The seals of the offers will be broken by the notary public mentioned above

at his office, at 13.00 on Wednesday, June 22, 1994. 14. The successful bidder will be the party whose offer will be judged by the liquidator and approved by the creditors mentioned in para. 9 of the present, as being the most advantageous for the company's creditors.

15. The liquidator will notify the successful bidder in writing or his obligation to come brward to the place and at the time determined in the notification, for signing the contract transferring the assets, according to the terms of the offer and any improved terms that may be indicated by the creditors and agreed with the highest bidder.

16. The signing of the transfer contract stands as a final assignment according to article 1003 of the Code of Civil Procedure whereas the amount to be paid to the sidator by the highest bidder stands as a bidding payment according to article 1004 of the Code of Civil Procedure.

17. All expenses and costs arising from participation in the tender and the transfer (tax, stamp duty, notary public's less, registrar of mortgages, announcements, etc) will burden exclusively the interested potential purchasers and the highest bidder

18. In the event of part of the purchase price being on credit, the highest bidder will be obligated to provide any guarantee that may be requested by the liquidator according to his own exclusive judgement, and will be burdened with all related expenses, costs and fees required for the formation of such guarantees and their

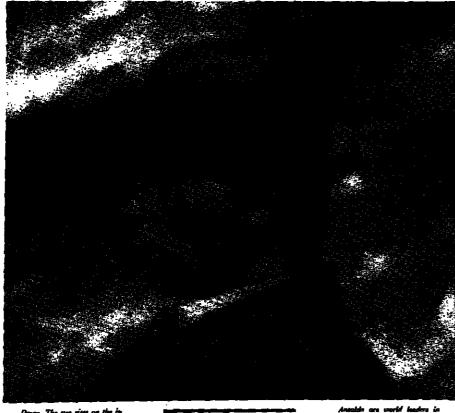

19. The liquidator and the creditors will not bear any responsibility or flability against those who will participate in the tender as regards the evaluation of the offers, their recommendation of the successful bidder, the decision for the repetition or cancellation of the tender and any other decision relevant to the procedure and

20. The submission of the binding offer does not create a right of awarding the assignment for the sale. In general, all parties participating in the tender do not acquire any right or claim arising from the present announcement and their

participation in the tender against the liquidator or the creditors for any cause or 21. The present announcement has been drafted in the Greek language and translated in the English language. In every instance however, the Greek text will

he property industry may have escaped the scrutiny in the UK Department of Trade and Industry's white paper on competitiveness, but as the above comment demonstrates, it has no grounds for compla-

Speaking at a conference on Property in the Economy in Cardiff on Monday, Sir James Blyth attacked the property industry's lack of regard for the needs of its customers.

At a time when the rest of the commercial world is becoming more flexible and responsive to customer needs. the property industry has become more rigid and uniform, Sir James said. The industry has allowed itself to be dominated by the needs of its financiers, leading to a lack of flexibility and innovation in the leases it offers

The traditional institutional lease, with its 25-year duration and five-yearly, upward-only rent reviews, has led to distor-

tions in the market, he said "In the UK much of the economic success of the past decade has come from freeing up the supply-side of the economy, and from recognising the pre-eminence of the customer. It is important that property. too, responds to these impera-

sort out its own problems.

making long-term investments

tives if the UK economy is to expand further," Sir James

It is a familiar theme. The possibility that the workings of the commercial property market damage the wider economy has been raised repeatedly over the past couple of years, by academics, businesses, lobby groups, the Bank of England and the government.
The Department of the Envi-

ronment has consulted widely on the case for reforming a number of the industry's practices, including outlawing upward-only rent reviews and confidentiality clauses, which restrict the available information on rent reviews. The Treasury is also thought to be concerned that upward-only rent reviews may be at odds with its anti-inflationary

The government has already accepted the case for reforming the current law on privity of contract, under which a tenant bears the responsibility of paying rent if a lease has been passed on to another tenant who subsequently defaults.

Even if landlords and tenants reach a compromise, the sector remains open to attack, lease structures.

The UK arguably invested

Yet many argue that a far greater problem facing the industry is the time lag between planning and completing a speculative development. The risk that economic conditions can change radically in the time a building is under construction makes the indus-try highly cyclical, prone, for example, to periods of over-

ing, could be encouraged".

Responding to these suggestions would help introduce

as its problems extend beyond

Its past mistakes are all too visible: the glut of offices in central London is evidence of

too much on new buildings in the second half of the 1980s, at the expense of other forms of investment. Britain had the highest increase in non-residential building investment of any of the Group of Seven economies and the lowest rise in investment in plant and machinery.

A recent report on property cycles published by the Royal Institution of Chartered Surveyors, recommended that the industry should consider how the speed of the development responses could be accelerated, how market signals could be read with greater circumspection and how other ways of meeting occupier requirements, such as custom build-

more stability and might also deflect charges that the industry undermines the health of the economy as a whole.

property both returned 1.6

per cent, a fall of 1.5 points and 1.9 points respectively.

The year-on-year figures for

total returns continue to

improve. In the retail sector,

total returns rose to 26.6 per

compared with 25.3 per cent

for the year to March. Over

the year, capital values rose

by 17.4 per cent and rents declined by 1.7 per cent.

In the office sector, total

returns rose to 24.7 per cent,

a 1.8 percentage point

increase on the year to March. This stemmed from

improved capital and rental

performances which moved

by 13.4 per cent and -10.5 per

cent, respectively. Industrial property's year-on-year total

returns rose by 1.6 percentage

points to 25.8 per cent.

# Matthews: possible reunion with Beazer Matthews (right), who worked for County NatWest for

John Matthews, 49, has resigned as chief executive of Indosuez Capital, the London merchant banking arm of France's Banque Indosuez, His departure increases speculation that he is preparing to help his old boss, Brian Beazer, make a stock market come-

hack. Matthews joined Indosuez in October 1991 a few months after quitting Bezzer, the fast expanding construction group. Banque Indosuez said that it was "very much an amicable parting". Matthews is reluctant to elaborate on his reasons for leaving save to say that Indosuez's ambitions for London differed from his own both in terms of size and capital.

and at the end of 1988 Matthews moved across from County to be Beazer's deputy chief executive. too rapidly, fell out of favour with the stock market and Matthews stepped down from a heavily-indebted Beazer a few

17 years, made his name as the merchant banker who helped Brian Beazer transform his small West Country building firm into one of Britain's biggest construction companies in less than a decade. When Matthews brought Beazer his first deal, the company was capitalised at £4m. At its peak, Beazer was capitalised at over £800m

However, Beazer expanded

**Crown Estate Commissioners** WATER BOTTLING FACILITY

# **BRAES OF GLENLIVET**

near Tomintoni, Moray

The opportunity is offered to acquire assets which have recently been in use as a water bottling plant. The assets consist of factory, warehouse and office premises purpose built for water production in 1993 and served by two separate springs which rise in the Grampian Mountains in an area where land usage is restricted to sheep grazing and traditional field sporting activities. The quality of the spring water is very high and has been voted the overall winner in a comparison survey published in the national press.

The premises consist of a factory comprising 12,900 sq.ft. of workshop and warehousing space, with an office block of 1,350 so. ft. on a site of 4.3 acres. The premises are located in the Braes of Glenlivet to the south of the B9008 from Dufftown to Tomintoul and lie in the heart of the Speyside whisky producing area. The springs have been capped and linked to the factory by large bore pipes.

The assets are offered for lease by tender and further particulars and tender forms can be obtained from the Property Department (Estates), Grampian Regional Council, Woodhill House, Aberdeen AB9 2LU, Tel 0224 664260.

small cultural revolution is taking place in the shadow of the Great Wall of China, in hilly country two hours' drive north-east of Beijing. China's first outdoor management training centre opened there this month near the remote hamlet of Jin Shan Lin.

The centre, which has the government's blessing but is operated by an independent foreign firm, is a microcosm of the country's economic liberalisation. It is run by I Will Not Complain

International, a training company based in Chiba, near Tokyo in Japan. Its mission is to murture western management values such as innovation, independence and originality among the entrepreneurial leaders of China's economic expansion and the staff of multinationals in the region.

If IWNC's recent experience in helping unthinkingly loyal Japanese executives to think for themselves is any guide, this latest western idea to enter China has a good chance of taking

Q., . 100

2 100

---

IWNC had already worked for a US-Chinese joint venture before opening a base in China. The first customers at the centre will be Reuter's Japanese sales team in July followed by the Asta-Pacific regional managers of Smirnoff in October.

IWNC's founder, Anthony Willoughby, a professional explorer and former salesman opened his Japanese outward bound centre five years ago to strike a civilising challenge to the "hell camp" style of traditional Japanese outdoor training contres.

Since start-up, 5,000 staff have been through the IWNC course at Chiba, mainly from foreign groups such as Du Pont, Reuter and American Telephone and Telegraph, but also including a handful of Japanese groups such

as Kanematsu, the trading house. In spite of Japan's deep recession, the number of participants rose 30 per cent to 1,500 last year, of which four-fifths were repeats or direct referrals. Willoughby believes the recession may have helped him by encouraging Japanese companies to question the value of blind obedience, thereby productivity.

Annual turnover exceeds \$1m (£600.000) and a Kenyan centre, operated under franchise, is to open in July.

Willoughby had the idea of launching a training school five years ago, after taking part in a Japanese-style course. It

William Dawkins on a Japan-based outdoor training

course that is not the usual hell

Learning to trust others in China

showers and ritual screaming of slogans such as "to think you will be liked by your subordinates is wishful thinking".

He had hoped to sharpen his own talents as a leather goods salesman. But the experience also suggested that there might be a Japanese market for a more creative kind of training, along western lines.

Japan's hierarchical management tradition demands loyalty, but it does not always breed trust, observes Willoughby. The subordination of individual needs to those of the company, as embodied in hell camp training, can also stifle original thought, preventing executives from fulfilling their potential, he argues.

Accordingly, the physical tasks Willoughby has chosen for his three-day course are light enough to make the experience fun, but demanding enough courage to reinforce participants' trust in themselves and each other. While the Chinese have never been noted for lack of

self-confidence, they could benefit from another of IWNC's aims to break down social barriers between different nationalities in the same management team.

In one task, for example, team sembers must climb an 8m pole and lesp from the top to catch a trapeze, while colleagues hold their safety harness. In another, members take it in turns to fall backwards off a 2m platform into

colleagues' arms. At the end of the day, participants gather for a large and liquid meal in the courtyard of an old farmhouse with a view of the Great Wall. The discussions that take place at these events, as formerly reticent participants relax, can be the most valuable part of the course, says

Equally, senior managers can retire for a board meeting in an open 17th century stone turret with a commanding view of the Great Wall and surrounding hills.

The course strives for an un-Japanese light-hearted tone, embodied in the company's name. This comes from the promise not to grumble that Willoughby has extracted from members of his various exploration expeditions since a trip to Papua New Gainea when food ran low.

One clause is: "I will not complain if I get eaten or trodden on by animals." Another is: "I will not complain if two porters/ camels/ horses are employed with the sole responsibility of carrying

Joking apart, the IWNC name is supposed to underline selfreliance, a theme that parallels the Japanese admiration of uplaining perseverance. has praised the expedition rules

as a philosophy of life. As in Japan, IWNC's main customers in China are likely to be foreign companies or joint ventures seeking to instill team spirit into teams of mixed nationalities and backgrounds

lis first, last year, was an alliance between SmithKline Beecham, the US pharmaceuticals group, and the Chinese government. The group asked IWNC to run an outward bound course for 70 Chinese salesmen at its own headquarters in

Their response was mixed; some thought the course taught them to achieve higher goals, but others, mainly older members. would have preferred to spend the money on buying presents True to the contract, however,

they did not complain.

piece of seemingly perverse management wisdom is beginning to sink in among the boardrooms of the world's beleaguered computer giants: "Doing what you do best can destroy you

More accurately, perhaps, compa-nies can be destroyed by continuing to do what they do best in the face of evidence that their business environment has changed.
US manufacturers International

Business Machines, Digital Equipment and Unisys are examples. They are all masters of the art of big computer design and produc-tion, yet their market is in retreat as customers increasingly look to networks of smaller computers for more cost-effective data processing. The falling price of technology, which cut one third off the cost of IBM mainframes last year alone, is a further headache for these compa-

The consequences are well known. IBM is struggling to recover from three years of losses and large-scale redundancies while the future of Digital, once second only to IBM,

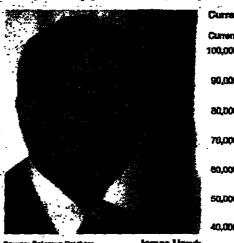

looks uncertain at best. But Unisys, which three years ago looked dead in the water, is different. The product of the 1986 merger of Burroughs and Sperry, it has now been profitable for two successive years after losing almost \$2.5bn (£1.66bn) between 1989 and 1991. Its first-quarter results this year were encouraging with earnings per share, before special items, of 21 cents a share against 16 cents the

The man widely credited with the recovery - chairman and chief exec-utive James Unruh - is not merely content to rescue the company. Unruh, who took over in 1990 from Michael Blumenthal, is intent on reestablishing Unisys as a force in global data processing through a fundamental reorientation of its strategy and management style.

For a start, the new Unisys will be smaller. At its peak, the company employed some 120,000 people now the total is less than 50,000. Once revenues hovered around the \$10bn mark; in 1993 they were

Unisys will still make and sell computer hardware - "We are not going to become a computerless computer company," Unruh says but it will extend its already catholic attitude to sticking its own logo on other maker's systems. The processor chips in its next generation of systems will be manufactured by its old rival IBM, for example.

Unisys aims to become an information management company; in Unruh's words, "client-driven, technology-based and services-led". This compares with the company's earlier attitude which amounted to a used to develop the next higger, fasUnlays's big productivity leap

Current númber of employees and revenue per employee, 1988-95 100.000 € S170 90,000 \_ \_ \$180 80,000 \_ \_\_ \$150 76,000 ... \_ \$130 80,000 -\_ \$120 50,000 .

# From caterpillar to butterfly

Leading computer manufacturer Unisys has come back to life after metamorphosis, writes Alan Cane

ter version of what we were doing and send salespeople out to find customers who could put these things to use."

Unruh stopped Unisys concentrating on what it could do best, making mainframe computers, and shifted the emphasis towards software and services. This is not new in itself. Every big computer maker is looking for increased revenues from services as profit margins on mainframes are squeezed.

But Unruh has moved with a speed and conviction which has not been obvious at other companies. Staff numbers were almost halved in 12 months at a cost of more than \$1bn. The company pulled out of semiconductor manufacturing, saving \$100m a year in the process. Payroll and other services were contracted to outside suppliers.

Contraction at IBM and Digital has been drawn out and painful, leaving remaining staff anxious and demoralised. Digital is still faced with cutting a further 20 per cent of its workforce.

The major challenge for Unruh, however, was to transform Unisys rapidly from hardware manufacturer to services company. It meant a big cultural shift. An important appointment was Victor Millar, formerly with global advertising agency Saatchi & Saatchi, engaged to head the company's consulting side in November 1992. Millar had earlier been with the accountancy firm Arthur Andersen for 25 years where he was widely credited with the growth and success of its consulting operations.

Earlier this year, Unruh also appointed Malcolm Coster as presint of the company's Europe, Middle East and Africa division. Coster, a software specialist and manage ment consultant, had been head of international business development at Coopers & Lybrand. Coster believes Unruh's secret is a realisable vision of the future: "He sees the butterfly the caterpillar can become, not an improved caterpil-

The question remains how rapidly to diffuse the knowledge and experience necessary for successful computer consultancy through a hardware-based organisa-tion. Unisys's answer is making the best of what you have and buying

in what you lack. Some of that experience, Unruh says, is locked within the company. Unisys's size and global reach gives it an enviable window on the business issues facing its customers. Furthermore, it had a sound techni-

cal background in some of the more

difficult computing applications -

global funds transfer, for example, "We were able to build on that," says Unruh. "We did not start from

zero, but we are finding our way." The fact remains that of the company's 6,000 professional services staff around the world, most are skilled in technical areas, such as project mangement and systems integration. "To a lesser extent, we have people with the ability to go to a client, understand their environment and determine what technology is best for them. That is where we have had to learn more. We have some of that knowledge because historically we used to give it away. We did a lot of that for clients as part of getting their computer business. Part of the learning process was understanding how to charge for these services.

Today, Unruh says, the company is limited in its growth by human resources. "We could grow faster if we had more people with this kind of knowledge and capability. We do not have the time to retrain every-

The evidence that Unruh's strategy is succeeding lies in the financial results. More tellingly, perhaps, the time it takes customers to pay their bills is down from 87 days to 47. "Only satisfied customers pay you," Unruh smiles.

- Interested parties are invited to receive from the Liquidator the Offering Memorandum and the draft letter of guarantee in order to submit sealed, binding offer to the Athens notary public appointed to the public auction, Mrs. Andriani-Dimitra Economopoulou-Zapheiropoulou, 18 Vonkourestion Street, 5th floor, tel. +30-1-3618249 up to 1900 hours on Tuesday 21st June 1994. The offer must be submitted in person or by a legally authorised representative. Offers submitted after the time limit
- has expired will not be accepted or considered. The office will be unsealed before the above-mentioned notary at 1100 hours on Wednesday 22nd June 1994 with the Liquidator in attendance. Persons who have submitted bids within the prescribed time limit may
- The sealed, binding offers must clearly state the offered price and method of payment for the purchase in toto of the company's assets and must be accompanied, on penalty of millification of the offer, by a letter of gustantee from a bank legally operating in Greece to the amount of 50,000,000 drachmas or the equivalent amount in U.S. dollars.

The elements of the company's assets are sold and will be transferred in

- their actual and legal condition on the date the sale contract is signed. The Liquidator, the company and the majority creditors are not responsible for any legal or actual defects or for any shortcomings in the specifications of the objects for sale nor for any deficiencies in their description or condition. Interested buyers (hereinsfter referred to as Buyers) must, on their own
- usibility, form their own opinion of the objects for sale and state, in their offer, that they are fully aware of their actual and legal condition. Offers must not contain terms which could create vagueness or prevariente their bindingness. The Liquidator and the majority creditors have the right to reject offers which contain terms and options.
- In the event that the highest bidder fails to appear and sign the relative sales contract within twenty (20) days from being invited to do so by the Liquidator, then the above guarantee of fifty million drachmas (Drs. 50,000,000) is forfeited to the Liquidator to cover all expenses of any kind and time spent, without any obligation on his part to give any specific proof, or consider that it has been forfaired to him as a penalty clause and collect it from the guarantor bank.
- The highest bidder is the person whose offer has been so judged by the liquidator and approved by 51% of the creditors as being in their best
- 10. The liquidator has no liability or obligation to participants in the tender. both with regard to the drafting of the evaluation report and to the proposal of the highest bidder, also, the liquidator is not liable and has no obligation towards participants in the tender in the event of its elistion or repetition, if the results should be deemed unfavourable by the creditors.
- Those taking part in the tender and submitting offers do not acquire any right or claim accraing from the present tender or the adjudication to the highest hidder, against the liquidator and the creditors for any reason or
- Expenses for the transfer of ownership of the assets for sale will be borne by the Buyer. For any further information interested parties may apply GREEK EXPORTS S.A. 17 Panepistimion Street (1st Floor)

The blood products sector used to be a quiet backwater of the healthcare business. Now, it is a rapidly growing money-spinner. The engine of change has been blotechnol-

ogy, and the treating of blood disorders has created the first superstar of that business, California's Amgen.

Five years ago, blood products

Five years ago, blood products meant substances derived from blood. These would be used in blood transfusions and as supplements in conditions such as haemophilia (uncontrolled bleeding).

But the business suffered from high costs, owing to the laborious nature of collecting blood from donors, a lack of patent protection which in turn limited prices, and periodic scandals over contamination. Few of the big pharmaceuticals companies bothered to get

What blotechnology did was to make possible the high-volume manufacture of some of the components of blood, even those that appear in only minute quantities in the body.

the body.

Two big-selling products have been developed so far. The most dramatic sales have come from erythropoletin (EPO), a hormone produced naturally by the body which Amgen has synthesised and com-

mercialised as Epogen.

EPO is used to treat anaemia, a condition which can arise when not enough EPO is made by the kidneys. EPO travels via the bloodstream to the bone marrow were it stimulates the production of red blood cells. It is these cells which carry oxygen from the lungs to the rest of the body.

For more than 30 years, patients with kidney disease have received dialysis, a mechanical treatment that mimics much of what the kidney does. But dialysis machines do not make EPO, so the patients develop anaemia.

In the past these patients have received blood transfusions, an expensive and laborious procedure that carried risks of infection and other complications. Today the shortage of natural EPO can be addressed directly by Epogen. Amgen says that 80 per cent of dialysis patients in the US now receive the drug.

the drug.

The second new drug stimulates the development of white blood cells – a central component of the body's immune system – rather than red. Granulocyte colony stimulating factor (G-CSF) also works by stimulating the bone marrow, but this time to produce white blood

G-CSF is sold by Amgen as Neupogen. It is used in the treatment of cancer patients because chemotherDaniel Green looks at the latest improvements in blood products, in a continuing series on drug advances

apy damages the bone marrow and with it the body's defence mecha-

Chemotherapy patients are especially vulnerable to infection. Giving them G-CSF not only allows them to improve their defences against infection but means that more of the chemotherapy agent can be used to try to deal with the cancer.

Both Epogen and Neupogen are made by the complicated, but now well-tested, techniques of genetic engineering. Scientists analyse human EPO and identify its components. With that knowledge, they can calculate the shape of the gene that triggers the production of EPO and scan thousands of human genes to search for it.

Once the correct human gene is identified, it is put in the ovary of a hamster. The egg that the ovary later releases is capable of making EPO. It divides many times and a master cell bank is built up.

For large-scale manufacturing,

For large-scale manufacturing, cells from the master bank are nourished in a fluid. As they grow they secrete EPO. The fluid is peri-

odically removed and the EPO extracted, purified and bottled.

Amgen received its first patent for this process in October 1987. Less than two years later, the US Food and Drug Administration approved its use for kidney patients. Neupogen was approved by the FDA in 1991.

The drugs are among the most effective on the market today because they are chemically identical to natural products of the body. As natural products they cannot be patented and cannot easily be improved upon. Amgen protects its discovery through patents on the manufacturing method and the uses of the drug.

human genes

These patents are effective enough to have shut out competition and allow high prices to be that the ovary of a at the ovary ole of making times and a

These patents are effective enough to have shut out competition and allow high prices to be charged. One course of Neupogen cancer patient may need several courses.

The pay-off is that patients are far less likely to have to come back into hospital to be treated for an infection that the white blood cells would normally have fought off.

That saves money on both hospital beds and the cocktail of antibiotics that would have to be administered. The combination of high price

and potential savings to buyers translates into big profits for Amgen: the first three months of this year saw pre-tax profits of \$93.5m (£62.3m) on sales of \$345.7m. The success story has barely begun. According to analysts at stockbroker Lehman Brothers, by

stockbroker Lehman Brothers, by 2000 Epogen will be the world's best selling drug with Neupogen not far behind in third place. Their combined sales will be more than \$50n a year, roughly the level of the UK National Health Service's annual budget today.

The successes of Neupogen and

Epogen have now attracted other companies into research and development programmes. They include Sandoz of Switzerland, which has signed research agreements with North American biotechnology research centres Terry Fox Laboratories in Vancouver and Systemix in Palo Alto, California.

One of the most advanced research programmes is at British

Biotechnology, in Oxford. It is trying to combine the effectiveness of both Epogen and Neupogen by defending the bone marrow against

This can be done by first recognising that chemotherapy agents kill cancers by destroying cells that are dividing. Chemotherapy does not distinguish between cancer cells and others that are dividing, such as hair, which is why cancer patients often lose their hair.

Bone marrow contains the cells, called stem cells, that divide and develop into a range of blood cells - red, white and the platelets which cause clotting.

British Biotechnology's programme is to develop a drug that temporarily switches off the division of stem cells. The chemotherapy agents will then leave the stem cells untouched and when the therapy is finished, they can be

switched on again.

"Rather than a treatment for the damage caused by chemotherapy, it is a prophylaxis or prevention of the effect." says Peter Lewis, director of research and development at

British Biotechnology.

The company is not the only one developing a stem cell protector. Sandoz, Sweden's Astra, and T-Cell Sciences, a California biotechnology company, are close behind. The pharmaceutical industry knows that there is a huge market to be

tapped.

This is a far cry from a decade ago when Epogen and Neupogen found themselves in virgin markets. There were no products they could compete with and there were no sales forces or doctors accustomed to selling or buying treatments.

to selling or buying treatments.

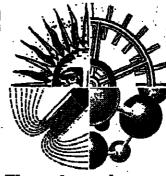

Amgen established a series of licensing deals and joint ventures with big drugs companies even though many companies were sceptical. "It was a completely novel drug," explains Paul Hooper, UK marketing director for Swiss company Roche, now Amgen's joint venture partner in Europe for Epo-

Another company, one of the largest in the US, turned down the chance to be a licensee. "We didn't recognise its potential," says a former senior executive. "Later I felt like the record company man that turned down the Beatles. I won't be making that mistake again."

The series continues next month with a look at pain killers.

### Worth Watching · Andrew Fisher

Elegant speakers make their entrance

Combining a taste for hi-fi sound with a desire for elegant surroundings is not always easy – loudspeakers can be bulky and obtrusive.

Dance London, a small UK company, has developed the Mirage speakers to help overcome this dilemma. Shaped rather like a pair of curved, squat lamp bases, they are made of durable ceramic and send out what Dance calls "all surround sound" at 360° instead of the more limited directions.

speakers.

The "sweet spot", where the listener sits at an equal distance from each speaker, is enlarged by the way the Mirage sends the sound on to a cone-shaped deflector and then out into the

Using a Danish-made loudspeaker drive, the speakers are made in the UK; they will appear in shops later this summer. The basic units priced at £230; a £199 sub-woofer (of special resin) for enhanced bass will cost an extra £199.

Staircases are a big problem for people in wheelchairs and spiral staircases present a particular challenge. TGR of Bologna in Italy has developed its advanced Explorer chair to allow users to tackle complicated stairways – especially in offices and public buildings – without any help. It works through a combination of wheels and crawler tracks, with the seat balancing antomatically to produce a level posture even when ascending or descending. Powered by

batteries and controlled by sensors, the Explorer (costing £12,000) is easily operated by a joystick.

"It makes a tremendous difference to the disabled," says Howard Daly, head of Wheelchain Corporation, distributor for the UK and parts of continental Europe. Mouth control and voice

activation features are also being developed. Wheelchoir Corporation: UK, 081-9545848.

# Vehicle caught by neural network

Neural networks, which recognise patterns rather than carrying out vastly complicated calculations, are penetrating into a variety of industrial and financial areas. Bacal, the UK electronics company, has used the technology for its new vehicle number plate registration system designed to work in the day or

Called Talon, its applications cover traffic monitoring and security operations. It was developed with Cambridge Neurodynamics, a specialist in digital signal processing and pattern recognition.

The system works by being "trained" to recognise a large number of repetitions of a set of characters. The network builds a statistical model which adapts to the features that make each character distinctive. Thus it also works well when number plates are exooked and the numbers are partly lidden or dirty.

# **EITC '94**

The European Information Technology Conference 1994

Information Technology and Transformation of the Enterprise

Organised by the European Commission DGIII - Industry

6-8 June 1994, Palais des Congrès, Brussels, Belgium

This three-day event is aimed at Information Technology (IT) users, suppliers and developers, as well as technological and industrial policy makers. It brings together high-level industrialists, leading European strategists and IT users, who will examine the effect of IT on enterprise efficiency, on new markets and on employment.

Among the topics to be discussed will be:

- ▲ IT and Enterprise Efficiency
- ▲ Information Infrastructure and New Markets
- ▲ New Markets and Employment

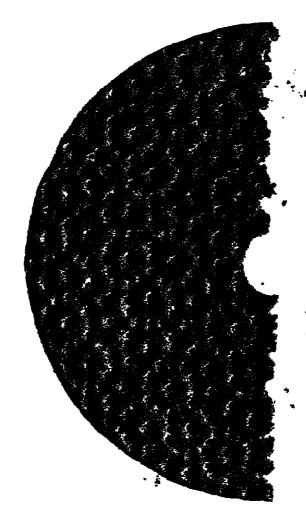

In addition to the Industry Commissioner Martin Bangemann and the President of the EU Councils of Ministers for Industry, Research and Energy, Kostas Simitis, some of the top speakers include:

Percy Barnevik, CEO of ABB; Peter Bonfield, CEO of ICL; Jozef Cornu, President of Alcatel Network Systems; Michael Dertouzos, MIT, USA; Claude Desama, MEP, Chairman CERT; Annemarie Goedmakers, MEP; Michel Hervé, MEP; Roland Leuchel, Head of Investment Strategy, Banque Bruxelles Lambert; Peter Mihatsch, Chairman of Mannesmann Mobilfunk; Luis Palma-Feria, Member of the Board of IAPMEI; Vasso Papandreou, Greek MP and Former EC Commissioner; Waring Partridge, Executive Vice President AT&T Multimedia; Robin Saxby. MD of ARM; Konrad Seitz, German Ambassador to Italy; Ian Strecker, Executive Vice President of Schlumberger; Franco Tatò, CEO of Gruppo Fininvest; Karl-Friedrich Triebold, Member of the Management Board of Bremer Vulkan; Jose Maria Vilà, Vice President of ERITEL.

During the first day of the conference, top personalities in the world of IT R&D will discuss recent technological achievements and future prospects in eight parallel sessions under the general theme *Technologies for an Information Infrastructure*. These sessions address the IT topics covered in the Fourth Framework Programme for Research and Technological Development.

A thematic exhibition which complements the conference, will illustrate the impact of the information infrastructure in three areas of activity - the workplace, mobility and leisure - and the role that the Community's IT programme for Research and Technological Development plays in its realisation.

# Almost half of Sweden chooses to bank with Swedbank.

Unlike any other branch network, ours reaches across the length and breadth of Sweden. Just part of the reason why our customer base is the largest in the country.

Every day we collect fresh information about the Swedish economy from each local bank. In this way, our size allows us to know the country and its people better than any other bank. It also enables us to make better business decisions, which in turn mean even more valuable service for our customers.

Swedbank's activities in Sweden are enhanced further by several offices around the world. They give us an essential global perspective which we combine with our formidable local banking expertise.

The ingredients which make us the first choice at home also make us the ideal partner for foreign investors wanting to do business in Sweden.

lengthy scene changes.

times he is alert to its affecting shadows: the way we see both Viola and her brother Sebastian is potent, as is the moment of their final reunion. Sometimes, however, he treats it like the merest artificial farce. The funereal cypress shadows of the text are absent. And erotic affliction, which so possesses Orsino, Viola and Olivia, is never serious.

miling charm abounds. The ending and the curtain-calls are as sweetly neat as a chocolate box. John Cunter's Elizabethan scenery is pretty but needlessly symmetrical and boxy: a tourist view of Olde England, And though Nigel Hers has written some fair songs, the taped muzak that he has provided at regular intervals makes Twelfth Night feel like a MGM musical.

That it keeps turning back into a beautiful play, both robust and tender, is largely due to a superb cast. Desmond Barrit's Malvolio, a sour Welsh Frankie Howerd of unusual force, is a triumph of comic self-importance. Liverishly he fantasises about the day-bed "where I have left Olivia" (pause, then, with lascivious delicacy) "sleeping". Bitterly he sobs out "I thank my stars I am happy". Tony Britton makes a touchingly noble Sir

player caioled into a lonely

singles match - in fact, the

quintessential Bowles gesture

is a topspin backband which

starts by his left hip and fin-

ishes above his right shoulder.

Since this denotes for him-

everything from triumph to

disaster, he can now play Wimbledon as well as Chiches-

Piona Fallerton as Eliza goes

boldly into received pronunci-

ation with wit and verve, shed-

ding her givenway vowels for

a takeaway manner. Her excel-

lent performance tempers Eli-

za's dependency with distaste,

Toby Beich. The way he gently plants a line like "She is a beagle" into the still air has the true Twelfth Night magic. There are excellent moments

too from other players, notably eloquent Olivia. But the production lets her dwindle into an ignoble silly, and it never lets Bille Brown's Andrew Aguecheek grow from his hilariously absurd beginning into a three-dimensional study of perpetually feckless adolesmanding Orsino, both virile and narcissistic; but I never believed that either love or music had overwhelmed his senses. As Feste, Derek Criffiths projects his songs clearly; but his voice is far from mellifluous, and his manner the least charming onstage.

ings about Ian Judge's Love Labour's Lost, currently at the Barbican. Truly mixed. In Twelfth Night, I love the way that, in the final scene, he suddenly beclouds the farce with Malvolio's fury. Then, after Barrit has hissed "I'll be revenged on the whole pack of you," the way he wipes an long strand of hair back across his bald pate returns us, ideally, to

I have the same mixed feel-

Just as fine are the thunder and lightning at the end, and the way Maria turns Feste out of doors - where he sings to us of "the wind and the rain". If Judge can build his understanding of these glorious moments into the whole fabric of a play, then he will be a great director of Shake comedy. Right now he is a very good one who is sometimes not good enough.

In repertory at the Royal Shakespeare Theatre, Strat-

play into the last two acts. And she is walking out on Higgins at the end.

Around the two principals, Freddie Jones as Doolittle, the "undeserving pauper", is a feast of chopped logic and handies his scenes well enough to be unpredictable. Dulcie Gray as Higgins' mother develops the over-filial relation with Higgins and presides in the "At Homes" with aplomb. Michael Denison as Higgins' pal, Pickering, gives firm but bewildered support, not least because the staging still needs to be streamlined so the actors can talk to each other and the

single man, this demure, but naughty routine later repeated by the entire group; three men arranging their hair in pigtails and behaving like giggly schoolgirls, leading into a wonderfully energetic parody of Chartie's Angels.

But Lam also gives us scenes in which sinister events are blended with an uneasy humour, as when one man fornicates with another - both are fully dressed and completely expressionless - across the stage. Scenes is an elegant dissection of fear and guilt, need and rejection. Lam entertains us as generously as he seeks to disturb, but his brand of sparse yet epic theatre gradu-ally loses its power to do either of these things as the evening wears on.

sweetly amusing: a brief, trousers-down, après-shower towel dance for a Room, Manchester on June 10 and 11.

One of the newly cleaned Sutherland Raphaels: 'Holy Family with a Palm Tree'

# Raphael's women, work and legacy

The women Raphael painted, it was observed long ago, were either his mistress or mothers. On a casual look it is the Virgin Mary, image of ideal motherhood, who dominates Raphael: The Pursuit of Perfection at the National Gallery of Scotland. This scholarly yet accessible exhibition explores Raphael's creative process through paintings and drawings. It also shows how fully he lived up to the moral ideal for a Renaissance painter of passing on knowledge and skill to younger

What is by Raphael, and what by Gianfrancesco Penni, Giulio Romano, or "the workshop"? Numerous works in the exhibition raise these questions, especially the later drawings of figures in the Loggia di Psyche in the Villa Farnesina. Here, among the nude studies, may well be Raphael's mistress, if the story is true that the only way he could be kept on the job was if his mistress stayed. But are the drawings by her admiring lover, or by assistants eagerly copying their master's wonderful way

with the female form? At the heart of the exhibition are the three Madonnas on loan from the Duke of Sutherland: the "Holy Family with a Palm Tree"; the "Bridgewater Madonna"; and the "Madonna of the Passeggio". All the preparatory drawings have been brought together from collections across Europe. Also on show is the "Madonna of the Pinks", the Duke of Northumberland's little masterpiece which has only recently recovered art-historical respectability as being truly by Raphael.

The Sutherland Raphaels are newly cleaned and conserved. The scientists' scrutiny has unearthed curious things. It seems clear that Raphael had no direct hand in the 'Madonna of the Passeggio". Penni. The composition is anyway less attractive than the other three Raphaels; St Joseph looks strangely farouche, staring back from behind a bush at his wife and child who are being humbly greeted by little St John the Baptist.

There is no discomfort in knowing that the Virgin of the lovely "Bridgewater Madonna" was at first placed in a flowery meadow, until Raphael enclosed her in a room without a view. However, it can be distinctly unsettling to discover things which an artist never meant us to know. A case in point is "Holy Family with the Palm Tree". In this lovely tondo St

Patricia Morison reviews the exhibition at the National Gallery of Scotland

Joseph gives Jesus a handful of flowers, watched intently by Mary who so often has eyes only for her baby. This St Joseph looks younger than normal, thanks to his thick grey curls. The X-ray suggests that he was originally bald and that the top-knot was added later presumably by Raphael. But why did he add it, and to please whom? This trichological riddle detracts from enjoyment of the picture and is one insight into Raphael's creative process I could have done with-

Among the unexpected things in the exhibition is "Mercury Bearing Psyche to Olympus", an air-borne confection of figures from the Loggia di Psyche by Rubens from the Duke of Sutherland's private collection. And how lovely to find again an enchanting drawing from Chatsworth, recently shown in London. It shows an ordinary mother holding a fidgety child firmly around the middle while she reads aloud.

tional move to use late copies to flesh out Raphael's ocuvre. They hang in an antercom homage from an age when Raphael was often talked about as quasi-divine. The copy of the Madrid "Madonna of the Fish" is by an restorer called Bonnemaison, alleged by Jacques Louis David to have scrubbed Raphael altarpieces with turpentine. Anyone who recrets the modern cleaning of the "Transfiguration" can compare it with the sombre bues faithfully rendered in the 1820s by one Grigor Urquhart of

Inevitably, the exhibition conjures up the spectre of absence. Since 1946, the three Raphaels have been in the gallery as part of the Ellesmere now Sutherland, loan. The Sixth Duke is now 79: to lose the loan would be a devastating blow to the NGS and, if it went overseas, to Britain's national heritage. The Sutherland pictures are exempt from inheritance tax while they are on public view. A private treaty sale would therefore avoid the demand for payment of inheritance tax exe the past. If this were allowed to happen, with an annual acqui-sition budget of only £1.2m the NGS would be in a hopeless position to secure the paint-

The Raphael exhibition highlights the uncertainty hanging over the residue of one of the greatest private art collections ever formed in Britain. As early as 1806, an ancestor of the present duke allowed the public to visit the huge collec-tion at his London residence on St James's Square. For close on two centuries, then, these great paintings have been in the public eye, giving untold pleasure. Who can predict whether the same will be true a century from now?

### ART AT WOLFSBURG

opening of a new museum at Wolfsburg, the town in Lower Sexony which is home to

Socialism, Wolfsburg earned a

recutation in the postwar era as one of the Gastarbeiter capitals of West Germany. Now its image appears to be changing. Its location near the gives it a strong geographical map of Europe. And the new traditions of industrial paironage of the arts.

The museum was proposed in 1987 by the former president of Volkswagen, Carl Hahn, after the establishment of the Volkswagen Art Foundation a private trust derived from the <sup>fortune</sup> which a Munich couple,

Christian and Asta Holler, built from shares in the Volkswagen Foundation has footed the DM70m (£28.2m) cost of building the Kunstmuseum, and will also pay its running costs. The eum has three alms - to establish in Wolfsburg a collection of international contemporary art, to encourage

the cultural education of the local

and wider community, and to

promote exhibitions of

mainly British cast.
Originally inspired by Lam's observa-tions of gay men in the changing

rooms, clubs and saumas of Europe -

and by his own experience of these sex-

ually-charged meeting places - Scenes from a Men's Changing Room is now set

on a blank, open stage. Here, the eight performers (all men) use minimal props

to suggest a catalogue of settings - a

cafe, cinema, hospital - but it is

through the patterns and intensity of

their physical actions that we begin to

recognise a variety of social situations

and the environments in which they

international appeal.

The opening exhibition, devised with the help of the Basie Kunstmuseum, is devoted to the early work of Fernand Leger, covering the Cubist, mechanical and early Classical phases of his career from 1911 to 1924. More than 70 oils and a dozen works on paper are supplemented by examples of

his work as a designer for the Baliets Suédois and his contribution to experimental film. The significance of the exhibition lies in the way it acknowledges the contribution of technology to 20th century society - an appropriate choice for the new museum, which has been described as one of the most technologically advanced in

Europe. The Leger show, which runs till August 14, is supplemented by items from the museum's already impressive collection of contemporary art.

Ends Nov 27. One of the lewels of the permanent collection, Jan van Eyck's Annunciation, has returned to public view after a two-year restoration.

fter three years of bitter wrangling and court actions, Germany's Bundestag, the lower house of parliament, has agreed measures to compensate former property owners in east Germany.

Approval by the Bundesrat. the upper house, could pave the way for speedier investment in the east, which has been held up by unresolved questions over property rights.

Under the terms of the unification treaty of 1990, those whose property was confiscated by the Nazis between 1938 and 1945 or by the Communists between 1949 and 1990 are entitled to restitution or compensation. The law caused havoc. Many east Germans who thought they had legally acquired their homes after the establishment of the former German Democratic Republic in 1949 were faced with former owners returning and, in some cases, evicting them. Those claimants who did not want their property back could seek compensation. Yet for more than three years, the government has been unable to agree on the levels of payment.

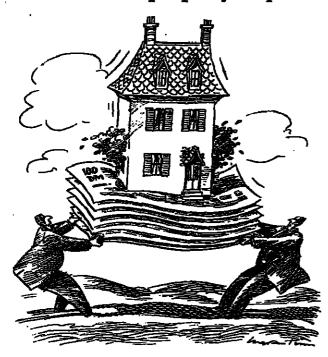

Under the new measures individuals would be entitled to compensation based on the value of the property (including houses, shops, farmland) in 1935. The figure would be multiplied several times, depending on whether the property in question is simply land, or includes housing or a business. In addition compensation would be issued in the form of government bonds, not redeemable until 2004.

"Dispossessed" property owners may complain that the level of payment neither reflects the current market value of the property, nor compensates for the amount of income lost over the past 55 years. But their complaints pale when compared with those of the "'45-49ers".

The "'45-49ers" comprise property owners whose land was expropriated by the Soviet authorities which, between 1945 and 1949, administered east Germany. Many belonged to the Prussian aristocracy and supported Hitler during the second world war. Others, however, joined the German resistance movement. As the Russians consolidated their grip on the east, many were either sent to prison camps, given two days to leave their homes, or banned from within 14 miles of their property. Most of the 14,000 families which were forced to flee settled in west Germany. Their land was divided and parcelled out to

Germans escaping from Poland and other east European coun-

In a reunited Germany sev eral hundred families now want to come back. But under the terms of the unification treaty, they have neither the right to compensation nor res-

The West German govern-ment, along with Mr Hans Modrow, east Germany's last Communist party leader, and Mr Lothar de Maizière, its last prime minister, refused any right of return or compensa tion for those dispossessed between 1945 and 1949. They claimed in the Constitutional Court in April 1991 that the price of Soviet agreement to German unification was Bonn's unquestioning acceptance of Moscow's '45-49 administration of east Germany, including its expropriation pol-

This claim is challenged by former east German property owners. "There is simply no evidence of these preconditions [to unification]," said Mr Albrecht Wendenberg, who is trying to regain his property in the eastern state of Saxony-

Some have formed limited companies, enabling them to buy back some of their own land from the Treuhand, provided they invest in the region. Others have obtained 12-year leases from the Treuhand in the hope they will have the certion to have effort the lease. option to buy after the lease

Some families say the compensation proposals continue to treat property owners unequally before the law. Ms Anna-Tatiana Bauer sald her family does not even have the right to reclaim the family church, or the graveyard. "It is truly a disgrace," she

But the "'45-49ers" cannot count on public support. The government cannot afford to ensate them for the loss of their property. Critics oppose the return of the "Junklandowners, as they are pejoratively known. They argue that their passivity allowed the rise of Hitler. East Germans generally want nothing to do with them because logical indoctrination has taught them that every Junker is a feudal aristocrat or a Nazi

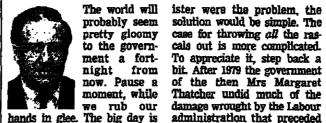

ronically, it is the far-right Republican party in east Germany which is playing the "Junker card" in the run-up to the local, state and federal elections. Mr Lothar Bisky, the head of the social-democratic Party of Democratic Socialists, the successor to the former east German Communist party, says it would be dangerous to ignore

their actions In towns throughout Meck-lenburg and Brandenburg, and in Berlin, the Republicans are dropping leaflets. Their message is clear. They tell east Germans that their property is threatened and could fall into the hands of west Germans. The Republicans are opposed to any restitution and the return of former property owners, blaming unification for this trend. A recent leadet proclaimed: "The Republicans are patriotic. We are the only patriotic and social German party which stands for full solidarity of the east Germans and the protection of their prop-

"We don't know how big their support is," said Mr Bisky. "But property rights is one of the planks of their platform. I am afraid of them, because I feel we have completely messed up the whok question of compensation and restitution. But it is too late to redress the mistakes of unifica-

# Throw the rascals out

now. Pause a moment, while we rub our hands in glee. The big day is Friday June 10. The Tories expect to wake up on that morning to news of the loss of their formerly safe seat of East-leigh to the Liberal Democrats. Better vet, they may find that their candidate, their sacrificial lamb, has been beaten into third place behind Labour. The weekend papers will be full of talk about alternative leaders of the Labour party, perhaps spiced by musings on the future of the prime minister.

The results of the elections to the European Parliament will follow. We will see the great match taking shape: a revived opposition vs a flag-ging government. It may become harder than ever to believe that the Conservatives can recover sufficient support to win a fifth general election, even in the nearly three years still available to them.

Good. They deserve to be thrashed. I say this in the electoral rather than the Singaporean sense, you understand. Those of us who doubt the efficacy of corporal punishment should not change our principles, not even in the case of Mr John Patten, the education secretary. Mr Patten's sense of honour may be measured by his retailing earlier this week of what he said was said to him in a private conversation in a railway carriage. So much for the gentleman who preaches to the nation's children about moral standards. This is the kind of thing that gives hypocrisy a bad name. It is not, however, a reason for encouraging the Conservatives to leave office. If the bad

manners of one particular min-

case for throwing all the rascals out is more complicated. To appreciate it, step back a bit. After 1979 the government of the then Mrs Margaret Thatcher undid much of the damage wrought by the Labour administration that preceded it. She vanguished the trade unions, initiated the rolling privatisation of industry, and taught us that simple bookkeeping is a necessary skill in all walks of life and all institutions. Her successor has curbed inflation, maintained Britain's position at the Maastricht negotiations on the European Union, and estab-lished rapport with Dublin on

Northern Ireland. These achievements, among others, deserve recog-nition. The balance of advantage has, however

the future of .

turned. Today the prime minister is struggling to manage an unruly coalition of what should be separate parties. The government is unable to do very much, beyond blather. It promises a green paper on this and lists existing policies in a white paper on that. Here a charter, there an inquiry, everywhere a working party. It

is a ministry of paper initia-tives, a taxpayer-financed agency for self-advertisement. Civil servants are unwilling to propose very much, and determined not to write down what they do discuss. The urge to further radicalism may be genuine, but the performance is disappointing.

If that were all, there would be little cause for complaint. The government could be said to be in a state of do-nothing

equilibrium, a minimalist's latest evidence of this comes in ideal. Sadly, that is not all. a week when all three national "Do-nothing" is often a harmful choice. Do-something can be worse. Local government has been hobbled. The behaviour of parliamentarians has brought political life into disrepute. Ministers spend too much of their time dishing out money and jobs to favoured individuals, companies or organisations. Fifteen years of continuous office has resulted in the creation of a patronage state as described in a report published on Monday by a pair of pressure groups, Charter 88

and Democratic Audit. The report suggests that there is now one executive quango for every 10,000 population, and that

these bodies Ministers spend are responsible too much of their for nearly a third of total time dishing out public spending. It may be right, if not money and jobs to favoured precisely so. Let us halve individuals, the authors' companies or figures to elimorganisations chance of exag-

geration. The picture that remains is startling. Britain is replete with opportunities for patronage, secretive deal-making and good old fashioned corruption. We do not need a democratic audit to prove this. Observe. There is the health secretary, arms outstretched, guarding every health service trust from pub-iic acrutiny, arousing suspicion by the zealousness with which she defends the secrets of these spenders of our money.

any

The Conservatives have torn the heart out of the unwritten British constitution. The democratic checks on executive power have been replaced in the name of customer choice. What the latter phrase often means is placemen's self-pres-

parties have published manifestos for the elections to the European Parliament. Labour and the Liberal Democrats balance their views on possible reforms of EU institutions with programmes for the restoration of civic life in Britain. Both summarise their proposals for domestic constitutional reform in their Europe manifestos.

A CONTRACTOR OF THE PROPERTY O

Not the Tories. They will have none of it. They talk as if subsidiarity stops at Calais. They cannot win elections to town halls, so they emasculate local authorities. They are rejected by the Scots, but will not look at Scottish self-gov-ernment. "A separate Scotland would be relegated to the lower divisions of Europe," says their

This refusal to contemplate any improvement in our constitutional arrangements applies to all areas of public life. They shy away from reform of the House of Lords, although individual Tory peers are more sensible than that. Simple improvements to House of Commons procedure make little headway. Several suggestions of reform of the way bills are prepared have been made; none accepted. The consequence is that more legislation is made in amendments than

in initial bills. Conservatives need to think these matters through. They have run the country as if they were in office forever. They govern by ever-increasing centripetal force. Finding out what an unscrupulous administration of a different political colour could do with the powers ministers have accumulated for themselves would teach them a lesson, at our expense. We must hope that Labour, which is still an unappetising alternative, makes itself electable before we have to choose. \*Ego trip, 19.95, from 3-11 Pine Street, London EC1R 0JH

# Cost of executive share options | Confucius | Confuciu should be assessed on issue

Sir, Your statement that "options defy precise valuation" ("One option they don't with the rather precise valua tions of London's financial futures and options exchange (Liffe) Equity Options printed each day in another part of your newspaper. The Black-Scholes option valuation model has been used for more than 20 years, and can easily be pro-

grammed into a pocket calculator or a simple spreadsheet.

The only element that makes executive share options so difficult to value is the lack of information regarding the option exercise price, maturity date and current share price when issued. This means attention is now focused instead on the information revealed when options are exercised (the large payouts seen in the cases of BAe and LWT).

Were quoted companies required to provide sufficient information to allow executive share options to be valued when issued, the cost of granting such ontions would then he clear to shareholders. Mike Staunton, 138 Regents Park Road,

From Mr David Rhoads Sir, Andrew Jack's article on US efforts to regulate executive compensation provides a resounding wake-up call for UK companies.

Based on the US experience unanswered calls for the selfregulation of executive pay invites far more onerous steps by regulators; for example, poor disclosure practices led the Securities and Exchange Commission (SEC) to require quoted companies to present extensive data for the highestpaid executives. Meanwhile, a perceived lack of connection between executive pay and per-formance prompted the Clinton administration to eliminate the tax deductibility of "non-performance based" pay in excess of \$1m for top executives of quoted companies. Finally, a

to the US Financial Accounting Standards Board's current efforts to impose an earnings charge for executive share Accounting Standards Board and statements by the Associa-tion of British Insurers/National Association of Pension

Funds are mild by comparison. Self-regulation through the voluntary enhancement of pay disclosure represents an attractive way to diffuse growing regulatory pressures. Subjecting pay practices to "the light of day" does wonders to limit abuse. In addition, we have found that shareholders react favourably to the disclosure of well-designed, performancebased executive pay schemes. Finally, an earnings charge for share options is a bad idea. Share prices already incorporate expectations concerning

executive share option awards. David Rhoads, manag<del>i</del>ng director Strategic Compensation Associates. 19-25 Argyll Street,

# Taiwan

From Mr Charles Edmond. Sir, in "Changing cultures of capitalism" (May 23), Samuel that "few Taiwanese entrepreneurs are steeped in the Confucian classics".

I beg to differ. On my first day of company visits in Taiwan, as a member of a party of foreign investors, I met the chairman of Tatung Co - one of Taiwan's largest and most progressive corporations. He opened the proceedings by presenting each of us with a copy of the Analects of Confu-- with each tract set out in English and Japanese as well as the original Chinese. This was presented as the best duct business in Taiwan. It has certainly been invaluable to me in providing insights into economic life in Taipei. Tatung also endows its own high school and university.

Many local investment analysts and economists - whose London counterparts have been termed "teenage scribblers" - have impressed me with their knowledge of the Analects.

Charles Edmond, Yung Kau Securities, 3/F Fu Shin Road North. Taipei. Taiwan

# Big companies do pay up

From Mr David Heppenstall. Sir, I refer to the problem of late payments to UK compa-nies. I am financial director of a medium-sized business, and I have also worked in credit control in large and small compa-

My experience is that the perception that it is large wellestablished organisations which hold back payments to small business is by and large mistaken. This makes good press. But the problem is usually one of the slow-paying smaller customer, sometimes operating on the margins of solvency. This being the case, I am sceptical that much would be achieved by legislation.

Reasonably prompt and regular payment can normally be expected from the large customer, providing its invoicing requirements are followed. It is in this area that the small business, having less skilled office staff and without the help of a computer system, is often defi-

# Latvia an equally good role model

From Mr Maris Ozols. Sir. Professor Steve Hanke's unqualified praise of Estonia's economic reforms (Letters, May 23) and his exhortations that they be used as a model for Russia, cannot be left with-

Latvia. Estonia's neighbour has adopted a contrary approach with regard to the stability of its currency. The Lat is free floating, its value having been set (as was its presor's, the Latvian rouble) by the supply of Lats and western currency. For more than a year now, the Lat has appreciated against western currencies because of an oversupply of dollars. At the same time, Latvia has achieved the lowest inflation in the Baltics (34.2 per cent, March 1993-March 1994). Conversely, Estonia's inflation rate for March 1994 jumped to

history of inadequate share

scheme disclosure contributed

As for the Estonian policy of shadowing another currency, Nigel Lawson, as UK chancel-lor, made the mistake of also shadowing the D-Mark for too long and when Britain joined the ERM, after a strained period, the pound received its come-uppance on Black

Wednesday.

The Estonian economy is the most successful of the former Soviet republics but, similarly to Latvia at present, it is suffering from an overvalued currency leading to difficulties with exporting and an increase in imports. In Latvia's case, when it comes to paying for imports, payment will be in western currency, the purchase of which will tend to lower the exchange rate for the Lat. Estonia, with its fixed

8.9 per cent, higher even than rate, will have less room for Russia's. As can be seen then, there is

more than one way to skin a cat and Estonia's way will not necessarily bear fruit for Mr Viktor Chernomyrdin and Russia. One should not forget, either, that both Estonia and Latvia's decisions to convert to their own currencies were frowned upon by the International Monetary Fund at the time but the Balts proved that even holy cows can be wrong, If Russia has enough confi dence in its own policies, it should do whatever it thinks is right and turn a blind eve to

the critics. Maris Ozols, (Riga Bureau Chief, Baltic Independent, March 1983-Jan

1984), 11 Heathfield Road London W3 8EH

# CAP fraud is too costly to pursue

From Mr Anthony Rosen. Sir, Like your correspondent

Peter Marsh (European News Digest, May 25) I, too, heard the House of Lords European communities committee question Mr Jo Carey, former president of the European Court of Auditors.

It was all too clear that the noble Lords do not yet understand the two main reasons for the escalating Common Agricultural Policy frauds.

First, fraud becomes ever easier given the lax controls, exacerbated by the May 1992 McSharry (so-called) reforms which have now brought fraud "down to the farm".

But second, and dominantly, there is no incentive for any European government to expose fraud by its own nationals. The present EU rules mean that upon exposure of the fraud the government concerned has to make full repara-

tion to the EU and then try and reclaim this from the fraudster. Politicians are thus content to believe that CAP fraud amounts to "only" £150m rather than the actual £6bn as estimated by Mr Carey's successor as court president. Anthony Rosen, chief executive, Feenix Farming Rosehill, Arford, Headley.

# FINANCIAL TIMES

# India's rupee dilemma

India is caught in what has become a familiar dilemma for liberalising developing countries. An unexpected inflow of foreign capt-tal is making it difficult to hold down the exchange rate. The choice in the short term lies between resurgent inflation and curtailment of fragile export success. So far, the government has, in effect, chosen to risk the inflation. It must find a better solution. In the financial year ending March 1994. India received some \$4bn in portfolio capital, along with \$600m in foreign direct investment. It also registered a small current account surplus, partly because the value of exports rose 21 per cent in US dol-lars and partly because imports stagnated. The inflow helped produce an increase of \$8.7hn in foreign exchange reserves, as the authorities struggled to keep the rupee at 31 to the US dollar.

For a country that recently stood on the brink of default, increased foreign exchange reserves are welcome, but not in excess. Monetary growth has risen from a recent low of 5 per cent in the year to May 1993, to 18 per cent in the year to Jamary 1994. This has helped raise inflation to the unpopular rate of 11 per cent. Holding down the exchange rate through foreign exchange intervention can only be a temporary expedient. Unless the monetary effects are sterilised, the real exchange rate will appreciate through inflation, rather than through upward adjustment of the nominal value of the rupee. There can be no enduring advantage in that, particularly given the damage done by inflation in India.

Imports increase

reigns in

Laiwan

The dilemma might vanish spontaneously. But provided reforms continue, this is unlikely to result from rapid dwindling of the capital inflow itself. Much more desirable would be a substantial increase in imports, as economic growth accelerates. Faster growth of industrial output was already observable by late-1993. This should continue. Nevertheless, the ministry of finance expects the current account deficit this financial year to be only US \$1bn-\$2bn, insufficient to offset a capital inflow like last year's.

the attractiveness of the capital inflows. One possibility is to reduce the return on deposits by non-residents; another is to restrict the access of Indian companies to foreign capital; yet another would be to restrict inflows of foreign portfolio capital.

All such measures would be undesirable. India's potential as a destination for foreign capital has, after all, barely been scratched. Vast and poor, India needs to find ways of using such capital. This is particularly true of foreign direct investment, actively encouraged by the prime minister himself ear-

Faster reduction

If the inflows were neither to cease spontaneously nor be stopped, attempts could be made to curb their effects. One option, currently being tried, is to curb monetary expansion through changes in cash reserve requirements. Another is to try to sterilise the inflow through open market operations by the Reserve Bank of India, the central bank. Best of all, however, would be to

see the inflow as both reward and opportunity. A faster reduction in the fiscal deficit than that planned by the finance minister, Mr Manmohan Singh, could help offset the inflationary effects. Above all, accelerated import liberalisation would directly absorb foreign exchange. The central government faces a dilemma here, because customs duties contribute 40 per cent of its revenues. The solution is a reform designed to increase imports, along with changes to the fiscal system, to reduce dependence on customs duties.

It would be a massive policy failure for India to be unable to absorb a few billion dollars, without letting exports be crowded out or suffering from needless inflation. These resources must be absorbed in a non-inflationary way, instead. The outside world has become increasingly concerned about the will of the Indian government to sustain stabilisation and press on with radical reform. Mr. Singh has recently restated both commitments. How the government copes with the opportunity presented by the present glut of foreign exchange will help show whether it is to be taken seriously.

Efforts could be made to lower abour looks for a leader

Labour's leadership contest will be gripping for reasons beyond a sporting interest in the fate of well-known politicians. The winner will take over a party well ahead in the opinion polls, following a selection process democratised to the point that it is rather like the primaries of the United States. Just as those produce potential presidents, so the Labour primary will produce a potential prime minister.

It is therefore remarkable that the party has so far conducted itself with such uncharacteristic restraint. Potential candidates have been asked not to declare their hands until June 10, the day after the European elections. That leaves 40 days for open canvassing before the results are announced on July 21. This has not prevented anyone from campaigning behind the scenes, but the delay of a few weeks before the contest formally begins may be salutary. It has encouraged most supporters of the aspirants to conduct themselves with decorum. The electorate may be spared the dogfights that attended the selection of Mr James Callaghan and Mr Nell Kin-

This is a credit both to the leg-acy of party unity left by the late Mr John Smith and to the competence of the acting leader, Mrs Margaret Beckett, Mrs Beckett has also persuaded the party's national executive to call a concurrent contest for the deputy leadership, a post she won in tan-dem with Mr Smith. She will therefore attract votes for apparently putting party before self. This should all but guarantee her re-election as deputy leader, and win her some support for the idea that she herself should be the new leader, should she enter the fray. The contest, and the debate on the party's future, is wide open.

Blair ahead

It is a debate that should be pursued with vigour. Various polls have confirmed that Mr Tony Mair is the most popular of the undeclared candidates. His lead is deserved, but it would be wrong to arrange a mere coronation. Mr Blair is insufficiently tested in the heat of close fought battle. He has stood his ground for a radical view of trade union law, he has brought credibility to Labour's stance on crime and he has worked hard to

identify an underpinning theme for Labour, based upon the maximum freedom for individuals within the framework of shared community interests. Little, however, is known of his approach to industrial, financial, or economic policy, not to mention topics such as foreign affairs and defence. Nor has Mr Blair ever moved into the open with views about the potential for collaboration between Labour and the Liberal Demo-

True debate

A potential prime minister need not be possessed of detailed pre-scriptions for every problem, but he or she does need clear indication of the positions of principle from which to start every discussion of government action. On too many issues, it is unclear where Labour stands. Has it resolved its internal differences? Is it as free of excessive trade union influence as, say, the German social democrats, or the US Democratic party? What kind of European vision will it pursue? Where does it define the

limits of the state?
These and other questions must be addressed in the leadership contest. Labour needs the advena-lin of true policy debate, if it is to excite voters rather than stand as the passive recipient of their contempt for a divided Conservative party. The candidates have been listed as of the left or right persuasion, or the traditionalist or moderniser wing of the party. Such labels can be useful, but they do not cover the complexity of the personalities involved. As shadow chancellor Mr Gordon Brown has sought to rid the party of its ancient penchant for devalu ation, high taxation and high spending. Yet he still speaks as if he were a traditionalist with roots in the old left. Mr Robin Cook is a candidate of the left, but his clever wit and sharp tongue can give his pronouncements a market flavour. Mr John Prescott is a traditionalist who enjoys mocking the

If Mr Blair is to win both the leadership and a subsequent general election he must demonstrate that he has a substantial, modernising vision, alongside the courage to take risks. And he must carry the party with him. Labour will serve no one's interest if it elects only a telegenic front man.

arlier this year Kashima Oil, a Japanese company, found that it had lost \$1.5bn in foreign exchange derivative trading. Germany's Metaligesellschaft lost \$1.4bn in oil derivatives, while US consumer products giant Procter & Gamble lost a more modest \$102m on interest rate contracts. Hardly a week goes by without another expensive mishap in the use of derivatives – instruments such as swaps, futures and options whose value is "derived" from more con-ventional financial assets.

Such stories explain the bad press received by derivatives traders. They appear to strengthen the case of the US General Accounting Office, which last week called for tougher regulation to address gaps in the system. Nor do the counterarguments of Federal Reserve chairman Alan Greenspan on Wednesday seem likely to damp the fear in Congress that derivatives are a multibillion accident waiting to over-

whelm the financial system.

Are the fears justified? And how cisely does the trade in deriva tives change the way the monetary and financial systems operate?

Where monetary policy is concerned, the chief question is whether widespread hedging deprives interest rate changes of the impact they used to have in a derivative-free system. Since deriva-tives trading is, from a macro-economic perspective, a zero-sum game, the issue would not arise if the trade were purely domestic. For every trader who hedged, there would be a counterparty with an equal and opposite exposure.

But the market is global, making

it possible that an increase in US interest rates might, for example, produce a weak response in the US, while tightening policy in Japan. This would happen if Japanese institutions proved to be net insurers of their US counterparties egainst such a rise.

Yet generalisations on this score are fraught with difficulty, not least because so many other factors affect an economy's sensitivity to interest rate changes. And in prac-tice no one did predict the global market shake-out wrought by a mere quarter-point increase in US rates in February.

The speed and extent of the bond market plunge may have been compounded by the use of derivative instruments, which can be used to assume risk, as well as to reduce risk. Their unique characteristic is the ability to create exposure to a market cheaply, for either purpose, in terms of the investor's cash outlay - leverage, in a word.

But the market crunch in Febru-ary primarily reflected a misplaced unanimity of view about market trends, magnified by old-fashioned leverage in the shape of bank borrowing. Investors experienced what John Heimann, a former US comptroller of the currency now resident at Merrill Lynch, describes as a worldwide margin call.

At the micro-economic level the most striking feature of derivatives is that they have grown like topsy (see charts) because they satisfy a need. Following the break-up of the Bretton Woods fixed exchange rate system in the early 1970s and the egulation of banking, the task of stabilising markets has, in effect, been privatised. Banks, corporations, investors and governments have to insure against volatility.

Yet the task of providing insurance to end-users — those who seek to hedge the risks that volatility poses for their business - has increasingly been complemented by the explosive growth of proprietary trading, dominated by a handful of giant commercial and investment banks, a phenomenon explored in an earlier article\*.

The joy, from the banks' point of view, is the sheer extent of the potential for hedging, especially in the over-the-counter markets where banks offer customised (and thus high-margin) products to end-users. Scope for growth outside formal exchanges, says Leo Melamed, a founding father of the Chicago financial futures markets, "is limtted only by the imagination".

Derivatives trading thus provides replaced at close to its fundamental

Is the fear that derivatives are a multi-billion accident waiting to happen justified? John Plender investigates

Through a market, darkly

an answer to two of the banks' biggest problems: the loss of large corporate clients after the third-world debt crisis and the blow to the profitability of their conventional business arising from the globalisation of markets, rapid technological change and financial deregulation. The margins in orthodox financial intermediation - deposit-taking and lending - are now woefully thin and companies are increasingly reluctant to pay large fees for

investment banking services.
"I invite anyone," says Salomon
Brothers' chairman and chief executive officer, Deryck Maughan, "to point to a fee that's gone up in the past 10 years. Fees only decline. If adequate returns to capital are to be maintained, it will be a trading

In this competitive maelstrom where frenetically mobile capital returns, off-balance sheet derivatives trading is the equivalent of alchemists' gold. Institutions can offer a pure broking service. Or. more profitably, they may put the deal on their own books and look for a counterparty with offsetting risk management needs. At one end of the proprietary

spectrum are those who do low-risk, high-volume arbitrage business, taking a small margin from balancing the odds like the bank in a casino. At the other are those who take large speculative positions, hedged in varying degrees.

The risks are little different from those traditionally run by banks and insurance companies. They include market risk (vulnerability to fluctuating prices); counterparty credit risk (the threat of default by the other party to the contract); liquidity risk (where the financial instrument cannot quickly be value); and operational risk (failures of internal control, including computer systems or fraud). Yet many of the larger losses incurred to date, such as those on local authority swaps in the UK, have stemmed from legal risk,

where one party was not authorised

to conduct such business. The worry about derivatives lies less in the nature of the risks being run, than the wider market context, which is dangerously opaque. The report of an internal working group of the Bank of England concluded last year that the unsupervised status of some of the large players in the system "does represent a super-

Disclosure practice has lagged behind market developments, resulting in balance sheets that have been drained of meaning

visory hole at the very heart of the derivatives markets". That looks prescient in the light of the scale of derivatives dealing by unsupervised hedge funds that has become apparent this year.

Note, too, that much of the US investment banks' derivatives dealing is conducted through unsuper-vised, special-purpose subsidiaries, to which the credit rating agencies have granted higher ratings than those of the parent bank. Some cantral bankers question whether this artificial structure, despite numerous inbuilt safety devices, would stand up in a financial fire-storm. Still more striking is the absence of adequate information about counterparties. Disclosure practice has lagged behind market develop-

glomerate move into marketmaking. Yet it is rarely made apparent to shareholders or creditors whether derivatives are being used to hedge or to speculate. All that is clear, says one leading US derivatives trader, is that the profit-centre

mentality always leads to trouble. An accountancy profession that is increasingly preoccupied with making money out of consultancy has been slow to respond to the biggest challenge to historic cost accounting since inflation accelerated in the 1960s. The problem is that derivatives incorporate big assumptions about the future. Options, in particular, are difficult to value since, as their name implies, they are options that may or may not be exercised not firm commitments to deal at a

ments, with the result that balance

sheets have been drained of mean-

ing. The creditors of Kashima Oil."

for example, might have thought

that they were dealing with a com-

tions in all prices. Yet it turned out

to be a foreign exchange dealer,

centre have, in effect, taken a con-

that wiped out its capital.

fixed future price. The discipline that the big banks have invented to deal with such problems is "marking to market" writing commitments up or down in line with market prices. Yet with over-the-counter derivatives, there is no real market. Instead there are complex computer valuations based on assumptions about probability, volatility and future costs. William

McDonough, president of the Federal Reserve Bank of New York, worries that market prices may not fully reflect the illiquidity of the more complex derivatives. Certainly experience has shown that liquidity in over-the-counter markets can

evaporate in a panic.

In this twilight world everyone depends heavily on the rating agencies. Yet Moody's, for one, admits that a large proportion of outstanding contracts are too new for it to feel sure that the risks are low. Balance sheets full of derivatives. ance sheets full of derivatives appear more liquid than ones full of conventional bank loans. The credit risk is only a fraction of the notional amount of the derivatives (see table). But there has to be a question mark over the derivatives traders' capital adequacy until the business has been tested over a longer period - and a worry that traders are relying on the presence of a central bank lender of last resort as they take otherwise excessive risks.

The system of checks and balances within individual organisa-tions is crucial. The big players, most of whom follow the risk management recommendations of the Group of 30 banking think-tank, have spent heavily on systems and skills. The investment appears to have paid off in the upheaval of the past three months when arithmetical assumptions about correlations between markets broke down. At Bankers Trust, a derivatives market leader, more was lost in the cash markets than in derivatives, says vice-chairman George Vojta.

ost central bankers claim that the probability that the mispricing of risks in derivatives could lead to a systemic shock is low, but cannot be ignored. They also worry that lack of information about exposures could exacerbate a financial crisis; and that complex derivative linkages across global markets could then make the coutagion hard to contain. The General Accounting Office, meantime, questions whether it is appropriate for heavy proprietary trading in derivatives to be supported by insured deposits, which may encourage par-ticipants in excessive risk-taking.

The more obvious threat is simply to individual firms, especially those at one remove from the mainstream. The failure of Kidder Peabody's senior management, auditors and traders to detect the phoney profits declared by top trader Joseph Jett was an astonishing collapse of corporate governance. Such problems are acute where traders' performance is assessed for bonus purposes over shorter periods than the life of the outstanding derivative contracts which they have put on their firm's books.

As Martin Mayer at the Brookings Institution think-tank points out, risk-shifting instruments also have a way of pushing risks on to those least able to absorb them. This is born out by Douglas Morris, senior policy adviser to the comptroller of the currency. He points to a US bank with only \$200m of assets which acquired a structured note carrying an exposure to the swings of the peseta and D-Mark against the dollar. After adverse swings, the note yields no income and has lost a fifth of its value.

That is symptomatic of the enormous conflicts of interest built into a system in which own-account trading is pervasive. As a leading banker in the Euromarkets puts it. with only mild exaggeration, 90 per cent of the work of big investment banks is now unprofitable and serves only as a loss-leader for highly profitable proprietary trad-ing. Caveat emptor is thus a categorical imperative for end-users.

It would make no sense to protect Procter & Gamble. Handling the banks is a more difficult matter. Derivatives are a valuable addition to the financial armoury. The real problems, both for individual banks and the system, are about opacity, leverage and lack of managerial competence. Central bankers will have to be on their mettle if that potentially lethal combination is not to lead to trouble. \*Financial Times, May 18

# Many holes in one

Seve Ballesteros may be miffed that having brought the 1997 Ryder Cup to Spain, the biennial international golf match staged between Europe and the US will not be played on his own Sancti Petri course near Cadiz. But Spain's Foreign Ministry is as pleased as punch.

Valderrama, the chosen venue, is home to one of Spain's secret diplomatic weapons in its long-running dispute to retake Gibraltar from the Brits. Sotogrande, the huge Mediterranean luxury estate that surrounds the Valderrama links, is next door to Gibraltar, and is tempting an increasing number of golf-crazy Gibraltarians to desert the British fastness.

Moving into a Sotogrande

mansion gives immediate access to three golf courses, including Valderrama, and two polo grounds as well as rubbing shoulders with the Cartiers, Hennessy's and with Valderrama owner Jame (Jimmy) Ortiz-Patiño whose grandfather was the king of Bolivian tin mines. Shares in Sotogrande shot up

to a year's high on news of the Ryder Cup win. All that is required now is for Madrid and London to settle their historic squabble and end a ban on domestic flights from Spain to the Rock's airport. It is not only Seve and his

golf-crazy father-in-law, Emilio Botin, chairman of Banco Santander, who want to avoid a long drive to the Valderrama links. Expect an early breakthrough on the diplomatic front.

Softly, softly

Lord Lawson's desire to secure the secretary-generalship of the OECD seems to have provoked an uncharacteristic outbreak of diplomacy on the part of the former British chancellor, if his performance yesterday at the Royal Institute of International Affairs is anything to go by. Even Walter Eltis, a free-market

guru from the DTI, couldn't get him to blame Europe's high unemployment on its hopeless industrial and social policies. "People do have a choice whether to reap the rewards of their efforts through more generous social provisions, or by having more money in their own pockets. Lawson knows he needs the votes of those dreadful high taxing, high-spending, interventionist Social-Christian-Democrat European governments.

Then there is the tricky little matter of the highly unflattering portrait he paints of the OECD in his memoirs. The strictures were "perhaps too harsh, but I believe they contained a kernel of truth". Anyway, he had been referring not to the diligent economists, but to the ministerial meetings (like

(EMX)

the one next month that may or may not elect him). Given half the chance, he would "find a way of making those meetings more worthwhile".

Out of the can

■ To veterans of the international tin crisis, Bruce Leeming will be a familiar name. The former managing director of Rudolf Wolff one of the London Metal Exchange brokers much mauled in the tin crisis of the mid-1980s, quit his post in acrimony at the time.

Now he is about to burst on to the world in what he hopes will

be a controversial new guise. His first published work, An Anger Bequeathed, is due out next week and pretty steamy stuff it is, too.
 Billed as "a novel of lust and high ideals", it tells of Harriot (sic) Murray, a highly competitive and sexually voracious woman seeking revenge for past exploitation by

Leeming - who has written several unpublished novels, including a libellous thriller about the tin crisis, and copious halku poetry - drew on family history for his new ocuvre. But he says Harriot is "wholly imaginary" and insists that she bears no resemblance to anybody at the I.MK. nest or present.

Appetite for war ■ Good food and drink can help

the delicate process of negotiation, in business as in diplomacy - but surely entertaining the warring Bosnian factions at the famous Père Bise restaurant in Talloires is going a bit far?

The three Bosnian delegations - Serbs, Croats and Moslems together with the five-nation group from the US, Russia, Britain, France and Germany - have requisitioned four top hotels in the picturesque resort on Lake Annecy. None of this comes cheap. Dining out at Père Bise can cost up to £100 a head

- and that's without wine. Talloires was chosen ostensibly because the resort can effectively be sealed off from the disruptive attentions of journalists and camera crews. Even so, nothing much is expected to come out of the

Perhaps that's not surprising. If aggression is rewarded so handsomely, why not go on fighting?

Why Slater walked

■ Was he pushed, or did he jump? Jim Slater, ex-chairman of the collapsed Slater Walker Securities, has penned his last column for the City pages of the financially-stretched independent newspaper.

It's not clear who terminated whom, but the 65-year-old Slater has no regrets. He is up to his eyes in his latest project - setting up a London equivalent of Value Line the US money managers' crib-sheet. A monthly publication out of the Hemington Scott stable, it will analyse every quoted UK company and give all sorts of rankings. Slater is convinced that it will be a knock-out. But he may have to play

around with the title - Really Essential Financial Statistics It doesn't have quite the ring of a stock market best-seller

Bright lights

Employers' group reports growing confidence | Japanese

# Rise in UK order books boosts recovery hopes

in London

British companies reported the highest monthly level of factory orders for five years in May, providing fresh evidence that the economic recovery is feeding through to the manufacturing

In a further sign of growing business confidence, a Confederation of British Industry survey also found that manufacturers expect a strong increase in output over the coming months.

But this upbeat picture of economic recovery was slightly marred by new money supply statistics that hint at possible inflationary pressures.

The latest figures for notes in circulation, released by the Bank of England yesterday, suggested that next week's statistics would show dramatic growth in Mo, the narrowest measure of the money

The total value of British bank notes in circulation in the week to May 25 was 6.7 per cent higher than a year ago. Using those statistics, and numbers from previ-ous weeks, Mr Nigel Richardson,

Yamaichi International (Europe), estimates that annual M0 growth in May will jump to 7.1 per cent in May, from 6.2 per cent in April The government's monitoring range is 0-4 per cent.

Any such rise is likely to fuel concern that inflationary pressure could potentially undermine recovery, and increase speculation about a rise in interest rates. Earlier this month the Bank of England expressed some concern about rapid M0 growth in its latest inflation report.

Although the report said the acceleration in M0 growth had been prompted by low interest ers to hold cash, it noted that "the longer M0 grows at well above the top of its monitoring range, the greater the concern about the implications for future inflation'

These inflationary concerns were yesterday played down by the CBI itself. Its latest economic forecast, released today, predicts steady, low inflation, economic recovery during this year and next, and says there is little evidence yet of any pick-up in

Meanwhile, the CBI's industrial trends survey, also released today, suggests that price pressures remained fairly weak in manufacturing in spite of the pick-up in output.

Although slightly more companies now expect to be able to increase prices over the next four months than reduce them, this proportion is lower than a year o, and only fractionally higher than in previous months. The survey covers companies counting for about half of the

total UK manufacturing output. Elsewhere, the survey suggests that overseas demand is contributing to the improvement in company order books. Although export order books are still running at levels that companies consider below normal, they are at their best levels since 1990, the survey said. Medium sized companies, reported the best levels of

output and export. But business confidence was high across most sectors, with 36 per cent of companies expecting to see an increase in out-

# Hong Kong developers defy authorities with low bids

By Louise Lucas in Hong Kong

Hong Kong property developers yesterday acted together to arrange low bids at a public land auction, challenging the colony's government, which has pledged to intervene in the property market to bring down soaring prices. One analyst described the government auction, which saw bidders rushing around the hall to reach agreement with those proposing higher bids, as a "blatant display" of a property developers'

The inability of many families to afford their own homes prompted Mr Chris Patten, Hong Kong's governor, to launch a task force in March, which has been instructed to come up with ans of curbing price rises.

Prices of small apartments have risen by 200 per cent in the

past three years, but industry opposition to the government's planned intervention has coinclded with concern that the market has passed its peak.

Last month the government increased the amount of residential land that it will sell this year. Analysts are forecasting that

Patten confident over Hong Kong's future ...... ...Page 4

residential property prices will fall by between 10 and 20 per cent as a result of the government

At vesterday's auction it is that understood a consortium of up to 12 developers bought one site and another 10 jointly purchased a plot. Both consortia included some of the colony's big-

The first site, of 20,780 square metres was sold for \$HK\$2.04bn (\$256.5m) although the market had expected a price of HK\$3bn to HK\$4bn. The second, smaller plot went for HK\$510m, although it had been expected to fetch

The Hong Kong stock market acted badly to the low prices. The Hang Seng index, which had risen strongly in afternoon trad-ing, finished 39.66 down at

However, the land prices were regarded more as a warning to the government than a sign that the property market had turned. Mr Michael Green, director of S.G. Warburg in Hong Kong, said developers appeared to have formed consortia to send a clear to interfere with the free market

# household spending falls 4.3%

By William Dawkins in Tokyo

Household spending in Japan slipped by 4.3 per cent in March, the worst year-on-year decline since 1981, the government's ement and co-ordination

gency announced yesterday. This is the second month of spending decline, a worrying eversal of a four-month run of increases in household spending to the end of January and a sign of the continuing economic challenges facing the government of Mr Tsutomu Hata.

The spending figures cast doubt on Japan's chances of an imminent, consumer-led recovery and increase pressure on the Bank of Japan to reduce its official discount rate (ODR) to give the flagging economy a psychological lift, economic analysts

The official rate, at which the central bank lends to commercial banks, has stood at a record low of 1.75 per cent since last September. Yesterday, it stood a mere 0.3 percentage points below the overnight money market rate, at which commercial banks lend to

That leaves the Bank of Japan little room to intervene to cut short-term money market rates, which are already at a record low, unless there is another reduction in the ODR.

Mr Yasushi Mieno, the Bank of Japan governor, warned this week that corporate balance sheet adjustment and the pace of labour-shedding were amongfactors that might impede growth. However, the bank has so far used the money markets to influence interest rates.

Management and co-ordination gency officials argued that part of the March spending decline was caused by delays in car purchases, ahead of a fall in car sales tax in April.

Its survey also shows a 0.4 per cent decline in wage earners' real incomes in the year to the end of March, the first such drop for 13 years. Bonuses (a large part of annual wages) and wives' income from part-time work both declined, the agency said.

The survey showed that spend ing on food, furniture and clothsage to the government "not | ing fell, while households spent more on housing, utility charges

### THE LEX COLUMN

# Eurotunnel bridges the gap

It is a miracle of financial as well as civil engineering that Eurotunnel has come this far. With its third round of funding secured, the project at least has the chance to be tested against alternative forms of transport in the onen market. But it is too early to hail Eurotunnel as a triumph for privatesector funding; that would require all capital providers to receive adequate compensation for their risk. While the banks are earning a healthy interest margin on their loans, it is not yet clear that shareholders will see a

With construction now completed, further disappointment on costs looks remote. But the revenue Eurotumel will generate remains a matter for educated guesswork. The latest financing package includes \$500m leeway in case revenues fall short of the company's projections. Still, a revenue shortfall of more than 17 per cent between now and 1998 could leave the company short of cash. That would push dividends back beyond 2004. Without hard evidence of the business Eurotunnel can attract, the possibility cannot be

The next 18 months, including the first full summer season, will be critical. With its enormous fixed costs, Eurotunnel would have little option but to react if price competition from the ferries left it running well below capacity. Tourist traffic outside the summer season is especially price-sen-sitive. While ferry operators have little incentive to start a price war, it remains an open question whether Eurotunnel's current pricing strategy will fill its expensive pipe.

If revenue exceeds expectations in the early years, though, Eurotumnel could equally lock into a virtuous cir-cle. High borrowing costs are the penalty for relying on private-sector funding. An average interest cost of over 9 per cent on \$7bn bank debt - and a whopping initial 2.5 per cent margin over interbank rates on its latest loan leaves precious little for shareholders. While Eurotunnel's forecasts already assume a modest reduction in borrowing costs, a credible cash flow would greatly strengthen its negotia-

ting position with the banks. Dividends might then come earlier than expected. With a year or two of solid cash flow for comfort, institu-tional investors might also reduce the rate at which dividends are discounted in their theoretical valuations of the shares. The combination could have a dramatic impact on the share price. A victory for Eurotunnel in its tariff dis-

pute with the railways would be icing on the cake. But having been so sorely disappointed on costs, sceptics are not inclined to take revenue projections on trust. Institutional investors cajoled into underwriting the rights issue will see no pressing need for

### Cable & Wireless

closer involvement.

Cable & Wireless shareholders will hope that Lord Young, group chair-man, has greater success in the great China telecommunications lottery than he had in his UK lottery bid. The potential jackpot could be huge: a central role developing China's exploding telecommunications market. Lord Young was full of optimism at C&W's preliminary results yesterday. China planned to expand the number of tele-phone lines from 40m now to 114m by the end of the century, he said. It was no longer a question of if but rather of when the market would be opened to foreigners. C&W had been told it would be China's preferred partner when that happened.

Still, the jackpot is not in the bag. Though C&W hopes for some opening of the China market this year, the timing of liberalisation is uncertain. Though Lord Young continues to hobnob with top Chinese politicians, the risk of that good relationship being damaged by the ongoing dispute between UK and China remains. And even if C&W gets its foot through the door first, others such as AT&T will be

in hot pursuit.
Outside China, the group's prospects are rather dim. Tougher competition and vigorous price-cutting will prevent profits at Mercury rising much in gearing of 12 per cent, stepped-up nvestment in new projects is likely in the next year or two. But C&W still has to prove that it can earn good returns outside Hong Kong. 

### Storehouse

High profile management changes at Storehouse have done no service to the company's share price. This year it has merely level-pegged the sector, despite the group's evident recovery prospects. The new management needs a period of stability to deliver the growth of which BHS in particular ought to be capable. Yesterday's annual results provide a reasonable starting point even if a lower rental charge flattered BHS's profits by about 28m. Group profit before exceptional items was up by 48 per cent Mothercare is recovering nicely, though there is still plenty of room for

higher margins. While rivals such as Burton are grappling with the consequences of extravagant expansion in the 1980's, Storehouse has the room and the resources to expand the BHS chain. It is both under-represented in British shopping centres compared with Marks & Spencer and generates about half the revenue per square foot. Progress admittedly may be slow. Only three new store openings are planned this year but higher volume should add to the benefit of much needed group-wide purchasing efficiencies. The tricky part lies in developing an

image of BHS as a store shoppers visit for more than just casual purchases. That will require marketing flair as well as disciplined management. If Storehouse can achieve that, it would

### TeleWest

The decision to pull the Comcast and General Cable flotations is being blamed on "market conditions". The same excuse will probably be given if TeleWest is pulled this morning. But it will take more than an improvement in the market to resuscitate plans to float the cable industry.

investors who have been burnt on Eurotunnel will need reassuring that discounted cash flow calculations are more solid this time round. They will also want to know why the valuations being sought in cable share issues are much higher than the prices trade buyers have recently paid for fran-

Air-sea rescues, tracking drug smugglers' speedboats, identifying tankers illegally discharging oil - just some of the daily tasks for the US Coast Guard's HU-25 surveillance aircraft.

To keep them flying at all hours requires the fastest repair and overhaul facilities available. That's why Dowty Aerospace Aviation Services at Sterling Virginia has just won the contract to service the main landing gear on all US Coast Guard aircraft. More than one hundred airlines already rely on this facility for landing gear, hydraulics and propeller repair and overhaul. Now Dowty's groundwork skills, honed over thirty years, will keep the Coast Guards in the air. Dowty is one of Ti Group's three specialised engineering businesses, the others being John Crame and Bundy. Each one is a technological and market leader in its field. Together, their specialist skills enable II Group to get the critical answers right for its customers. Worldwide.

# BCI shares fall on capital raising

By Andrew Hill in Milen

Shares in Banca Commerciale Italiana, the recently privatised Italian bank, fell by 4.4 per cent yesterday on news that the bank wants to raise up to L2,362hn (\$1.4bn) through an issue of new shares and warrants.

Although the proposal will not be approved by the bank's directors until June 1, the company decided to make a statement late on Wednesday because of

about an increase in capital. According to the statement, the board will also consider plans to seek shareholder authorisation for further capital increases of up to L2,000bn over the next five years, through the issue of bonds.

BCI yesterday declined to comment on the reasons for the planned capital increases, but some of the funds could be used to strengthen cross-shareholdings with European banks.

bank announced that it was in negotiations to buy a 1 per cent stake in Commerzbank of Germany, which already has a stake in BCI and a seat on the board. BCI is also part of the consorthum which yesterday proposed buying a large stake in Creditanstait of Austria. Creditanstalt is represented on the board of BCI and has been a shareholder since the Italian bank's foundation last

century. BCI said on Monday it

Yesterday, BCI shares fell from L5,841 to L5,105. If the plan is approved by the board, and by a BCI will issue 525m new shares on the basis of one new share for each pair already held, at a price of L3,000 a share. A further 262.5m shares will be issued for the exercise of warrants, convert-

ible into shares at the same price.

BCI was controlled by IRL the

which raised L2,900bn. Since then, however, Mr Romano Prodi, IRI chairman, has publicly expressed his disappointment that a few large institutions gained control of the boards of both BCI and Credito Italiano, the other newly privatised bank. Mr Prodi refused to comment yes terday on reports that he will resign as head of IRI next week. Creditanstalt, Page 1

### ■ £42m in professional fees ■ Discount reflects unenthusiastic response

# Eurotunnel launches £858m cash call

Eurotunnel yesterday sealed its long-term future by signing up an 2858.3m rights issue and completing 2693m of bank financing, just weeks before the company's money was due to run out. After £42m of fees to advisers

and underwriters – with Morgan Grenfell, Banque Indosnez and S.G. Warburg Securities as the main beneficiaries - the company will receive £816m. The three-for-five issue at 265p

response from the City. The price fell a further 7p yesterday.

It was the most widely expected rights issue since Eurotunnel's £566m call in 1990, when the prospectus said that funds raised would be "sufficient to complete the project and provide the necessary working capital".

The latest issue, the largest in the transport sector and one of the largest in UK history, had to be preceded by the signing up of £700m of new senior debt from a

agreed £693m in financing on Wednesday. An additional £50m has been arranged with a sepa-rate syndicate. Sir Alastair Morton, chairman, said: "We are now open for business and funded through to financial viability." The deal was accompanied by

the news that Mr André Bénard is stepping down as co-chairman to be replaced by Mr Patrick Ponsolle, a Eurotunnel director and former managing director of Cie de Suez, the French group. The primary cause of the latest

There was a further £290m increase in construction costs, and the remaining capital is required to pay interest on the new debt until Eurotunnel breaks even - scheduled for 1998. Under its latest financing which assumes agreement for the £50m additional loan and the exercise of 1993 warrants - Euro-

tunnel has a £470m cushion against any shortfall in revenues. It has also suggested that arbitration over the British and French railway authorities' failure to install agreed infrastruc-

lions". Once it can demonstrate steady cash flows, it may be able to refinance its £8bn of debt on more favourable terms. However, concerns remain over

the quality of Eurotunnel's projections, which are based on unknown quantities, but provide a limited margin for error. Sir Alastair said: "It is now possible to perceive a period 18 months from now, where the operations reach cruising speed. This is when the value will begin to emerge in the company." Details, Page 24; Lex, Page 16

The decision by TeleWest, which was planning a listing on the London Stock Exchange and a registration of American depository shares on Nasdaq, will have considerable influence on other cable companies planning to come to market. As recently as Wednesday Mr Alan Michels, TeleWest chief

executive, suggested the float would go ahead. On Wednesday, Comcast UK Partners which was planning to

raise funds through a secondary share issue in the US, postponed the sale because of poor conditions in the market. Comeast UK, part of Comeast the Philadelphia-based cable

communications company, had planned to sell 11.75m shares for up to \$18 each. When investors showed little interest at a floor level of \$14 a share the offering was postponed. General Cable holds cable franchises in the UK covering some

1.6m homes in areas including Windsor in Berkshire, Hillingdon and Hounslow in west London, and Birmingham, one of the most successful franchises in the that it remained committed "to

providing an opportunity for UK and international investors to participate in the development of the UK cable industry". It would list in the UK and internationally when market conditions were favourable.

# was pitched 25 per cent below 220-bank syndicate. After breach refinancing was the delay in Wednesday's closing price of ing two deadlines, the core banks opening the tunnel, costing an Divergent traffic forecasts highlight uncertainties

Traffic forecasting is an uncertain business: yesterday's announcement from Eurotumel included not one but three forecasts of passenger and freight

The projections come from Eurotunnel, its consultants and the railways, BR and SNCF. Not surprisingly Eurotunnel's numbers are the most optimistic. Eurotunnel is now carrying daily about 100 trucks each way through the tunnel on its freight shuttles. But with just one week

of freight operations behind it,

Eurotunnel is still largely depen-

dent on its traffic forecasts. The underlying prospects are good. The cross-Channel market has been growing strongly since the mid-1980s, passenger traffic by 4 per cent a year and roll-on roll-off freight traffic by more than 7 per cent. Both Eurotunnel and its consultants, TRC, expect this growth to continue.

It is in the detail that the forecasts differ. Eurotunnel believes

to its projected 40 per cent share funding problems would arise. of the roll-on roll-off freight market while TRC expects it to take three years. Eurotunnel's esti-mates of freight and passenger revenues, £120m this year rising to £737m in 1996, are between 5 and 7 per cent higher than TRC's. The railways are in rough agreement with Eurotunnel on its passenger forecasts but Railfreight Distribution, BR's freight arm,

makes a lower freight forecast. Eurotumel claims to be closer to the market than TRC as it actually talks to the freight companies. However, it should be remembered that Eurotunnel and railways are in dispute over the railways' failure to provide upgraded high-speed lines and new rolling stock on time.

matter? Christopher Garnett, Eurotunnel's commercial director, believes that the disparity between the projections will make a difference of "millions rather tens of millions of pounds". Graham Corbett, finance director, said that there was a 17 per cent margin built

into revenue projections before It is also true that independent forecasts of traffic growth have generally been too low. Analysts yesterday were taking a cautious view. One said that even if Eurotunnel met its most optimistic projections, it would still have trouble paying off its debts.

The great unknown is the extent to which the tunnel will create new traffic as opposed to stealing passengers from the fer-ries and from other longer Channel and North Sea routes. A second crucial element in

Eurotunnel's forecasts is the price of tickets. The company believes it will not be possible for ferry companies to maintain their present discount offers. But the omens are not good.

cut its prices by 20 per cent, just five months after promising it would hold them steady for the year. If the ferries are launching into such cut-throat competition before the tunnel is properly open, analysts ask, what will happen when it is providing a

Alastair Morton: 'We are open for business, and funded to viability'

# **Deutsche Bank likely to** cut its Daimler stake

By David Marsh, European Editor

Deutsche Bank. Germany's leading bank, is likely to reduce its stake in Daimler-Benz to around 15 or 20 per cent from 25 per cent in the next 10 years. Mr Edzard Reuter, chairman of the German motor and engine ing company, yesterday said:
"My prediction for 10 years from today is that [the stake] will be 15 to 20 per cent - in that direc-

Deutsche's stake was cut from 28 per cent to 25 per cent after a share placement earlier this

Speaking at a lunch for US correspondents, Mr Reuter said: They [Doutsche Bank] are really trying to withdraw from too heavy industrial engage-ments, especially in the field of supervisory boards. I think this

a very good and very positive development."
About Daimler's 10 per cent stake in Metallgesellschaft, the

troubled German metals and mining group, Mr Rantar gave the clearest indication to date that it might eventually be sold. The stake, taken in 1991 when Deimler saw possibilities of links between the two groups in environmental technology, was no longer regarded as a "strategic investment", Mr Reuter said. However, Daimler participated fully in a rights issue for Metall-gesellschaft earlier this year as a "couradely" gesture, he said.
Mr. Reuter, who has been tipped to take over as the next supervisory board chairman of

Daimler when he steps down from the management board elaborated on his strategy of widening the group's equity base. This was part of his drive

international culture", he said. The proportion of Daimler shares held in the US could rise to 15 per cent over the longer term, from between 3 and 5 per cent at present, Mr Reuter said. Daimler last October became the first German company to have its shares listed on the New York Stock Exchange. Its onefor 10 rights issue later this sum-mer would have a strong inter-

national element to the shareplacing, Mr Reuter said. He gave a blunt assessment of the reasons for a record DMLShn (\$1.1bn) loss last year. Daimler's business performance, which had been "dramatically rotten", was now reaching "turnround", he

"No-one denies mistakes were made by management. We made evaluations which didn't prove

# C&W sets sights on China

By Andrew Adonis

Cable & Wireless, the UK telecommunications group, claims to be on the verge of a breakthrough in China's tele-

At yesterday's results meeting Lord Young, C&W chairman, said the company had been designated "preferred partner" by China's ministry of posts and telecommunications for joint ventures, the first of which could be agreed this year, C&W is using its 57 per cent stake in Hong Kong Telecom, its largest operation, as a launchpad.

The group announced a 19 per cent increase in pre-tax profits to \$1.09bn (\$1.63bn) for the year to items, pre-tax profits rose by 32 per cent, but the weakness of sterling accounted for about £95m of the advance. Lord Young said China was

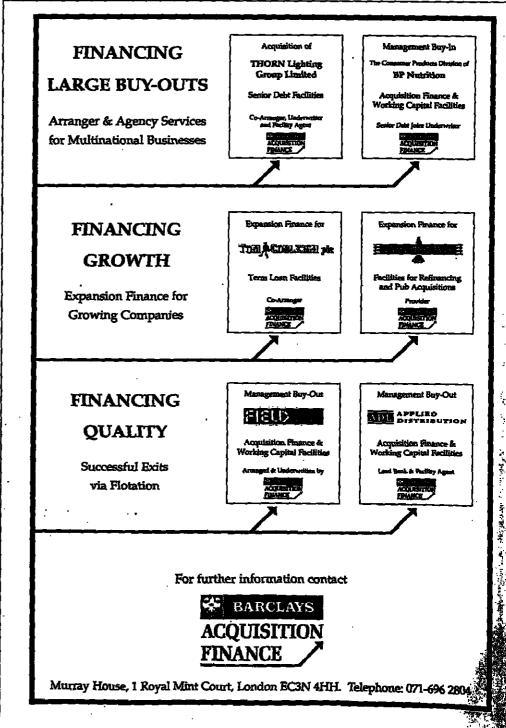

C&W's priority, with the com-pany ready to increase its gear-ing sharply from a year-end 12 per cent - on net debt of nearly 2400m - if suitable opportunities

China's target for the year 2000 is to have increased its number of phone lines from 40m to 114m. The most likely openings are expected to be for city-wide or regional projects.

At \$4.7bn, C&W's annual turnover rose 23 per cent. Barnings per share were 23.6p, against 23.7p (19.4p before exceptionals). March 31. Removing exceptional A final dividend of 5.65p lifts the

total 11 per cent to 8.25p (7.42p). C&W experienced strong growth in all its main divisions. growing in all his main divisions, with turnover 26 per cent up at Hongking Telecom, to £2.05hn, 21 per cent up, to £1.47hn, at Mercury Communications in the UK — in which C&W has an 80 per cent stake — and 29 per cent up in the C&W has a few to the complete to the comp the Caribbean region, to £477m. In the UK, Mercury's traffic

grew by 37 per cent and it claims a UK market share of nearly 14 per cent, with a 25 per cent share of the large business market. Mercary One-2-One, the UK cellular mobile joint venture with US West, now has nearly 100,000 customers - about 15 per cent of the market within the greater

Recovery at Paribas, one of France's leading banking groups, is poised to accelerate its recovery this year as the economic climate improves, according to Mr André Levy-Lang, chairman.

"The first months of 1994 have confirmed that this year will mark a new step in the improvement of the group's results," he told the annual general meeting in Paris yes-

Turnover was virtually flat at ing and construction to London's Ritz Hotel, omitted the | Fl 1.60bn compared with interim dividend. Fi L61bn. Details, Page 24

In line with the company's

performance in 1993, Ned-lloyd's ocean shipping saw the biggest improvement, posting an operating profit of Fl 24m against a loss of Fl 57m in the same quarter of last year. Although downward pressure on shipping rates resumed in early 1994 after a period of stable rates in 1993, Nedlloyd said

per cent of group turnover.

it was helped by a rise in the volume of cargo transported. Nediloyd's European road haulage business saw a rise in operating profit to Fl 14m from Fl9m, but the performance was still below expectations. Nedlloyd repeated earlier

forecasts that it would post a profit for the full year.

# first profit for quarter since 1991

By Christopher Brown-Humes in Stockholm

MoDo, the Swedish pulp and paper group, yesterday announced its first quarterly profit since 1991 and upgraded its forecast for the full-year. The group made a profit of SKr202m (\$26m), after net financial items, against a year-

earlier loss of SKr181m. It said its full-year profit would be "well above" SKr1bn, compared to last year's SKr449m loss. The group's B shares rose SKr7 to

Mr Bernt Löf, chief executive, said that although prices were rising, they had a limited impact. The upturn was mainly due to higher volumes, better capacity utilisation and cost-cutting. The group also benefited from lower interest rates and reduced net debt. Sales rose to SKr4.57bn from

French operations where

## Thomson-CSF may report loss of up to FFr2.2bn

By David Buchan In Paris

Thomson-CSF, the French state electronics group, said it could report a loss of up to FFr2.2bn (\$380m) for 1993 because of its 21.6 per cent stake in Crédit Lyonnais. In March, the French bank

announced a loss of FFr6.9bn for 1993 and a FFr44.9bn government-backed rescue package including the transfer of Ffr40bn of non-performing property loans to a new shell

Without Crédit Lyonnais, Norway's political agenda. Thomson-CSF would have made a FFribn profit last year. I it is widely expected that the and gas of 11 years for oil rising production costs.

# MoDo posts Greek telecoms returns to market

The new government has scaled down the flotation, writes Kerin Hope

tion of OTE, the Greek telecoms monopoly, is back on track after an eightmonth gap caused by a change of government. However, the socialist administration's plan to sell 25 per cent of the company through the Athens stock exchange is less ambitious than the one launched by its conservative predecessor in

The conservatives wanted to sell 49 per cent of OTE, disposing of a 35 per cent strategic stake to an international telecoms operator, together with management rights, before floating another 14 per cent.

The socialists insist the comany should remain under state management. Neverthe-less, government advisers, aware that the question of efficient management will loom large in investors' minds, propose appointing a telecoms operator from abroad as a technical consultant.

The selection of a consultant could be timed to coincide with the flotation, provisionally set for October, they suggest.

Analysts say that given investors' current enthusiasm for international telecoms issues, neither the delay nor the decision to restructure the disposal are likely to reduce the appeal of OTE. OTE, valued by analysts at utilities in Greece. Company officials say that operating profits in 1993 amounted to some Dri20bn on turnover of Dr300bn, a 25 per cent increase on the previous year.

Although Greece is a mature market in terms of its fixed network - with 40 lines for every 100 residents - there is considerable room for growth. Digital lines amount to only 15 per cent, while data transmission systems, paging and tele-conferencing are all in their infancy.

OTE is also benefiting from substantial European Union funding for a "crash programme" to improve telecommunications in Athens. Last month, Siemens Hellas and Intracom, a local telecoms equipment supplier, were awarded a Dr40bn contract to provide Im digital lines for the capital. New transit exchanges will be linked by fibre optic cable, and 12 outmoded exchanges are being replaced with remote concentrators.

A crucial question will be tariff policies, still controlled by the government. Some effort was made last year to iron out distortions in pricing - which favoured domestic customers making local calls while long-distance and inter-

national rates were charged at

he much-delayed flota- around Dri,000bn (\$tbn), is one high rates but further tion of OTE, the Greek of only a few profitable public restructuring will be needed. Revenue per line for OTE is only half the European average, so there is plenty of potential. But if the company stays under the state umbrella, will the government allow realistic price hikes?" asked a local ana-

The government this week re-appointed Credit Suisse First Boston and J. Henry Schroder Wage, originally the conservatives' choice, as co-or-dinators and lead managers for the issue flotation. CSFB was already advising the government on the strategic sale.

7 chroders will structure the issue, while CSFB will place an international tranche, expected to amount to 10 per cent of OTE's equity, with investors in Europe and the US. National Bank of Greece, the

biggest state-controlled bank, will be lead manager for the domestic tranche, replacing Credit Bank, the private Greek bank selected last year.

The experience acquired last year should help the international investment banks to meet the new timetable for the flotation. It will still be tight: revised legislation on the regulatory framework must be passed, a full audit must be

needed on OTE's heavy pension fund liebilities. There are still gaps in OTE's balance sheet, as its first audit to international standards, launched last year by Arthur Andersen, was halted when the change of government took place. However, it is clear that current pension fund liabilities

amount to over Dr300bn, ana OTE contributes Dri4bn annually to the fund, which also receives a subsidy from the budget. However, if the company's pension obligations are not reduced, the fund will become a serious drain on

future earnings. With the socialists now com mitted to increasing Greece's base of small shareholders through privatisation, the domestic tranche, expected to amount to some 10 per cent of the offering, may include some incentives. The remaining 5 per cent is to be stripped out and sold at a discount to OTE employees and pensioners.

Government advisers dis-count fears that the issue, five times bigger than the largest offering to date, could overwhelm the Athens stock exchange. They see no short-age of liquidity, as more than than Dr50bn in listings and rights issues was raised with-out difficulty during the first quarter of this year.

# Statoil worth up to NKr80bn

By Karen Fossii in Oslo

Statoil, the Norwegian state oil company, has been valued at between NKr72bn and NKr80bn (\$10.1bn-\$11.2bn) by an independent assessment.

The appraisal, commissioned by the government from Goldman Sachs International, the US investment bank, and Fiba Nordic Securities, a domestic firm, was designed to assess the group's value and relative performance within the global petroleum industry.

The valuation could be seen as part of the process in the lead-up to a part-privatisation of the state-owned group, although the issue is not on Should Statoil be privatised, way's largest publicly-quoted company, in which the state holds a 51 per cent interest. Fiba valued Statoil at NKr80bn, or 17 times expected 1995 earnings and three times book value. Goldman Sachs,

move on that of the ownership

structure of Norsk Hydro, Nor-

which valued the oil group at between NKr72bn and NKr78bn, ranks it, outside government control, as the seventh largest independent oil company in the world. This is based on its proven

reserves of 3.8bn barrels of oil equivalent with a reserve life of 19 years, according to current production levels. The figshow production lives for oil

The US bank put Statoil's market capitalisation at between \$5bn and \$15bn, ranking it as a mid-tier oil company among the top 15 to 20 in the world, close to the size of Phillips Petroleum of the US.

In terms of independent oil groups, Statoil's size is closest to that of Enterprise Oil in the UK, according to Goldman Sachs. Enterprise, however, has a rising production profile while Statoil's is declining. Goldman Sachs forecast Stat-

oil's 1994 operating profit at NKr12.43bn, unchanged from 1993, rising to NKr15.02bn in 1995 and NKr16.2bn in 1996. However, it says Statoil ing oil production, and faces

By Karen Foesil

Norsk Hydro, the Norwegian energy, fertilizers and metals group, yesterday disclosed details of a rights issue to raise nearly NKr5bn (\$702m).

Hydro will issue 23.7m shares at NKr200 each. Its shares closed yesterday down NKr0.50 to NKr246, Existing shareholders will have the right to subscribe on a one-fornine basis, for up to 3.62 per cent of the new shares, during a subscription period between June 3 to June 17.

The Norwegian state, which ure can be broken down to lacks projects to replace declin- | holds a 51 per cent stake in Hydro, intends to subscribe in full to its entitlement.

indue detail

Computer Associates, one of the largest software companies, reported record fourthquarter results as sales of its programs for mid-range clientserver computer systems

increased sharply.
Net income for the quarter ended March 31 rose 60 per cent to \$158.8m, or 93 cents per share, from \$99.1m or 57 cents per share. Revenues were \$633.7m, an increase of 17 per cent over \$540.1m in the same period last year.

Earnings were well above Wall Street expectations and the group's share price gained \$3% to trade at \$40% at midday in New York. Costs were entially flat despite a strong

\$2.34 per share, up from \$245.5m or \$1.44 per share last time. Revenues were \$2.15bn, up 17 per cent from \$1.84hm in the prior 12 months.

Revenues from software for mid-range computers more than doubled in the fourth quarter, said Mr Charles Wang, chairman and chief executive. In order to continue building on our mid-range client server foundation, the company entered into a definitive agree-ment to acquire The ASK Group, earlier this month," he

# sells unit to Heinz for \$70m

By Naazneen Karmali In Bombay

Glaxo India, a subsidiary of Glaxo Holdings of the UK, has sold its family products division to H.J. Heinz of the US

for \$70m. The division contributes 30 per cent to the offshoot's net profits and generates annual revenues of Rs1.5bn (\$47.8m) from products including baby foods, health beverages and toiletry products.

The deal involves all brands. a factory at Uttar Pradesh and an undertaking by Heinz to employ the division's 950 The sale, which will be put

to shareholders next month, is

subject to government approval.

The sale is in line with Glazo's strategy to concentrate on its mainline pharma-

ceutical business which contributes around 65 per cent to total revenues of Reson. Last year, Glaxo Holdings invested Resion to increase its stake in the Indian company from 40 per cent to a

majority 51 per cent. Since then steps have been taken to align the Indian subsidiary's businesses more closely with the parent

In an attempt to overcome constraints imposed by drug price controls introduced in 1979, Glaxo India had diversified into products such as starch derivatives, soya bean oil and liquid glucose by setting up joint ventures. Last year the board decided to move out of these loss-making

A Glaxo spokesman said that while the division has contributed to the bottom line, its growth was in question with the entry of multinational food companies to

### Texaco plans to sell oilfield in Columbia

Texaco, the US oil group, confirmed that it plans to sell an oilfield in Colombia, as well as a pipeline that connects the field to a refinery owned by the government, Reuter reports from New York, A Texaco spokesman said

the company would keep its ombia. "We are not leaving the country," he said. Industry sources said the oil-

field produces about 15,000 barrels per day. The spokesman said the

planned sale was part of a programme of evaluating He added that the move was not the start of a wave of divestiture.

Texaco said that it would retain a lubrication/blending operation in Colombia.

# Glaxo India Writedowns push Cadillac Fairview to C\$2.7bn loss

The main operating subsidiary of Cadillac Fairview, the Toronto-based property developer which is in the midst of a debt-restructuring, suffered a C\$2.71bm (\$1.96bm) loss in its latest fiscal year.

The loss, the biggest ever reported by a private-sector company in Canada, was largely due to hefty writedowns of real-estate assets to reflect the lower of their cost or market value.

As a result of the write-

downs and other non-recurring provisions, the book value of the subsidiary's assets tumbled to C\$2.8bn last October 31, from C\$5.3bn a year earlier. Cadillac Fairview (CF) is a private company owned by about 40 institutional investors

in the US and Canada. Its 73

properties include Toronto's landmark Eaton Centre. The parent company does not publish financial results, but its main subsidiary, Cadillac Fairview Corporation Ltd. has issued publicly-traded debt

CFCL's operating loss was C\$195.6m in the 12 months to October 31, up from a C\$162.7m CF's capital-restructuring

C\$3.3bn.

The company is seeking to reduce its debt, raise new equity and sell some assets. It has segregated its various properties, servicing the debt only of those with adequate

cash flows. According to local reports, prospective providers of equity include the Reichmann family, former owners of Olympia 8 York Developments; Mr Li Kashing, the Hong Kong tycoon; and US financier Mr Leon Black.

A CF spokesman said yester-day that the ownership of the company was in a state of flux, with several existing share holders in the process of selling their holdings. He declined to give details. Mr Doug Sawchuk, analyst

at Dominion Bond Rating Service in Toronto, said CF's debtrestructuring was likely to be simpler and less acrimonious than the plan negotiated two years ago by O&Y. CF has fewer subsidiaries, fewer tiers of creditors and fewer cross-

default provisions. However, Mr Sawchuk said that bank lenders, led by for and on behalf of Bell Resources Financial Services N.V. Toronto-Dominion Bank, "are a wild card". The banks hold the bulk of CF's unsecured debt. May 27, 1994

# Warm reception for Spanish utility offer

By Antonia Sharpe

securities.

Applications for the domestic retail tranche of the global share offer in Endesa, the big Spanish electrical utility, reached a level of 21/2 times the number of shares available, according to initial estimates from advisers to the issue.

A total of 22.6m shares in Endesa, representing 8.7 per cent of its total equity, is being sold by Endesa's chief shareholder, Grupo Teneo, which is part of INI, the public-sector corporation. Prior to the offering, about 24 per cent of Endesa's shares were publicly held. The size of the retail tranche had already been increased by

23 per cent earlier this week to 6.1m shares in the light of the strong interest from retail investors. Of the 500,000 retail investors who had pre-regis-

offer, in line with forecasts.
The strength of Spanish retail demand fulfilled Endesa's desire to widen its shareholder base, which at present is dominated by New-York based institutions. It also fanned speculation that Teneo might exercise the so-called "claw-back option" to bring additional shares from the international and US tranches to the Spanish retail tranche. Currently, 5.4m shares in the form of American depositary shares are earmarked for the US and 7.5m shares for international

investors subscribed to the

investors. Endesa's share price closed yesterday at Pta6,630, up Pta30. The subscription period in Spain ended yesterday and pricing of the issue is expected to take place next week with tradtered to buy the shares, 200,000 ing starting on the next day.

# Bank of Montreal up 9%

Bank of Montreal opened the second-quarter reporting season of Canada's "big six" banks by posting a 9 per cent rise in earnings.

The improvement was attributed largely to higher voltimes and a drop in loan-loss provisions. However, it was

partly offset by slimmer mar-gins, especially in money market operations, and a 6 per cent rise in non-interest expenses. Net income grew to C\$188m (US\$136.2m), or 69 cents a share, in the three months to April 30, from C\$173m, or 63 cents, a vear earlier. Loan-loss provisions fell

C\$157m from C\$168m.

Schroder Korea Fund plc NOTICE is hareby given that the Annual General Meeting of Schooler Korea Fund pic will be held at \$1.00 a.m. on Tuesday, 21 June 1994 at 33 Guiter Lane. London ECZV 8AS, to consider and, if shought \$1, pass the following resolutions, which will be proposed as Ordinary Resolutions:

That the Report of the Directors and the Accounts be adopted.

That no Final Dividend be declared.

That Mr. Herenny A. Hill be re-elected as a Director of the Company.

That Mr. Maithew F. Dobbs be re-elected as a Director of the Company.

That Mr. Maithew F. Dobbs be re-elected as a Director of the Company.

That Googers S. Lybrand be re-appointed as Auditors of the Company.

That the Board be authorised to agree the Auditors' remuneration.

Registered Office: Senator House 85 Queen Victoria Street Landon EC4V 45J

Notes

A member of the Company entitled to attend and vote at the Meeting may appoint a proxy or probles to attend and on a poll to vote in his stead. A proxy need not be a member of the Company. Forms appointing probles must be lodged with the Company's Registrar not less than 48 hours before the time appointed for the Meeting. The completion and astern of a form of proxy will not producte a holder entitled to attend and vote in person at the Meeting from doing so if he or site wishes.

In accordance with the requirements of The Stock Exchange, London, a statement of all transactions of each Director and of his family inserted in the shares of the Company will be available for inspection at the registered office of the Company at Senstor House, 85 Curent Victoria Street, London ECAV 4EJ, during normal business hours from the date of this notice to the conclusion of the Meeting. None of the Directors has a contract of service with the Company.

### CHINA MERCHANTS CHINA DIRECT INVESTMENTS LIMITED

ANNOUNCEMENT OF 1993 RESULTS

The Board of Directors is pleased to announce the audited results for the period from 13th April, 1993 (date of incorporation) to 31st December, 1993 as follows: 1.057.055 Interest income Gains on sale of listed inves 5.6.138 1,595,014 Profit before accasion (150,000) 1.445 044 Profit attributable to sharehold

Earnings per share

Hong Kong profes (ax has been provided on net taxable earnings at 17.5%.

No deferred transion has been provided as there are no significant timing differences arising between profits as computed for taxation purposes and profits as stated in the financial statements.

The calculation of earnings per share is based on earnings for the period of US\$1.++5.044 and 95,240,000 ordinary shares in issue during the period.

No figure for fully diluted earnings per share is shown as the exercise of the subscription rights attached to the warrants in issue during the period would not have a diluting effect on the 1995

The net profit of the Company for the period ended 31st December, 1993 amounted to US\$1.445.044.

As at 31st December, 1993, the net asset value per share of the Company amounted to US\$1.019. This represents an increase of approximately 2% as compared with the net asset value of US\$1,000 at 22nd July, 1993 immediately after the initial listing of the Company's shares.

The economic policy of China continues to be favourable to a sustained growth in the country's GNP. attracting significant inflows of capital and foreign investors including the Company. The economic austerny program commenced last year and the unification of China's dual exchange rates effective 1st January. 1994 have not hampered investments by the Company. Rather the Company has been better-positioned to source and secure investment opportunities. The progress of investments since January 1994 has become increasingly rewarding. The Investment Manager remains confident, subject to no unforescen circumstances, that the Company's assets will be substantially invested by the end of 1994.

The Directors do not recommend the payment of a dividend for the period ended 31st December, 1993.

PURCHASE, SALE OR REDEMPTION OF SECURITIES

During the period ended 31st December, 1993, the Company neither purchased, sold nor redeemed any of as

# INTERNATIONAL COMPANIES AND FINANCE

# Lawsuits make US groups publicity-shy

Patrick Harverson examines the background to a trend in corporate self-defence

companies are becoming increasingly reluctant to keep investors fully informed of their prospects because of the threat of costly legal action.

The threat comes in the shape of class-action securities frand lawsnits filed by shareholders aggrieved that the value of their stock fell when information proved inaccurate, and the increasing number of these suits has caught the eye of the regulators.

A study released last week

by the American Stock Exchange found that more than 75 per cent of the com-panies surveyed said they had been forced to curtail the amount of information they provided to investors because of concern over lawsuits.

Companies Which cut back on information to investors often do so following legal advice. Mr Bob Profusek, head of the corporate department at the law firm of Jones, Day, Reavis & Pogue, says: "Most lawyers now discourage comnanies from making anything like traditional projections."

Fighting class-action lawsuits can also cost companies a iot of money The National Economic

Research Association says the average cost of settling such lawsuits has risen in the past three years from \$5.8m to

Securities Class Action Alert, a New Jersey-based newsletter. recently estimated that companies paid \$1.55bn last year to settle shareholder lawsuits. compared with just \$324m in

Although any company can be the target of a shareholder lawsuit, high-tech and biotechnology companies are particular vulnerable because they need to keep investors constantly updated on technological development, patents and product innovations.

in addition, young, smaller companies are especially at risk, because their shares are more likely to fall sharply on disappointing financial news. and because they are more likely to settle rather than fight lawsuits. In California, where there is a concentration of high-tech industry, shareholder lawsuits filed under Section 10b-5 of the Securities and Exchange Act relating to false or misleading information - are particularly According to the Coalition to Eliminate Abusive Securities

between 1990 and 1993 to settle 10b-5 lawsuits. Public companies are not the only ones affected by such suits. Take the case of Mr Bob Gilbertson, chief executive of CMX Systems, a small but fastgrowing Connecticut high-tech company eager to raise funds

Suits (CEASS), a business pressure group. Californian compa-

nies paid out a total of \$502m

on the public markets.

Mr Gilbertson says he was recently advised by investment banking firms that if he took the firm public, he would have to allocate at least \$2m of the flotation proceeds to cover the almost certain possibility of having to settle a shareholder lawsuit within 12 to 18 months.

He says: "The investment bankers effectively told us to write \$2m off to pay the lawyers to go away." Mr Gilbertson decided against taking the company public.

any chief executives on the wrong end of class-action lawsuits do not blame the shareholders so much as the lawyers, who know they can force companies to settle quickly. In the ASE study, a clear

majority of the 17 per cent of the companies which said they The Securities and Exchange bour. Consequently, companies had been sued during the past

Capitol Hill: Seeking ways to give companies more protection

five years on disclosure issues Commission, concerned that settled out of court rather than fight the suit.

Ms Lynn Zempel, a spokes woman for CEASS, says: "Companies say that most of the time their lawyers tell them its cheaper to settle than fight, and [the shareholders'] lawyers know that."

The financial incentive for the lawyers is considerable: the ASE survey found that nationally, the plaintiffs lawyers receive 30 cents for every dollar sought in these lawsuits, compared with just six cents for every dollar the shareholders themselves receive.

But the growing instances of shareholder lawsuits has attracted the attention of regulators and legislators.

companies may be shying away from fuller disclosure because of the lawsuits, is considering bolstering the "safe harbour" provision of US securities law.

The provision protects companies from fraud claims unless the information they release is "without a reasonable basis or was disclosed other than in good faith". In recent years, however,

companies claim the safe harbour provision has not been working effectively. Its weakness is that companies usually have to go through an expensive and time-consuming pretrial process before a judge rules on whether the information is protected by safe harcan rack up huge legal fees even if the lawsuits are ulti-

While the SEC does not want to deter shareholders from seeking legal redress if they nuinely believe they have been decrived, it is keen to ensure the system is quick to weed out meritiess cases.

Ms Linds Quinn, director of the SEC's corporation finance division, says: "We're exploring what can be done so that the type of information intended to be covered by safe harbour is covered, and that the safe harbour works to the

benefit of companies. "Right now, what they will argue is that even if the information is ultimately decided to be within the safe harbour [provision], you have to litigate there. The question is: are there ways to make the rule work so that it could be

decided earlier in the case?" While the SEC reviews the safe harbour provision, legislatora in Washington DC are also seeking ways to give companies more protection. Bills which would give companies greater help in their defences against frivolous shareholder lawsuits have been tabled in the Senate and the House of Representatives.

The bills include measures to allow judges to make quicker decisions on the merits of individual cases, to halt the use of "professional plaintiffs" with only nominal shareholdings and to

cut attorney's fees. Introducing any legislation that protects corporate defendants from lawyers is always going to be an upbill task in the US, however, and securities lawyers have vowed to fight the Dodd bill. They claim shareholders need all the protection they can get from deceptive companies.

# Indian paper backlog almost cleared

By Stefan Wagstyl

Banks handling the stock market paperwork for foreign portfolio investors in India have mostly cleared the backlog which threatened to overwhelm the country's primitive stock settlement and transfer

However, the banks, which provide custodial services to overseas fund managers, are keeping a tight check on the business they handle. Existing clients are being told to limit purchases; new clients are being asked to wait until processing capacity is increased over the next few months.

The paperwork problems stem from woefully outmoded procedures geared mainly toward millions of individuals buying as few as 10 or 100 shares not institutions purchasing lots of 100,000. A single

# INTERNATIONAL COMPANIES AND FINANCE

# Bad debt crisis worsens at Japanese banks

in Tokyo

Bad loans overshadowing Japan's 11 leading commercial hanks are growing faster than they can be written off, on the evidence of the industry's annual results, published yesterday.

The 11, which provide just under one third of lending to Japan's sluggish economy, took drastic action to reduce their non-performing loans last

But the signs are that it was not enough to improve their balance sheets.

They wrote off Y2,480bn (\$24bn) of bad loans in the 12 months to March, two-and-ahalf times more than the previous year. On top of this, the commercial banks made provisions worth Y2,102bn, a 44 per cent rise on last year's provi-sions of Y1,459bn, and sold Y1,325bn of bad debts to the Co-Operative Credit Purchasing Company, a jointly-owned debt buying organisation set up in January last year. As a result of these hefty charges, pre-tax profits fell for the fifth year running, by an average of 41.6 per cent.

This collective attempt to clean up their the balance sheets is a belated response to the central bank's campaign to persuade the industry to break with its tradition of sitting on bad debts indefinitely.

Yet, despite their efforts, the commercial banks' published bad debts rose both in absolute terms - from Y8,435bn last year to Y8,948bn by the end of March - and as a proportion of total lending - from 3.1 per cent to 3.3 per cent over the

same period.

The published had debt total is down 3 per cent from the balance half-way through the year, at the end of September, prompting bank officials to suggest that the worst is over. But as in previous years, the published figures understate the size of the problem, because they only include loans to bankrupt companies or loans where no interest has been received for six months. They exclude restructured loans, where interest has been shaved to almost nil to keep a by non-bank affiliates for

Together, these could nearly double the published figure according to the most pessimistic independent est-

which the parents are responsi-

The disturbing message behind this is that Japan's deep recession is adding a new tier of debt problems, loans to ailing small companies, on top of the dud property-backed

loans inherited from the post-bubble collapse in property paign to persuade the industry

Equally worrying, the commercial banks covered between one third and half of those write-offs by selling and repurchasing securities, so as to record a capital gain. This is bound to increase their depen-

paign to persuade the industry to break with its "convoy" tradition, whereby banks reported similar results in an attempt to buoy public confidence.

Mitsubishi Bank, the strongest, revealed non-performing loans worth just 1.84 per cent of total lending, while Hok-

Bank :	Net profit (Y bn)	Change (%)	Business profit (Y bn)	Change (%)

per cent. The impression the banks aimed to give yesterday is that they have got to grips with their weaknesses and that there is light at the end of the tunnel. In a symbolic act of penitence, board directors of Bank, Hokkaido Takushoku and Sumitomo, are to forego

their institutions' poor earn-

Most predicted flat profits in the coming year, though again there were significant differences between banks, Mitsubishi, which surprised the market with a 15.7 per cent decline in its core business (or operating) profits - far below than the average 5.3 per cent decline - said it did not expect profits to rise this year. Sumitomo, with business profits down 11.5 per cent, forecast stable earn-

ings. Sakura, by contrast, forecast a recovery from its 23.5 per cent profits decline, to the bafflement of several analysts. "I just can't see where it's going to come from," said Mr Brian Waterhouse, banking analyst

at James Capel in Tokyo. Generally, the industry out-look is tough. Demand for loans remains very weak, as shown by a 1.5 per cent in total lending last year. Anecdotal evidence suggests that the market for creditworthy cus-

tomers is aggressive. mates that 17 per cent of the commercial banks' liabilities are linked to the record low official discount rate and pay less than 1 per cent. If the central bank succumbs to pressure to cut the official rate, this will hardly belp banks' profit marbonuses this year because of

# Faint glimmer of hope in electricals | Kubota posts

By Michlyo Nakamoto in Tokyo

Japan's integrated electrical companies, with products ranging from heavy electrical machinery to semiconductors and audio-visual goods, have suffered badly in the depression of recent years. Last year some were forced to report their third or fourth year of

failing profits. But a glimmer of hope has appeared as they reported still weak but, in some areas, improving results for the year to last March.

Mixed fortunes have also been evident along sector as well as company lines.

What saved many and enabled some to report better results, was strong demand in the US for computers - which in turn supported buoyant sales of semiconductors - firm sales of components in southeast Asia, demand from domestic public utilities and the com-

the result of the domestic slump in cars.
On the positive side were

strong overseas markets and sales of a few specific products. In the US, there was a strong rise in sales of semiconductors and liquid crystal displays (LCDs). The growing popularity of advanced software such Windows, which use more memory capacity, meant that demand for semiconductors rose more than PC sales.

The shift to colour notebooks increased demand for LCDs, a sector dominated by Japanese manufacturers. Toshiba, which uses colour for more than half its notebooks, said demand for LCDs was so strong it could not be fully met. NEC's US tronic devices, saw sales surge

more than 70 per cent. The US market also pleased Toshiba with strong demand for its notebook and sub-notebook computers.

Demand for electronic devices from south-east Asia was another positive factor. Toshiba reported a 9 per cent increase in exports, despite the yen's appreciation, due largely to strong south-east Asian

# European sector returns to calmer waters borrowing

Graham Bowley in London and Frank McGurty in New York

Europe's bond markets returned to calmer waters after the recent days' turbulence. but traders said sentiment was nervous and market participants were too shell-shocked to take significant positions.

"The market is shaky - it's hanging in a very delicate balance," said Mr Peter Kerger, head of futures and options at NatWest Markets in Frankfurt. After Wednesday's sell-off, which sent the German bund future plunging to its year's low, prices clawed back some

of their losses, helped by a firmer tone in the US Treasuries market, but the recovery was without conviction, traders said. One said dealers at some banks had been instructed not to run positions overnight, and to keep intra-

INTERNATIONAL

The June bund future ended the day some 0.20 points higher at 93.75. It derived little comfort from preliminary inflation numbers showing western Germany's cost of living below the 3 per cent level for the first time in three years at 29 per cent. "After recent regional data, this came as no surprise," said a dealer.

■ Bearish sentiment continued to dominate the UK government bond market yesterday, although it recovered in later trading - buoyed by the recovery in US and German mar-

Analysts said traders continned to test new low levels of technical support but one trader said the weakness, particularly at the long end, was caused by the release of "a substantial line, probably in excess of £200m nominal, of very long-dated stock on to the market". Other traders press briefing, Riksbank gover-

reported fairly heavy selling of gilts of all types.

After opening slightly higher, gilts slipped back through the levels reached yesterday to new lows, analysts

### GOVERNMENT **BONDS**

said. They recovered in late trading, when the long gilt future was up % point at 103%.

■ Sweden was Europe's only bright patch. Bonds and the currency rallied smartly after the central bank announced a new system for steering short-term interest rates based on a repo rate, rather than its current key marginal rate.

The Riksbank set the reporate at 6.95 per cent, five basis points below the previous marginal lending rate, and the

nor Mr Urban Backstrom Said the level of the floor, Gr deposit, rate indicated that "the [interest rate] trend is still downwards".

"They now have much more scope to cut rates in small dribbling moves," said Mr Keld Holm, international economist at Lehman Brothers. He expects short rates to fall by around 50 basis points in coming months, which is likely to boost bonds and the krone, he

■ Most US Treasury bonds held steady yesterday morning as the market failed to build on gains built up following the previous afternoon's successful supply auction.

By midday, the benchmark 30-year government bond had inched a ahead to 86%, with the yield dipping to 7.341 per cent. At the short end, the twoyear note edged in higher to 9912, to yield 5.892 per cent

was light and sporadic, with many traders on the sidelines. A flurry of buying followed the announcement that initial claims for unemployment benefit had slipped by 1,000 last week Forecasts centred on a decline of 7,000, which would have signalled a tighter labour

market and more upward pres-

sure on wages. Activity petered out as the market digested an upturn in prices following Wednesday's Treasury auction of \$11bn in new five-year notes. Traders had anticipated difficulty in absorbing the fresh supply, but when those fears proved unfounded, the market rallied. Yesterday, however, profit-

takers came to the fore, even though there was more favourable news from the Commodity Research Bureau. Its index of 21 commodity prices receded further, after a disconcerting surge late last week

# requirement to \$2.8bn By Conner Middela

Inter-American Development Bank, the multilateral bank whose purpose is to further the economic and social development of Latin America and the Caribbean plens to raise some \$2.5hg in the international capital markets this year, significantly less than the \$3.3hn forecast at the beginning of the year.

The borrowing requirement has been revised downwards due to a slower pace of loan dishursements, a lack of advantageous redemption opportunities and the fact that the IADB had less maturing debt than in 1993, when it raised \$3.9bn, said Mr Charles Setimess, finance manager. However, the borrowing requirement will return to

around \$4bn to \$4.5bn in 1995, he stressed. The IADB has raised some \$500m so far this year in four different currencies. It plans to issue "one or two signifi-cant-size" US dollar deals and a DM500m deal later this year, but there are no immediate issuance plans while the bond markets remain volatile. "Our cash position is quite comfortabie," Mr Sethness said. After lending \$5.5bn of

funds in 1993, lending was not likely to exceed \$8bn in 1994. The IADB's shareholders recently agreed to allow it to lend to the private sector without government guarantee, limiting this exposure to 5 per cent of new loans. Although the bank will be exposed to commercial risk for the first time, Mr Sethness was confident it would not threaten the IADB's triple-A rating since this lending would be "at a marginal level and on an

experimental basis".

# IADB drops | Moody's warns on Latin America

By Antonia Sharpe

Moody's Investors Service, the international rating agency, warns in a report on sovereign risk that old vices are surfacing once again in Latin Amer-

Although Moody's has recognised the fiscal improvement and the success of economic reform in Latin America through some rating upgrades, it nevertheless believes that these countries remain highly indebted and structurally placed towards consumption. National debt is rising again noticeably and the fiscal bal-ance has deteriorated in some cases, notably Venezuela, it adds. Although the potential for growth has improved, the

risk of running into debt service problems remains high. 'After a decade of economic crisis, growth rates have been only moderately high and the income distribution of these countries has not improved significantly," Moody's says. It forecasts problems arising from the reversal in the rapid inflow of capital in recent years (in Argentina and Mexico) and says the considerable potential for political

change adds a further degree of uncertainty to the future of the region.

The report, which asses the credit quality outlook for 45 sovereign nations, high-lights negative factors which could burn the low-risk credit ratings of advanced industrial nations. These developments, such as high fiscal deficits, the rapid accumulation of public debt, slow economic growth and declining international competitiveness will force painful economic adjustment but in most cases, the adjustment is not expected not be severe enough to move them into the medium-risk rating

By contrast, Moody's is positive about the outlook for Asian nations, citing credit Asian nations, ciring creat strengths, strong export-driven economic growth, high savings and investment rates and moderate indebtodness in proportion to proposes for continued throng export exprises. How strong export earnings. However, upgrades into the low-risk rating extegories will be constrained by the possibility of political instability and regional conflict and the poten-tial for disruptive social change as social demands rise.

The Monday FT.

This Monday, and every Monday set yourself up for the week ahead with the **Financial Times.** 

Its agenda will not only alert you to the business opportunities and highlights of the week, it will help you make the most of life outside work too, offering a comprehensive guide to everything from the Arts and fashion to health and travel, in an easy to use format.

So whatever you have in mind for the rest of the week, you should start by getting the Monday FT.

Financial Times. Europe's Business Newspaper.

By Neil Buckley

Storehouse, the fast-recovering owner of the BHS and Mothercare retail chains, said yesterday it was increasing its spending to expand selling space, as it reported a fourfold increase in pre-tax profits to £62.4m.

The figures for the 53 weeks to April 2 compared with £15.2m last year, although that was after exceptional losses on disposals of £31.4m. This year's figure was depressed by an exceptional provision of £6.4m against non-repayment of loan notes in connection with the sale of a US business.

Before exceptional items, pre-tax profits increased 48 per cent from £46.6m to £68.8m. However, the shares slipped 3p

Mr Keith Edelman, chief executive, said the economy was "steadily improving" and current sales were broadly in six months.

He added that priorities now were to increase trading space at both BHS and Mothercare. The group had identified 60 target locations for BHS on top of its current 123 stores, and planned three openings this year in Telford, Rochdale and Cambridge.

The group was also convert-ing "fallow" space in existing stores into extra selling space. At Mothercare, the new format designed to appeal to young children would be extended from 20 stores to 75 by the year-end.

Capital spending would rise from £46m to about £60m. Another task was to improve supply chain management, and reduce surplus stock and costs. The group was looking at integrating more closely distribution at Mothercare and BHS. Mr Edelman said other prior-

line with the trend of the past lities were to improve brand awareness and loyalty, and to restore stability after the reshaping of the group in recent years.

Group turnover fell from £1.14bn to £1.05bn, although the figure for 1993 included £172m from discontinued businesses. The group operating margin rose from 5 to 6.4 per cent, in spite of a 1 per cent fall in gross margins reflecting increased markdowns and discounts at BHS, and price repo-sitioning at Mothercare.

Sales at BHS increased from £696m to £749m, and operating profits from £44.1m to £56.2m. At Mothercare, sales grew by 10 per cent to £282m, and operating profit doubled from 25m

Earnings per share increased from 0.1p to 9.7p and a pro-posed final dividend of 3p gives a total of 5.5p (5p). See Lex

# Perpetual trebles to £16.5m

By Bethan Huttor

By Paul Taylor

Pre-tax profits at Perpetual, the unit trust management group, trebled to £16.5m for the half year to March 31, compared with £5.09m.

The company benefited from the good performance of world stock markets in the last quarter of 1993, accompanied by strong unit trust sales.

Funds under management increased to £2.87bn, against £2.03bn, after an inflow of

profit reported by Trafalgar

House yesterday represented

Over-shadowing the results

were warnings from both Mr

the group's first since 1990.

about £700m of net new money. Earnings per share rose from 13.28p to 43.6p, or 39.24p fully diluted, while the interim dividend is 10p (L8p) - the total for the full year to September 1993 was 15p. "With increased funds under

management, fees in the second half will, in the absence of a serious setback, be significantly higher than in the first half', said Mr Martyn Arbib,

Marketing expenditure was

increased during the half year, in order to increase market share, but Mr Arbib said that no further rise in marketing expenditure was planned. Although this might lead to a downturn in sales volume, it should be possible to match

> The property division showed operating profits of £4.2m compared with a profit of £200.000 excluding exceptionals in the year-ago period.

> • COMMENT Although yesterday's results

> re lower than most analyst had expected, what really concerned them was the fact that there seems little prospect of real improvement for some time. The interim dividend was passed, but this was for administrative reasons. Similarly, although the group sustained a cash outflow of £46m during the first half, this included the on-balance sheet refinancing of some £20m of associates' borrowings. Despite these reassurances analysts were marking down their full year pre-tax profit forecasts yesterday to about £50m or £55m. That might generate earnings of about 2.2p. Despite yesterday's decline the shares are still trading on an unjustifiably high multiple close to 40.

**McLeod** Russel ahead 10%

Pre-tax profits at McLeod Russel Holdings advanced 10 per cent, from £1.91m to £2.11m. in the six months to March 31. Mr Nigel Openshaw, chairman, said the benefits of reorganising Wheway. acquired in March last year, were beginning to show.

improvement from the Wheway companies could be expected in the second half in addition to the seasonal bias

towards the period. Turnover for the group, which has interests in surface coatings, environmental engineering and property invest-£55.1m (£21.5m). Operating profit rose 86 per cent to £2.79m (£1.5m) but the pre-tax figure was held back by net interest costs of £708,000 against income of £326,000.

Group earnings per share were lower at 2.81p, against 3.01p, as a result of shares issued for Wheway. However, the interim dividend is maintained at 2.75p.

**EUROTUNNEL FINANCING** 

# Completed rights means final hurdle cleared

More than a fortnight before the Queen, Mr John Major and President Mitterand took the "inaugural" train ride on May 6 through the Channel tunnel, a group of leading fund managers and corporate bankers took the first outsiders' ride. The fact that the City beat the state

through one of the modern world's greater engineering feats, speaks volumes for the predicament in which Eurotunnel had found itself.

With its money due to run out in June, it was faced with the logistics of securing increased loans from a syndicate of 220 banks, and getting support for a rights issue without having any loyal institutional shareholders.

Surprisingly, the £858m rights issue went through with little difficulty, and no evidence of the arm twisting that institutions had expected from issue's broker, SG Warburg.

The underwriting group - with UK such a stock, were uninvested, and institutions covering one half of the unexcited - more than 60 per cent is transaction and French the other took all night to complete the agreement, but once pricing was agreed by the Eurotunnel board at 5pm last night. Success was assured.

The lead-up was not so smooth. The UK stock market had gone against Eurotunnel from the start. And on Wednesday, when the deal was finalised, it hit its low point of the year.

Word of Eurotunnel's difficulty in securing bank finance had spread, creating nervousness among underwriters and potential sub-underwriters, and encouraging a decline in the share

In addition, cynicism remained over the company's financial projections. This meant that the leading institutions, which would be expected to back held by French, mainly retail, investors. In the circumstances, institutions had

a professional incentive in talking down

the price of the rights, to make it more attractive. They succeeded. Eurotunnel had started with a broad spread on pricing, stretching down to a minimum of 250p, because the company was only mandated to issue 340m new

shares, and it needed to raise £850m. By Wednesday, Eurotunnel's expectations had been forced downwards, and the board was faced with a range from 260p to 275p, and variations on the number of shares to be issued. Underwriters were satisfied with the decision

of 265p. The UK tranche was led by Morgan Grenfell and the French by Banque Indosuez, and Swiss Bank took 25 per

cent of the underwriting on both

The format of the syndicates remained unchanged in the final stages and the underwriting agreement was completed at 6am. The sub-underwriting went through relatively casily yesterday morning, as the shares recovered from an initial 20p drop.

Overall, the financial community has cause for celebration. Of the £858m raised from the rights, an astonishing £42m, or 5 per cent, has gone on fees, to cover 2 years of financial advice, more than film for the lawyers, and the usual underwriting fees.

Meanwhile, Eurotunnel can celebrate

having overcome what it claims to be the final financial hurdle in its struggle to profitability.

# Seeking the profitable route Support likely from

Mr Patrick Ponsolle says he is attracted by difficult chal-

His appointment yesterday as co-chairman of Eurotunnel, with the task of helping to steer it to profit, would appear to fit the bill.

In succeeding Mr André Bénard, who is stepping down from the position at the age of 71, Mr Ponsolle does, however, have some cards up his

"He is well-connected, has a lot of financial experience and is very ambitious", says a former colleague from Cie de Suez, where Mr Ponsolle, 49, has spent much of his career. The first two attributes are largely the result of his time at Suez, the powerful industrial and financial group where Mr Ponsolle rose to the position of managing director. But they also reflect a stint in government administration.

After graduating from the prestigious Ecole Nationale d'Administration, the training ground for many of France's top civil servants, he worked in the economics ministry. serving as an aide to Mr Laurent Fabius, the socialist budget minister who later became urime minister.

"He is a quintessential product of the French financial establishment", says one Freuch banker - referring to Mr Ponsolie's track record.

tions, is likely to prove an asset in the financial and commercial negotiations with which he will now be faced. "It will be much harder for French banks and institutions to say no to Ponsolle than to Bénard, who was a relative Alastair Morton, the British

Patrick Ponsolle: we will form a trio, sans problèmes

outsider", says one member of the underwriting syndicate for Eurotunnel's rights issue.

If Mr Ponsolle is widely known, however, he is also widely known for being ambitions - a factor which helps explain his departure from Suez. One of the favourites to replace Mr Renaud de la Génière as chairman of the financial group in 1990, the appointment of Mr Gérard Worms blocked Mr Ponsolle's hoped for the big prize and it is no surprise that he has looked somewhere else", says one former colleague.

In his new job, which will start in July, Mr Ponsolie says he will work alongside Sir

co-chairman, and Mr Georges Christian Chazot, the managing director. "We will form a trio, sans problèmes", he forecast yesterday.

He has few illusions, however, about the task that awaits him. "The first steps have been taken, but there is a lot of hard work to do." If he succeeds, he will be fulfilling the ambitions of his former After the nationalisation of

Jacques George-Picot, then head of Suez, declared his determination to build a tunnel under the channel. Mr Ponsolle inherits a tunnel, he must now make it pay.

John Ridding

# French investors

Mr Christian Cambier, the French head of the association for Eurotunnel shareholders. expresses resignation on the subject of yesterday's rights issue. "We have no choice", he said when asked if individual shareholders would subscribe the proposed capital

Mr Cambier, who represents an estimated 1,500 of Eurotunnel's 600,000 shareholders, expressed dismay at the decline in the company's share price but said that investors in the company were "a special breed". The French, in particular, he claimed, "have a faith in this kind of grand project. They have stuck with it and they believe it it will succeed". The attitude of Mr Cambier

and his compatriots is critical. French investors hold more than 60 per cent of the shares in Eurotunnel, the majority, like in Britain, dispersed among individuals. In responding to the rights, however, their faith will put to the test. Like their British counterparts, the French underwriters had privately expressed concerns about the capital increase. "There was some tough talking but we think the

terms are acceptable and we are quite confident that inves-

French heavyweights have been signed up for the under-writing. Headed by Banque Indosuez, the lead managers include the recently privatised Banque Nationale de Paris, the state-owned Crédit Lyonnais and the French arm of SBC.

The co-lead managers include Crédit Agricole, Banque Pari-bas, and the Caisse des Depots et Consignations, the state financing institution which is one of Eurotunnel's largest investors with about 2 per cent.

Many of their target institu tional investors appear ready to grin and bear the burden of the issue. They will face a lot of pressure to support the issue, including from the French government", said one

He believed that shareholders such as the recently privatised Union des Assurances de Paris would throw their weight behind the capital increase. "There is a lot of political capital at stake in this project. I think the bigger investors, like some of the underwriters, will have been made aware of this."

One insurance company said it would be looking at the pro-spectus very carefully. "It may be cheaper to reduce our stake now than later", he said. What is already clear is that

a bumpy and uncertain ride is in prospect. With so many small shareholders it is hard to predict the outcome. "The fact that the value of the shares has fallen so far from the peak in 1989 will provoke a lot of resentment. There is also a feeling that underwriters have sure on the shares to increase their returns. But if shareholders have stuck with it this long, they may see little point in balling out now," argued one analyst.

# Argent share price set at 255p for value of £140m

By Vanessa Houlder,

**Property Correspondent** 

Argent Group, the property investor and developer, yesterday set its flotation price at 255p per share, valuing the company at £140m.

It is offering 13.7m shares through a placing and intermediaries offer, which represents a discount of 5.2 per cent to its adjusted net asset value. Argent is raising £27.1m net, which will be used to fund investments and developments,

although it will initially be to cut debt. Under the offer, 11.57m shares are being issued and 2.16m shares are being sold by Warburg Pincus. After the

offer, Warburg Pincus will be left with 27.3m shares, representing about 49.8 per cent of

the company. The management team is not selling any shares in the offer.

COMMENT Argent has a lot to live up to.

In a market jaded by the glut of property companies attempting flotations, Argent's launch stands out because of the plaudits heaped on its management team, who have a won a reputation for skilful timing over the past five years. The shares have been keenly priced and, in a weak market, could fall to a discount when dealings start. In the short term, asset growth could be held back by the demanding valuations placed on its properties. However, for long-term investors looking for capital growth, rather than income, Argent could be one to

# Warner **Estate** declines

Warner Estate Holdings, the property investment company, yesterday announced pre-tax profits of £3.66m for the six months to end-March, down from a previous £3.76m. Turnover increased from

£5.41m to £5.89m. The interim dividend is 3.85p (3.65p) while earnings per share were 5.65p Rental income increased from £4.25m to £4.48m. The directors said the increase

reflected the purchase of prop erties. They expected rental income to continue to grow. Turnover also included £890,000 (nil) from property trading and £515,000 (£1.16m) from specialised contracting.

# M&G takes a leaf out of its own book

By David Wighton

M&G, the fund management group that stresses the importance of companies paying high dividends, is increasing its own tuterim dividend by 80 per cent to

13p as profits continue to surge.

The move partly reflects the intention to reduce the disparity with the final payment but the company expects

total dividends to rise by at least 12 per Pre-tax profits in the six months to

March 31 rose by 37 per cent to £31.2m (£22.8m). Funds under management increased by 18 per cent to £14.1bn. Unit trust sales more than doubled to \$574m (\$232m) and not of redemptions jumped from just £4m to £308m. That

Unit trust Pep sales almost trebled to 2304m, boosted by the removal of the initial charge on the Managed Income Fund Pep in January. Mr Paddy Linaker, who retires as

represented 12.8 per cent of the indus-

group managing director in July, said he was pleased with the improvement in marketing following personnel changes. "Last year we were pleased with the investment performance, but a bit disappointed with sales." Life and pension policies also showed strong growth, with sales of single pre-

mium life policies almost trebling to £120m and single premium pension policies up 88 per cent to £49m.

Revenue from institutional clients rose 19 per cent to £2.99m, although

higher costs reduced profits to 2784,004 (£1.1m).

....

Mr Linaker said the investment per formance had held up well until the end of March and that the group was well positioned with a UK equities portfolio relatively light of highly-

rated large companies.
"The relative outperformance of income, recovery and smaller company stocks has at least another year to go,"

Earnings rose to 29.1p (21.5p).

# Dividing in order to multiply

Paul Cheeseright on BSG's latest purchase and its strategic plans

SG International opened B a new chapter in its his-tory yesterday when it split its business into two core divisions, opening the way to the break-up of the group. It also made a recommended £20m offer for Jessups, the rehicle distributor.

The splitting of the group into Britax International, which will hold all BSG's manufacturing operations, and Bristol Street Motors, which hold the group's vehicle distribution and servicing busi-nesses, is the upshot of a stra-tegic review which has been taking place since last autumn. The offer for Jessups is an immediate step to strengthen

Bristol Street Motors, a move which also springs from the review. "One follows the other," says Mr Richard Marton, BSG chief executive. The shares fell 5%p to 69p. The division of BSG opens up the possibility that either of the halves could be demerged,

reverse takeover or sold. But there is not likely to be any "What we are doing does not put a For Sale sign up over any of our core businesses," says

floated, made the subject of a

A change of course has been in the offing since last sum-mer. Then Mr Tom Cannon, who had been managing director and expected to become non-executive chairman, was eased into retirement.

The growth of BSG from a Birmingham car dealer to a significant components manufacturer and vehicle distributor with turnover approaching \$600m is associated with Mr Cannon more than with any

But the growth had been haphazard; it certainly did not follow any tenets of strategic planning laid down in a busi-ness school. Car mirrors and lights, sunroofs and seat belts, pushchairs and aircraft lavatories, quite apart from car dealing and leasing - BSG has

Mr Marton, as Mr Cannon's successor and one-time subordinate, has been seeking to put order into the diversity, to apply 1990s thinking to the practice of earlier decades. Any thought that this might be a leisurely process was dispelled in the last quarter of 1993, when BSG saw its manufacturing markets sliding away and had to give a profits warning.

But the results of the current

improves. The board is optimistic "that a satisfactory recovery in the group's performance compared with that in 1993 is under way. Last year BSG had pre-tax profits of 210.5m. but suffered a 27 per cent fall in operating profits.
"There are two distinctive

operations sitting together, but not very well together," says Mr Marton. He talks frequently of "critical mass" and the need to create more of it. BSG is spread widely, but it is spread thinly. It is active in sectors where there has been considerable realignment. In the automotive components sector, consolidation has been taking place -

hence the recent takeover of Linread by McKechnie. Britax now "is not large enough to be a major player", says Mr Marton. It nearly has the necessary mass to be that in mirrors, it has some way to go in lighting and a long way to go in sunroufs. The hope at BSG is that greater independence will stimulate growth.

On the vehicle side, Bristol Street Motors, with Jessups, will be "reasonably near" to achieving this critical mass. By adding 12 selling sites in south-

Midlands and the north, BSG thinks that it will be about sixth in the pecking order of But Jessups, which last year had pre-tax losses of £500,000. is not coming cheaply. BSG's share offer values its ordinary shares at 140p against an overnight price of 98p. BSG is offer ing 15 new shares for every eight Jessups ordinaries and 110.35p cash for every Jessups preference. There is a cash alternative of 125.625p for the Jessups ordinaries, but that is dependent on the ordinary offer becoming unconditional. So far BSG has received

undertakings to accept the offer for 27.5 per cent of the ordinary share capital and 18.1 per cent of the preference. Through Morgan Grenfell, BSG is issuing 18.7m new shares, about 6.7 per cent of its enlarged share capital. To the extent that some of these need to be sold to meet the cash alternative, Morgan Grenfell is underwriting their sale at 67p.

The immediate financial effect of the takeover on BSG will be to raise its gearing to more than 45 per cent, com-pered with 23 per cent at the end of 1998.

### BTR may sell **ADS Anker** subsidiary

BTR, the industrial conglomerate, yesterday indicated that it was considering selling ADS Anker, its German-based subsidiary which specialises in electronic point of sale

In response to a question at the annual meeting in London yesterday on whether BTR should dispose of the subsid-iary, Mr Robert Faircloth, BTR's chief operating officer,

"It is a course that we are currently exploring but at the same time we are putting management and diligence into getting the best out of the business that we can.' According to Mr Faircloth ADS Anker has sales of under £100m and is making a small

Mr Norman Ireland, BTR's chairman, said the company's confident view for the current financial year, first disclosed

in March, had not changed "America and Australia continue with strong order posi-tions in most of their markets while in the UK, orders ... have continued to improve."

However, overcapacity in a number of sectors was affecting the company's ability to improve margins.

APPOINTMENTS ADVERTISIN

# All-round expansion boosts Alba by 40%

Alba, which earlier this month acquired Goodmans Industries, a rival consumer electronics group, for some £3.6m, yesterday reported sharply higher full year profits,

Pre-tax profits increased by 40 per cent to £7.39m in the year to March 31 from £5.05m last time when the outcome was reduced by a net £791,000 in provisions and closure

Turnover from continuing operations rose by 15 per cent to £126.3m against £109.9m, when discontinued operations added a further £3.59m. Mr John Harris, chairman, said the UK companies showed

"strong and consistent growth, greatly outperforming the pattern of the consumer electronics market as a whole". He said all the businesses made a positive contribution to

operating profits which increased from £6.3m to Net interest costs fell to £351,000 (£467,000) as net borrowings fell to £8.55m (£9.53m),

# Tunstall ahead to £3.28m and seeks expansion

By David Blackwell

Tunstall Group, market loader in emergency communication systems for the elderly, raised pre-tax profits from £3.17m to 53.28m in the six months to

Turnover increased from £22.2m to £23.3m, including £658,000 from the Dutch subsidiary acquired last October, which contributed £84,000 to profit.

Describing the results as "extremely good", Mr Michael Dawson, chairman, said pros-pects for the full year were encouraging with the order book for the core business 17 per cent up the same period last year.

The group, which also makes security systems and has a contract electronics manufacturing arm, increased direct exports from the UK by 42 per cent to £1.7m.

The total oversess contribution to sales eased to £4.4m. held back by tough trading conditions in Germany.

The profit also included £63,000 from associates - distribution companies in Spain Norway and Australia where the group sees algnificant opportunities for expension. Capital expenditure at \$2.6m equalled last year and is expected to have doubled by the end

of 1994 end of 1996 the contract electronics division, known as Mion, would employ 600 people and contribute 225m to group turnover.

Anchor Line over the 1988 acquisition of Tann-Synchron ome begins next month. Legal costs, which by the end of March amounted to £454,000, have been written off as

Earnings per share rose from 6.6p to 7p. The interim dividend is raised from 1.25p to 1.35p.

# Archer still affected by problems at Lloyd's

The problems of Lloyd's of London continued to adversely affect the results of Archer Group Holdings, one of two agencies at the market which have a full stock exchange list-

ing, writes Richard Lapper. Archer, which administers 15 syndicates and is the fourth largest managing agency, yesterday reported pre-tax losses of £430,000, compared with a restated £550,000, for the six

months to March 31. Profit commission earned by the agency in the 1991 year amounted to £1.1m (restated £1.4m) but were not received by the group until after the end of March.

Lloyd's, which reports its results three years in arrears, earlier this month announced losses of £2.05bn for the 1991 year.

the reporting period - fell to £1.9m (£2.5m). Despite an increase in capacity managed fees were reduced from 0.6 per cent to 0.5 per cent of Names

capacity. Expenses rose to £4.57m (£3.77m), while underwriting agency operating losses amounted to £491,000 (£713,000). Insurance services suffered operating lusses of .(000,812 of £13,000).

Mr Bryan Kellett, chairman said that prospects for the 1992 and 1993 underwriting years. the results of which Lloyd's will report in the next two years, were improving.

Losses per share were ip (1.3p) but the group said it was maintaining the interim dividend at 0.5p in recognition of improving fortunes.

# Acatos up 9% despite squeeze on margins

By David Blackwell

A rise of more than 50 per cent in the average price of edible oils over the last 18 months has put increasing pressure on margins at Acatos & Hutcheson, the edible oils and fats

manufacturing group.

For the six months to April 3 the group achieved a 9 per cent rise in pre-tax profits to 25.59m (£5.14m) on turnover ahead 17 per cent at £123.1m (£105m).

The bulk of the group's business lies in supplying own brand oils and fats to UK supermarkets. Mr Ian Hutcheson, chairman, said the insistence of some of the group's customers that prices should be held "in the face of unavoidable cost increases

enced". Nevertheless, Acatos had

Earnings per share rose to 11.4p (10.4p). The interim dividend is lifted to 3.5p (3p).

Last November the group announced that it would be closing its edible oils refinery at Bootle, Merseyside. Yesterday the group said that the 250-strong workforce had been guaranteed employment to the end of December, and would work on dismantling and decommissioning the plant when it shuts later this year. Mr Hutcheson said that the

full benefit of the closure would not be felt until the next financial year. Meanwhile, a planned reconstruction of the shareholding

of Acatos Limited in the company has been put on hold. Acatos Limited is private and owns the shares previously held by Mr Hutcheson, his family and other parties, which comprise 37.1 per cent of the ordinary capital.

### Atkins falls £252,000 into the red

Atkins Group, the Leicestershire-based hosiery manufacturer, swung from profits of £448,000 to losses of £252,000

pre-tax for the 12 months to The directors warned in Febmany that the year end results would be substantially lower because of a sharp slowdown

in trading during the final They said yesterday that the net costs of terminating the fabric operations, amounting to £298,000, were an important

Turnover improved from £17.9m to £19.1m, with the final three months generating only 1.5 per cent of growth. Losses per share emerged at 6.6p (earnings 9.81p). However,

the final dividend is maintained at 4.25p, making an 8.1p (7.85p) total.

Capital expenditure of £1.16m pushed year-end gearing up from 15 per cent to 38

Michael Woodbine Parish Chairman and Managing Director

66 Group assets 1993, taking investments at market value, were £40.510,012 (equal to 336,10p per stock unit) against £30,588,772 (253.78p per stock unit) the previous year. This compares with £107,261 when I took over in 1950. £1,000 invested in that year is now worth some £300,000 and that is after paying dividends and taxes in excess of £19 million over the period.

Stockholders will know there have recently been falls in all world markets, and rises in UK taxes, and prudence demands a reduction in this year's dividend. However, over the last 36 years I have been able to pay the dividend out of the current year's income without touching accumulated prolits, and even this year have almost succeeded, leaving undistributed profits of £11 million. This is quite apart from the potential unrealised profits of some £18 million. Finally, much of the 100-year history of your

Company and the El Oro Company is included in "Agent Adventures 1940-1943 and the end of Churchill's Dream" published by the Book Guild. ??

### ORDINARY.AND EXTRAORDINARY SHAREHOLDERS' MEETING OF 19 MAY 1994

On 19 May 1994 the second call of the ordinary and extraordinary Shareholders' Meeting was held in Turin and was presided over by Dott.

The Meeting firstly approved the management report of the Board of Directors and the company balance as at 31.12.1993 (certified by the auditors Arthur Andersen & Co. s.a.s.). The results of the profit and loss account were positive: after the allocation of Lit. 7,536 billion for the depreciation of material fixed assets and the distribution of necessary taxes, the net income amounted to 657.4 billion. The net income was allocated - after the subtraction of 32.8 billion attributed to the legal reserves - for the distribution of the dividend in the following measures:

- for ordinary shares 8.5% of the nominal value of Lit. 1,000, equal to Lit. 85 per share; - for savings shares 10.5% of the nominal value of Lit. 1,000, equal to Lit. 105 per share.

The remaining 63.3 billion were assigned to the Fund for reinvestments in Southern Italy.

The revision and certification of the Company's financial statements for the years 1994, 1995 and 1996 were assigned to Arthur Andersen & Co. s.a.s.

The Meeting also approved the modification of the following Articles of the by laws:

2 (Registered Office), 3 (Tenure), 7 (Indivisibility and voting right), 8 (Domicile), 9 (Obligations), 11 (Right of intervention), 13 (Convocation of Meeting), 14 (Validity of the constitution of the Meeting), 15 (Second and third calls), 16 (Presidency of the Meeting and voting method), 17 (Resolutions), 20 (Composition of the Board), 21 (President - Vice Presidents - Secretary), 22 (Assemblies), 24 (Minutes), 25 (Powers of the Board), 26 (Committees - Managing Directors), 28 (Signature of the firm), 30 (Reimbursement of expenses), 31 (Election - Imputations - Retribution), 33 (Balance - Rules of compilation), 34 (Allocation of income).

Article 29 (Responsibility of the Administrators) was suspended.

Furthermore the Meeting approved the merger project of the companies IRITEL, ITALCABLE, SIRM and TELESPAZIO with SIP, on the basis of the respective statements of assets and liabilities as at 31 December 1993. The start of the accounting and fiscal aspects is fixed as 1 January 1994, while the civil law aspects of the merger, of which Article 2504 bis, par. 1 and 2 of the civil code, will enter into force from the first day of the stock exchange month or the first day of the calendar month, whichever is earlier, both after the last of the registrations according to Article 2504

The approved exchange ratios are the following:

- 2.4 SIP ordinary shares (face value Lit. 1,000) for every ITALCABLE ordinary share (face value Lit. 1,000);

- 2.4 SIP savings shares (face value Lit. 1,000) for every ITALCABLE savings share (face value Lit. 1,000);

- 3,150 SIP ordinary shares (face value Lit. 1,000) for every IRITEL share (face value Lit. 1,000,000);

4.25 SIP ordinary shares (face value Lit. 1,000) for every SIRM share (face value Lit. 2,000);
2 SIP ordinary shares (face value Lit. 1,000) for every TELESPAZIO share (face value Lit. 1,000).

The share capital will consequently be increased, exclusively for the merger, to a maximum of Lit. 903,850,000,000, through the issue of a maximum number of 663,850,000 ordinary shares and a maximum number of 240,000,000 savings shares all with a nominal value of Lit. 1,000 each and with entitlement 1 January 1994, to be destined in return for the shares held by Shareholders of the Companies to be incorporated. The exact entity of the share capital of the incorporating Company on the operating date of the merger will be dependent upon the presentation of withdrawal statements from Shareholders in the Companies participating in the merger, on the existence of share amounts in the Companies participating in the merger owned by other Companies equally interested in the operation which do not give exchange securities, as well as the number of SIP ordinary shares issued against the requests to exercise the "SIP 1991 - 1994" Warrants received in the meantime.

Furthermore, with effect from the operation of the civil law aspects of the merger, Articles 1 (Denomination) and 4 (Object) of the by laws have been modified in relation to the creation of a single management, as well as Article 5 (Capital) in relation to the increase of the capital for the merger. The Meeting saw to the nomination of the members of the Board of Directors and Auditors for the three year period 1994 - 1996; the President of

the Board of Auditors is Prof. Ugo La Cava. The Soard of Directors, which met later the same day, named Dott. Ernesto Pascale President and Managing Director, Avv. Filippo Gagliano Vice President and Dott. Francesco Chirichigno, Ing. Vito Gamberale and Dott. Tomaso Tommasi di Vignano General Managers. Dott. Francesco Righetti was nominated Secretary to the Board of Directors.

### MEETING OF HOLDERS OF SAVINGS SHARES OF 20 MAY 1994

On 20 May 1994 in Turin the third call of the Meeting of holders of savings shares was held. The above mentioned Meeting approved the resolutions of the extraordinary SIP Shareholders Meeting of 19 May 1994 for the merger of IRITEL, ITALCABLE, SIRM and TELESPAZIO with SIP.

### **PAYMENT OF 1993 COMPANY DIVIDEND**

In order to implement the resolutions of the meeting the 1993 company dividend, in the previously indicated entity, before deductions, will be payable from 16 June 1994 at the Company branches in Turin (Via San Dalmazzo, 15) and in Rome (Via Flaminia, 189), at the authorised branches listed in the Notice of Shareholders' Meeting, as well as through Monte Titoli S.p.A. for the shares it administers. The payment will be made, both for ordinary and savings shares, against presentation of voucher no. 7.

### NOTICE TO HOLDERS OF "SIP 1991 - 1994" WARRANTS

Notice is hereby given to holders of "SIP 1991 - 1994" Warrants that from the 17 June 1994 the right to exercise the warrants, temporarily suspended from 7 April according to Article 2 last paragraph of the relative regulation, will again be possible. This notice is published in accordance with CONSOB decree no. 5553 of 14 November 1991.

Dolphin to

**Brewin** 

Brewin Dolphin, one of the UK's largest private client stockbrokers, will be valued at £30.9m when it joins the stock market next month.

Mr John Hall, managing

director, said the placing price of 150p had been cut by 10 per cent over the past couple of weeks reflecting the fall in share prices and the difficult new issues market.

The placing price repres nine times earnings in the year to December 10, before exceptional costs, while the notional yield is 4.8 per cent. hares in the closest comparable quoted company, BWD Securities, trade on an historic multiple of 10.5 with a yield of

4.3 per cent.
The placing will raise £5.7m net for the company, most of which will be used to repay borrowings outstanding from the management buy-out in 1992 and the acquisition of Bell Lawrie last year.

The flotation comprises a placing of 7.28m shares by Charterhouse of which some 2m are being placed with Bre-win Dolphin's own private clients. Employees are retaining over 85 per cent of their exist-ing shareholdings and will own 58.9 per cent of the

enlarged equity. Dealings start on June 9.

# **Enterprise shareholders** support bid for Lasmo

The controversial strategy of Mr Graham Hearne, chairman and chief executive of Enterprise Oil, was vindicated by shareholders yesterday as they voted overwhelmingly in support of his 21.3hn hostile bid for Lasmo, the rival oil explorer, at an extraordinary meeting in London.

Mr Hearne, who has been criticised over the logic of the all-paper bid and accused of megalomania, departed from his prepared text to thank investors after the vote. "It is nice to know our shareholders are behind us," he said.

Enterprise arrived at the meeting armed with proxies representing substantially more than 50 per cent of the total equity base. Of those, 99 per cent had voted in favour of the bid, said Mr Hearne. Investors made it clear, how

ever, that it was the all-paper bid as it currently stands which they backed. "I would hate to see Enterprise stumping up another 10 per cent in cash," one private shareholder remarked.

Mr Hearne said he stood by the package on offer, which combines Enterprise A shares and warrants - although the board would have to retain some flexibility.

It has been widely speculated that Enterprise would have to revise its offer to win over Lasmo investors, particularly

Graham Hearne: departed from prepared text to thank investors

as its shares have fallen from 445p to yesterday's 401p since the bid was launched.

Enterprise has several options - from introducing some form of cash which could be unpopular with its own shareholders, to revising the paper offer in the light of its own weaker price to bring the value of the bid back up to 150p a share.

The EGM lasted less than 30 minutes, with investors choosing to ignore Lasmo's

attempts at calling their company's accounting practices into question.

Mr Hearne was not content to let the matter lie, however, "Lasmo is trying to defend itself by publishing a series of increasingly tall stories designed to distract shareholders from the issues," he

Enterprise remained convinced that the deal would bring value to both sets of

### By Deborah Hargreaves

The coffee market kept up its recent sell-off yesterday as prices for the July futures con-tract at the London Commodity Exchange plunged by \$175 to \$2,032 a tonne.

Prices had recovered slightly from a \$200 drop at one stage in the day, but with hedge funds bailing out of the market, the price could fall further. It has slipped by over \$400 in

the past two days. The presence of large financial investors and speculators

in the coffee market has exaggerated the dramatic increase in prices over the past couple of months and this could now work in reverse with prices slipping quickly.

However, the coffee market remains well above its February level of \$1,200 a tonne and traders do not believe it will give up all of its gains as supplies are still tight.
"It's a healthy correction to

what had become an overheated market," one trader commented. Some analysts do not rule out a return to higher prices once the market draws breath. Coffee stocks remain low, they point out

Fresh coffee supplies are taking a long time to get on to the market with roasters holding on to stocks and new coffee deliveries being held back in anticipation of higher prices. Traders reported some disruption to the new Indonesian

crop reaching the market. The cocoa market was affected by the fall-out from coffee and the July futures price dropped by another £14 to

> other criteria. However, RMG draws up its league table by reference to the

# RTZ narrows Anglo's lead in mining league

### By Kenneth Gooding, Mining Correspondent

Anglo American Corporation of South Africa is still the world's most important mining company but RTZ Corporation of the UK, in second place, is closing the gap between them. This becomes clear from the latest Who Owns Who in Mining, which also shows that Broken Hill Proprietary, Australia's biggest company, and

are among the fastest-growing big mining companies. The Raw Materials Group of Sweden, which compiled the data, admits that RTZ can claim to be the world's largest mining company using many

TOP MINERS IN 1992

# Soya mayhem bemuses analysts

### By Laurie Morse in Chicago

last summer's devastating US floods, world grain traders are used to weather stirring up the grain futures markets. However, the mayhem it has wrought on soyabean prices this is unusual because the crop is only just planted and will not be particularly weather-sensitive for sev-

eral weeks. Prices for sovabean futures at the Chicago Board of Trade climbed 75 cents per bushel in the six trading days ending Monday, easily topping \$7 per bushel for delivery this summer, and approaching that level for new harvest delivery. Traders bought soyabean contracts thinking dryness in the northern plains would inhibit germination in newly-planted seeds. Weather forecasters fueled bullish speculation by predicting a long-term weather pattern would keep crop areas

Then, on Monday afternoon

MARKET REPORT

rains began to fall in lowa, Ohio, and Illinois, flushing the bulls out of the soyabean futures pits. In a heavy-volume rout on Tuesday and Wednesday, prices skidded more than 54 cents a bushel, forcing the Chicago Board of Trade to expand its limits on daily price declines. In late trading yesterday the prompt July position was down another 5% cents at

\$6.69% a bushel.

Agronomists are bemused by the market's rollercoaster ride, noting that US crop conditions are nearly as ideal today as in 1992, when the US had a binbusting record maize harvest and excellent soyabean yields. Last season's rains left ample subsoil moisture in most areas and warm dry weather this spring allowed early seedings and hence a longer growing

Analysts say two factor are contributing to the volatility of Chicago grain markets. Firstly, last year's small harvest has left very little room for error in

LME copper prices finish near day's lows

a tonne, down \$38.

The three months price fin-

Precious Metals continued

ing in the final minutes of after ished the kerb session at \$2,237

this season's crop - grain processors and exporters will have very little cushion if this year's harvest is delayed or smaller than forecast. Secondly, institutional investors who historically have scorned commodity markets have discovered their use as inflation hedges just as internal rules at the commodities exchanges have been adjusted to permit much larger speculative investments.

At the Chicago Board of Trade for example, a single speculator can now control as many as 30m bushels of maize and 21m bushels of soyabeans, twice the size allowable just two months ago. With the stakes higher, grain

markets have entered the world of high finance, and deep-pocketed fund managers are throwing their bets into the soyabean ring with unprecedented vigor. The result, traders say, is exaggerated daily price moves that don't always reflect the long-term fundamentals of the crop.

# Chilean copper saga ends as El Abra bid is accepted

Long and painful negotiations for 51 per cent of Chile's El Abra copper deposit came to a close yesterday when Codelco, the state copper company, accepted a revised offer of \$330m from Cyprus Minerals of

Cyprus has also agreed to end the joint venture, to be

called Sociedad Contractual Minera El Abra, \$299m and to guarantee further bank finance of \$699m to develop the deposit and construct an oxide-treatment plant

The original Cyprus offer, in association with Canada's Lac Minerals, which pulled out in April, had been for \$404m plus up to \$151m in investment capital. The lower price - and

Lac's withdrawal - came after discovery that the copper grade was 13.4 per cent lower than originally estimated.

El Abra, which is scheduled to start operating in mid-1997, is nevertheless expected to produce 225,000 tonnes of copper cathodes a year. The lower grade means pro-

Nevertheless, he stressed that Codelco had carned the for 10 per cent of the offer, would be signed soon. Final Chilean treasury \$330m plus a contracts would be concluded 49 per cent stake in profits. In return Codeico would not need to invest "a single peso", he

# Danes propose two-tier pricing system for EU milk

### By Deborah Hargreaves

Dairy farmers in the European Union could produce some of their milk at world prices and then sell it outside the EU as a way of beating restrictions imposed by EU milk quotas, according to a suggestion by the Danish Dairy Federation.

The federation made the proposal to the European Commission in February, but is now working out details of the plan, which is yet to be debated by agriculture ministers.

"We are still evaluating the pros and cons, but it would be a way of coping with the Gatt deal," said Mr Prebben Mikkelsen, head of the federation's

economics department The Danish proposals would operate a two-tier pricing system with farmers producing the bulk of their milk under an "A" quota for which they would receive high EU prices. But "B" quotas would also be available for farmers who were able to produce a little extra milk at marginal cost for the

export market. Producers would be paid for this "B" milk at world prices, which are up to a third lower than internal EU prices. The system would also be voluntary for producers who wanted to add a few cows to supplement their income.

Mr Jens Jakob Jakobsen, a

dairy farmer in northern Jutland with 112 cows echoes the scenticism of other producers when he says he is not sure he would produce more milk under such a system. "We could take on more cows but it depends on the price: I wouldn't do it at prices less than a third of what we get

now," he says. Many farmers are also concerned that the system would be difficult to police and would lead to erosion of prices for the rest of their output.

Denmark needs to secure its export markets as it produces three times more milk than it consumes. British farmers are scentical that such a scheme

would benefit them when quotas restrict output to only 85 per cent of the UK's needs. Overall, farmers in the EU problem of losing part of the world market currently produce 4bn litres or 4 per cent more milk than is consumed. Some of this finds its way into the manufacture

troversial butter mountains. in addition, the EU pays a subsidy for dairy products to be exported outside the union. These subsidies must be cut under the terms of the Gatt settlement, making it hard for European exporters to retain

of dairy products and the EU's

intervention system; the con-

years to 16.

overseas markets. Mr Finn Christiansen, executive, says the two-tier system would be one way round the

The EU has to cut subsidised cheese exports from a reference tonnage of 407,000 tonnes to 305,000 tonnes by 2000. But Mr Christiansen says the problem is more serious and will hit cheese hardest as EU exports to third countries reached 480,000 tonnes last year so the cuts will be greater. In addition, the EU must open up its market to provide access for other dairy exporting nations, meaning it must absorb another 105,000 tonnes tive director of MD Foods, the of cheese.

The small advance covered shap hass affecting finer merinos, up by 20 to 40 cents, and a wide range of small changes, including reductions for one or two crossbred categories. An ensist market impression is not unprecedented in the final weeks of telling season, which concludes in Australia at the end of June. Helping to confirm overall wool market confidence is the progress made in disposing of Australia's large wool stockpile. From July 1 this will be acid by fixed schedule, and as the deadline approaches heavier sales are reported, including seles for deterred delivery which make incode into the fitted achedule. The emphasis is on the possibility of lower supplies in relation to demand during the next lew months.

# Shares hold steady in nervous trading session

By Terry Byland, UK Stock Market Editor

A calmer mood prevailed in the UK stock market yesterday as investors came to terms with the blood-letting of the previous session. Confidence was challenged again on three occasions when the FT-SE futures contract bounced on the 3,000 support level, but the stock market closed little changed after moving narrowly during the session.

At the final reading of 3,019.7, the FT-SE Index showed a fall of only 1 point on the day. The FT-SE Mid 250, on the other hand, fell 13 points to 3,616.4 as the broader market waited for a more convincing lead a bid is accepted from the blue chips.

London opened firmly as a few bargain hunters were encouraged by improvement in the German

bund. For a while, the U	K stoc
market stood up against	forthe
falls in British governmen	+ bond
but it proved unable to do	
the stock index futures	SO MINE
down	LUTTLE

A gain of 10.5 on the Footsie turned to a fall of 16 within the first hour of trading, but 3,004.7 proved to be the day's low. For the rest of the session, the stock market followed the futures market, trying unsuccessfully to move ahead and dipping very briefly into negative

territory again in mid-afternoon. The general picture was one of nervousness, and reports of some buying at lower levels by the big investment institution were not borne out by the trading volume statistics. However, some analysts believe that UK stocks are undervalued at current levels.

Seaq-reported business of 613.5m shares compared with 646 im on the previous session. Stock Exchange statistics disclosed that retail business on Wednesday, when the Footsie dropped by 2.2 per cent, was worth £1.49bn, which was by no means a high volume figure.

At least two trading programmes were identified, only one of which was of significant size. But for the most part, the London stock market

continued to watch the European markets, which benefited from good inflation figures in Germany.

Towards the close, shares brightened when Wall Street opened higher but the pace flagged as the Dow turned less decisive to show a minor fall as London closed down for the day.

Traders commented that the market was beginning to slow down ad of the holiday closure on Monday of markets in London and New York. Today brings further tests for the markets in the form of important reports on economic progress on both sides of the Atlan-

The Confederation of British Industries presents its monthly report on business trends in the domestic economy. Investors will look carefully for signs that export volumes are recovering with the improvement in economic activity in Europe.

In the US, investors will today scan the gdp figures for the first quarter, and in particular the defla-tor figure which will give the Federal Reserve its latest guide to inflation pressure in the US economy.

Traders warned that the equity market remains at the mercy of the bond markets which, in turn, are dependent upon trends in German and US fixed interest stocks. With German interest rates now evidently on hold for the time being, the focus is expected to be on the US markets. An unimpressive performance by the US dollar since last week's decisive hike in key rates has left markets fearing that the

II FT-SE 100 INDEX OPTION (LIFFE) (\*3021) 210 per tuli index point 

the contract. Thereafter, June followed Est. vol Open int. the erratic mood in the bond markets, though occasionally went its own way on dealing

by independent traders. At the day's low, June fell to 2,990 before bouncing to return above the 3,000 level, a move repeated several times. The contract led the cash market for most of the day. The firm opening on Wall Street helped steady June and it closed at 3,008, up 9 on its previous close but at a 13 point discount to cash. Volume

was again good, reaching 15,702 contracts by the close. In the June Mid 250 on the FT-SE, 165 lots were dealt as the contract closed at 3,597. In traded options, Volume fell back from Wednesday's high levels and closed at 31,160 contracts. Of that total. 18378 was traded in the FT-SE

100 option and 1,925 in the Prudential Corporation was the most active stock ontion

Calls & Pals D Settlement prices and volumes	Section on prices and values are bean at 4.50pm. With a total of 1,064 contracts.

2.500 1.200 1.

"These were good profits numbers," said one analyst, "but there was some disappointment in the market with the dividend." The dividend total was increased by 11 per cent to 8.25p; best estimates in the market ranged up to 15 per

at a healthy 9.2m shares, the highest single day's business in the stock since March.

nel tunnel operator Eurotunnel of its well-signposted rights issue left the shares trailing 7 at 348p. However, doubts about the financial position of the group remain and one analyst pointed out that the rights issue and the the new financing from the group's creditor banks was still short of the £1.6bn Eurotunnel had said it needed.

raced ahead in the wake of recent strong buy notes from leading brokers, notably Kleinwort Benson. The broker said the recs offer outstanding value, with huge potential upside from the National Grid, plus the potential for share buy backs and takeover moves after the expiry of the golden shares in March 1995. London Electricity jumped

Midland 10 apiece to to 706p and 614p. Enterprise Oil shares suf-

Burmah Castrol dipped 9 to

FINANCIAL TIMES FRIDAY MAY 27 1994

# **Dollar woes continue**

The dollar was stable on foreign exchanges yesterday, but showed no signs of rallying from recent lows, writes Philip

Dealers said persistent bearish sentiment was depressing the dollar, while preparations for the long weekend made investors wary of taking positions. The Bank of Japan was seen supporting the US currency during Asian trading.

The dollar closed in London at DM1.6438 from DM1.6447. Against the yen it was slightly weaker at Y104.405 from Y104.455.

The Bank of England was reported to have intervened in the market to support the Canadian dollar. The North American currency closed in London at C\$1.3862 against the dollar from C\$1.3818 on Wednesday.

In Europe the drachma and the escudo remained under pressure. The Bundeshank left official interest rates unchanged at its council meet-

Sterling had a quiet day, with the sterling index closing at 79.9 from the previous close of 80. The pound closed at DM2.4821 from DM2.4848, and was barely changed at \$1.51.

■ Looking at the dollar's lackłustre performance, Mr Mark Geddes, treasury economist at Midland Global Markets, said neither growth nor interest rate arguments seemed to offer much support to the currency.

"The only thing preventing the dollar from falling further is the threat of central bank intervention," said Mr Geddes. He predicted, though, that central bank intervention would only be seen when the market was considered to be short of dollars - not the situa-

tion at present. Mr Geddes argued that support for the dollar can only come from concrete trade and market-access proposals from the Japanese government that are acceptable to the US authorities. These would probably be timed to coincide with the G7 summit in Naples in early July.

This assumes - a big if that prime minister Mr Tsutomu Hata will have the requisite authority to deliver sub-

■ Dealers said the Bank of Canada had been seen buying Canadian dollars through the broker market. Last week the BOC was seen selling Cana-

Some analysts attributed the currency's weakness to political uncertainty ahead of elec-tions in Quebec and overnight rumours that Canadian debt might be downgraded.

Although the BOC is known for its active involvement in the market to smooth the dollar, it was also suggested that being seen to sell its own currency last week had backfired on the central bank.

Mr Nick Parsons, treasury economist at CIBC in London, disputed this assessment saying: "By dealing on both sides of the movement, they have shown themselves to be extremely professional." He described the Bank's intervention as "well judged, well timed and well conceived."

Mr Parsons predicted that the dollar would probably be volatile in the run-up to the Quebec elections, expected in September. He noted that there had been similar currency volatility ahead of the Meech Lake and Charlottetown constitutional accords, in June 1990 and October 1992.

■ In Greece, the prime minister Mr Andreas Papandreou declared victory in the govern-

ment's defence of the currency. He said: "The battle for the drachma is continuing and is critical, but it has been won...I think that essentially the drachma issue is closed.

He said the issue of high interest rates, necessary in recent weeks to support the currency, would be over "within a few days, or a week or two at most." Key interbank rates are in three digits, and banks have started to raise rates to customers.

The prime minister's optimism was not shared in the markets where traders reported seeing a lot of private individuals trying to get their money out of Greece. Talk of a 15-20 per cent devaluation, in the air at the end of last week, has resurfaced.

Dealers said the drachma's woes were spilling over into the escudo. The Portuguese currency closed at Es104.1 against the D-Mark from Es103.5 on Wednesday. In fact, the escudo had been under fire in March and early April. before the drachma.

Some analysts said that the weakness of the escudo, drachma and Italian lira which closed at L970.6 against the D-Mark from L969 - was the result of investors fleeing the high-yielding Southern European countries for the safety of the D-Mark.

# Dow nudged lower by Philip Morris

#### Wall Street

US stocks were mixed yesterday morning but a sharp loss by Philip Morris nudged the bellwether blue chip index into negative territory, writes Frank McGurty in New York. By 1 pm, the Dow Jones Industrial Average was 1.53 lower at 3,753.77, while the more broadly based Standard & Poor's 500 was a scant 0.51 better at 456.85. Advancing issues led declines by 1,017 to 861 in volume of 149m shares.

In the secondary markets, the American SE composite eased 0.35 to 438.90, while the Nasdaq composite added 0.15 to

Activity was listless as investors began to square their positions ahead of the three-day

Memorial Day weekend. The market had only a shred of economic news to guide sentiment. The Labor Department said that initial claims for state unemployment benefit had receded by 1,000 last week, against expectations of a 7,000 decline. The figures, combined with an upward revision of the total number receiving jobless henefit suggested that the labour market was weakening. But the data, in isolation, was not viewed as especially compelling evidence of an economic slowdown, and had little impact on sentiment.

The bond market, meanwhile, offered neither an obstacle nor a source of encouragement for stocks. Treasury prices were virtually unchanged. A flurry of buying that followed the release of the numbers soon gave way to profit-taking on the heels of the previous session's late

Among the Dow components, Philip Morris stood as the only impediment to further improvement by the index, which had followed bonds to a modest gain during the previous session. On Wednesday, trading in Philip Morris was halted for the entire session. an unusual move which coincided with a day-long meeting

of the company's board. During the conference, the directors had considered a proposal to split the company's tohacco and food businesses into separate entities. After the markets closed, Philip Morris

A sharply stronger financial rand worked against shares, compounding the day's downward drift as the market struggled for fresh direction. Golds were undermined further as the bullion price weak-

The overall index closed 95 down at 5,390, industrials were 57 points lower at 6,598

such a move "for the foreseeable future"

When the stock resumed trading after a brief delay yesterday morning, it was quickly marked down \$3% to \$50 amid disappointment over the board's decision. Breaking the company up has been suggested as a way to limit the financial impact of future tobacco-related lawsuits.

The stock's downturn partially offset a big gain by Boeing. The aerospace group's share price jumped \$2% to \$46% on news that it was nearing completion of a \$5bn deal to deliver more than 50 commercial aircraft to China.

United Technologies, up \$1% at \$66%, and General Electric, \$1% ahead at \$48%, also made positive contributions.

After Wednesday's burst of activity, technology stocks were relatively quiet. Computer Associates International, however, climbed \$4 to \$41% in volume of 2.2m shares. The software company beat analysts' forecasts by posting fourth-quarter net income of 93 cents a share, against 57 cents

a year ago. Elsewhere, Compaq fell victim to profit-taking, giving back \$1% to \$118 after a \$3 gain

the previous session.
On the Nasdaq, Lotus Development dropped a further \$2% to \$61, after announcing no change in its initial, secondquarter earnings estimates of between 42 and 50 cents a share.

#### Canada

Toronto firmed in thin midday trade, the TSE 300 Composite index rising 10.10 to 4,302.47 in volume of 25.2m shares.

Golds, however, were weak with Placer Dome sinking C\$% to C\$30% and American Barrick down C\$% to C\$32%. The transportation sector led gains, with Laidlaw B shares

were up C\$% to C\$9%. The bank reporting season continued yesterday as Bank of Montreal eased C\$% to C\$25%, in spite of posting stronger second quarter earnings the previous session.

#### Mexico

early trade centred on selling of Telefonos de Mexico and on profit-taking. The IPC index fell 9.4 to 2,462.67. Financials were worst hit as a sector with Interacciones down 5 per cent. and Bancomer B by 2.2 per

São Paulo balanced profit-taking against Wednesday's 8.1 per cent local currency rise, and came out ahead at midsession. The Bovespa index, by 1300 local time, was up 374 at 23,392 in turnover of Cr285.5bn. Analysts said that they did not discount the possibility of some further profit-taking in

The overnight news that

2.07 to 332.52 with banks lead

European bond and equity markets yesterday and said that they had further room to fall, writes Our Markets Staff.

Inflationary pressures, the slowdown in German rate cuts and the fact that investors were still long in Europe after last year's bull market should keep bonds weak, said Mr Richard Davidson and Mr

Brian V. Mullaney. Equities, they said, still looked expensive at over twice book value and 7.4 times cash flow: "There may be some earnings momentum, but at these levels there is little earnings support".

FRANKFURT applied one extension of these arguments a switch out of cyclicals - to its carmakers, which underper-formed as the Dax index incorporated Wednesday's post bourse falls, and slid a fraction further to close 28.52 lower at 2.130.25. Turnover rose from DM8.2bn to DM8.5bn.

BMW dropped DM26 to DM856, Daimler DM19.50 to DM814.50 and Volkswagen DM11.50 to DM491.50. At UBS, been coming back from their highs in reflection of events on the other side of the Atlantic, where interest rate fears had been reversing the substantial

## **Montedison** dives after veto threat

News that a key advisory committee had recommended the European Commission to veto Montedison's planned joint chemicals venture with and Royal Dutch/Shell left the Italian group's shares adrift in early Milan trading. Montedison fell almost 9 per

cent and was suspended auto-

matically on the telematic system at L1,230. The share subsequently picked up to finish L21 easier at L1,329 as diplomats noted that the companies could still avoid a veto by adapting their plans. Montedison was confident that the plan could be rescued.

The Comit index dropped 18.84, or 2.5 per cent. to 740.95, below the 750 support level, prompting expectations that it was heading for 720.

Mr John Stewart at InterEu ropa in Milan commented that omestic investors, unsettled by political developments, had become more selective after the euphoria which followed the general election.

Fiat put in a firmer performances after recent falls amid continuing speculation that the government was preparing measures to boost car sales. The shares rose L82 to L6,701 as the company called for incentives along the lines of those already available else-

where in Europe. Stet added L53 to L5,484 and Sip was L25 higher at L4,308. BCI fell L236 or 4.4 per cent to L5.105 in response to its plans to raise L2.300bn through a series of share issues. Credito Italiano lost L98 to L2,813 as investors braced themselves for a similar exercise.

Empowerment in Virgin territory

#### ow many management, employment and recruitment words are we expected to absorb before we throw away the dictionary of

May

HALALA

American business terms? Hardly a month goes by without another supposedly new idea embodied in a freshly coined word creeps stealthily out of the software like a tarantula out of a banana crate, arousing a mixture of

terror and curiosity. The jargon has encroached steadily into the management schools, so much so that it has spawned an industry in expensive seminars held to explain what it all means.

Empowerment is one such concept that received the seminar treatment last week at an Economist conference in London. It has also been subjected to scrutiny by the Harbridge Consulting Group, which has just produced a report called Empowerment: what organisa-

tions really do.

Harbridge has attempted to discover what empowerment means and how it is being adopted in the UK. Most of the organisations it surveyed had reduced their employees in the

last five years. In practice it found that empowerment often meant individuals being asked to perform functions traditionally undertaken by management, one reason why most middle managers questioned in the survey felt threatened by

In companies where the concept had been widely adopted, says the Harbridge report, the managerial role had to change to that of a "willing helper". Managers not letting go was the most widely cited impedi-ment to its implementation. One of the most important

factors quoted by individuals expected to take more responsibility for decision making was a promise that their job would not be on the line if they made a mistake.

Some companies, said the report, were employing empow-erment without realising it. This applied to Richard Bran-son's Virgin Atlantic Airways, according to Nick Potts, its personnel director. He told the Economist seminar that empowerment "typically exists naturally with youth, vigour and smallness in organisations". The company had shunned empire-builders or specialists in its early days. Creating empires and classic organisational structures, he said, were the biggest barriers to empowerment.

As the business grew the company realised that staff, by default, had been given the freedom to make decisions and influence company direction. "We learned that people who decide and act, produce more profit than people who wait for instructions," he said. The three youngest directors,

he noted, all had arts back-grounds. Paul Griffiths, the commercial director, had a degree in music and raced motorcycles, Steve Ridgeway, marketing director, was a boating enthusiast. Potts himself used to be an opera singer.
"We realised we had a lot of

artists in all positions. This, I suppose is not surprising as creativity, flair and imagination are very important in the Virgin culture," said Potts. He might have been over-egging his point. What he didn't say was that the board is cover the costs." loaded with experienced airline people and as Virgin itself

rience, not for his ability to play the fiddle." The company began to look for people who had done "interesting things" or had career breaks. It sought out emotional people and looked for risk takers on the basis

admitted: "Griffiths was taken on for his 15 years airline expe-

is one huge gamble" Again this should have been qualified. Risk-taking attri-butes would not apply to flying staff, nor would they seem apparent in Nigel Primrose, the finance director, who is a chartered accountant.

that "entrepreneurial business

Potts argued that a gambling instinct was useful when trying to maximise revenue per seat on each flight. "The gam-ble is when to release seats and at what price. Clearly

there is no point in having the highest fares and no passen-gers or vice versa, a full plane where the ticket sales don't

Instead of expecting staff to use statistics to dictate decisions, the company preferred them to become "immersed in the job, build up this know-ledge through experience and gut feel, and then gamble on your instincts.

"We have found these people

make the best revenue managers. We trust their judgements and let them make the calls." Rather than just plugging gaps, recruitment was viewed strategically and undertaken by the best people in the com-pany, said Potts. Spotting and assessing, even "scavenging" for talent, he said, "is the most important thing you can do for a business – so you should invest a considerable amount

of time doing it". Virgin is currently doing just that, recruiting about 700 staff, mostly cabin crew, as it expands its route network.

So what are personnel direc-tors doing to find the best peo-ple? The Institute of Personnel Management commissioned a Mori poll of 123 UK personne directors to find out what recruitment methods they

The result shows that psy-chometric testing - the science of measuring abilities or personality traits - has overtaken panel interviewing as the favourite selection technique of personnel directors.

When asked which ones they used, among seven types of recruitment techniques, some 105 of the directors questioned - the biggest response to any of the techniques - said they used psychometric testing. Panel interviewing, used by 99 of them, was pushed into second place above meeting

the partner of the applicant, used by 34. Fourteen of the directors said they tested applicants with a problem calculated to induce stress or sur-prise and two of them went in for graphology, the study of handwriting. None of them used cranial assessment or astrology, the two other tech-

Asked to rate the success of the methods on a scale of nought to 10, the most popular rating for both panel inter-views and psychometric test-ing was seven, from just less than a third of respondents, although the testing just had the edge in popularity over

interviews.

niques in the questionnaire.

Breaking down the responses into four sectors - industrial, financial, business and the public sector - panel interviews were rated most highly among the public sector. Employers in the public sector also placed more store than any of the others on psycho-metric testing for achieving successful results. This is not so surprising since testing has been long established in the public sector, particularly in

the Civil Service. Of the 14 directors who used the stress/surprise technique in an interview, 10 of them gave it six, seven or eight out

Industrial employers scored highest when asked to rate meeting the applicant's partner. This may surprise some who would question how much influence a wife, husband or partner should have on their other half's job prospects.

The ratings for graphology were statistically useless but intriguing none the less. Both respondents who used it were directors of financial services companies. One of them reported that it was not at all successful in finding good recruits and the other gave it a

The IPM is currently formulating a policy on graphology in recruitment. While it has yet to make a formal pronouncement, the signs are that it will come down against it. Research carried out by the institute has failed to discover any evidence that it is an accurate predictor of someone's personality. This will be bad news for S G Warburg, the merchant bank, which has

been using it for years. Richard Donkin

## A NEW CAREER IN INVESTMENT MANAGEMENT

The opportunity to become an Investment Analyst with a major pension fund institution.

The company is responsible for the investment management of one of the largest pension funds in Britain. Its UK equity portfolio represents an important block of investment in British industry.

In this appointment you will work closely with experienced senior fund managers. You will be a member of a small team responsible for analysing companies in particular sectors of industry and commerce. You will be required to produce timely investment recommendations based on brokers research, your own independent analysis and direct communication with companies at a senior level of management.

To be a candidate you should be a graduate with professional experience in

financial analysis. You may presently be employed as an investment analyst in fund management or broking, or alternatively, you could be a qualified accountant or banker seeking a new career challenge. You will be expected to study for membership of the Institute of Investment Management and Research.

A fully competitive compensation package is offered and of course the chance to make a real impact in a major investment institution. To apply, please write with full CV to John Sears and Associates, 2 Queen Anne's Gate Buildings, Dartmouth Street, London SW1H 9BP, Fax: 071-222 3445 or Telephone 071-222 7733.

SENIOR POSITIONS IN GENERAL MANAGEMENT

## **Chief Executive**

London

to £57,600 + performance-related payments

With a headquarters in London, regional passport offices in Belfast, Glasgow, Liverpool, London, Newport and Peterborough and a records unit at Hayes, the Agency employs about 1500 staff and generates an annual income of about £80 million. A recent review of the Agency's status and functions confirmed the need for it to remain under direct government control while paving the way for further improvements in the way it conducts its business.

Key issues for the Agency include the need to sustain improvement in the speed of service to those applying for passports; to increase public awareness of the services the Agency supplies; to review the size, number and location of its offices; to progress towards the establishment of its financial regime as a trading fund, and to continue to provide for the highest standards of customer service through staff development.

You will be responsible to the Home Secretary for the overall management of the Agency and for ensuring that its service and financial aims and objectives are met. You will chair the Agency's Management Board and will attend meetings of the Advisory Board of officials and representatives of the private sector, whose function is to advise the Home Secretary on the Agency's plans and performance.

You must be able to offer an impressive record in general management in either the private or public sector. Excellent personnel management skills will be particularly important in leading a network organization which depends for its success on the high quality of its staff, though you will also need experience in financial management - ideally with some exposure to government accounting. Well-developed interpersonal, communication and presentation skills will also be crucial in establishing and maintaining credibility in this high-profile role.

This is a fixed-term appointment for three years with the possibility of extension. Your starting salary will depend upon the extent and quality of relevant experience you are able to bring to the post and will be between £39,365 and £57,612, including London Weighting allowance, with the opportunity to earn additional, performance-related payments.

For further details and an application form (to be returned by 17th June 1994), please write to Recruitment & Assessment Services, Alencon Link, Basingstoke, Hampshire RG21 1JB, telephone Basingstoke (0256) 468551 (24 hours) or fax (0256) 846374/846660. Please quote ref:

We welcome applications from candidates regardless of ethnic origin, religious belief, sex, sexual orientation or other irrelevant factor. You will not be ruled out on account of physical handicap or disability, provided that you can do the job satisfactority. People with disabilities and those from ethnic minorities are currently under-represented and their applications are particularly welcome.

## Chalmers University of Technology

School of Technology Management and Economics

#### **Professor in Industrial Management and Quality Assurance**

There are 10 chairs at the School of Technology Management and Economics including the new chair in Industrial management and Quality Assurance. The holder of the chair is expected to conduct research and to teach undergraduate as well as graduate courses. The faculty is expected to develop a funded research program in this field with special emphasis on quality management. The potential for funding is good.

#### Application

The application should be addressed to the Rector, Chalmer University of Technology, S-412 96 Gothenburg, Sweden. It should include a complete curriculum vitae and a short statement about scientific and educational achievements. The statement should highlight relevant studies and results. Special attention will be given to demonstrated leadership ability and willingness to carry out cooperative work. The 10 most pertinent scientific publications should be provided.

Four copies of the application documents should be mailed before June 9, 1994. For further information contact Professor Hans Bjoernson, Dean, phone +46 31-772 2494, fax +46 31-772 2497 or email hansbj @mot.chalmers.se.

From July 1st 1994 Chalmers University of Technology will be organised as a foundation.

# FUTURES TRADER

#### SUPERB SOFTS AND GRAINS START-UP OPPORTUNITY

#### Central London Package c.£60,000 + car + BUPA

This well-established UK trading house is seeking a self-motivated, highly self-confident generalist technical Trader to play a major role in the house's diversification into fund management and funded business.

Reporting to the Trading Manager and working in a small close-knit team, you will be responsible for carrying out trading decisions, market analysis and reporting, and the initiation and development of new concepts including

options, spreading, hedging, and portfolio analysis. This is an ideal next career step for a PC-literate Trader, aged up to 30, whose competent technical approach to markets has been developed during at least three years' trading experience which preferably includes two years of discretionary trading. Although a background in Softs and Grains is preferred, exposure to precious metals, interest rates and currencies would be of great interest. A knowledge of German would be an advantage. To apply, please send a full cv to David Walider, Ref: 6194/DW/FT, PA Consulting Group,

123 Buckingham Palace Road, London SW1W 9SR.

PAConsulting Group

Creating Business Advantage

#### INTERNAL AUDITOR - TREASURY c£35,000 + Banking Benefits

Our client, a major international bank, is seeking to strengthen their audit function by the addition of a treasury specialist auditor. The role is designed to evaluate the adequacy of controls within the financial markets operations of the bank. ## Investment Analyst

#### UK INSTITUTIONAL FUNDS

Rothschild Asset Management Limited manages funds for UK and international clients, both institutional and private, and is part of a global network within the Rothschild Group.

The continuing expansion of RAM's UK institutional fund management activities has created an opportunity to augment the company's research capability through the appointment of an additional investment analyst.

Operating as an integral part of the UK institutional funds team, the successful candidate will assume responsibility for a designated portfolio spanning several market sectors, and will provide high-quality research and investment advice to fund managers.

Candidates must have a good degree and either a minimum of two years' analytical experience in a major investing institution plus, preferably, an IIMR qualification, or a professional accounting qualification and a strong interest in financial markets (in which case, training will be provided as appropriate). A teamfocused approach and excellent interpersonal skills are essential as the role will entail exposure to the market and, occasionally, the client base in addition to close liaison with internal colleagues.

The post carries a competitive starting salary plus a range of banking benefits, and the potential for career development.

In the first instance, please send your full curriculum vitae, in the strictest confidence, to Tracy Phillips, Rothschild Asset Management Limited, Five Arrows House, St Swithin's Lane, London EC4N 8NR.

## **HEAD OF OPERATIONS**

C£50K + car + benefits

With \$30 billion under management Legal & General Investment Management is one of the U.K.'s leading institutional investors. Continuing success has led to the creation of this new role.

As Head of Operations you will be expected to manage and further develop our portfolio administration to meet increasing business growth. You will be responsible for the delivery of all administration, accounting and reporting services to satisfy demanding customer expectations and regulatory requirements.

In order to succeed in this challenging environment, you should have at least 10 years' relevant experience with a leading player in investment management. You will need to be a "hands on" person who combines sound technical knowledge with strong leadership and management skills. Most importantly you will have the presence and authority to gain the confidence of your own management team as well as senior directors throughout the business.

For an experienced operations professional seeking a new challenge this will be the ideal environment in which to develop and implement your own ideas within a successful and growing company.

Legal & General is an Equal Opportunities Employer

If you feel you have the business experience and personal qualities to succeed in this key role, please write with full C.V. including details of your current remuneration package quoting reference L305402/04 to Jo Sutherland, Barkers Response & Assessment, 30 Farringdon Street, London EC4A 4EA.

MANAGEMENT

## European Equities Trader

Major Investment House

∴ Negotiable

INVESTMENT

We are acting for one of the world's largest investment organisations, a major force in Europe and elsewhere in both retail and institutional markets. Worldwide the group controls assets totalling over £200 billion, and the London office, which boasts a powerful team of Fund Managers and Analysts, accounts for a significant and growing proportion of the whole.

This sustained success has created the demand for a Senior Trader. The Trading Desk, an integral part of the team, enjoys discretion, works closely with the Fund Managers and offers far more than a routine booking service. The group is also at the forefront of technological developments and new workstations have recently been installed.

The need is for an able European Equities Trader, offering several years' directly relevant experience with a well-known investment or securities firm. There are distinct prospects for career progression and the package offered will reflect the importance attatched to the role.

Please write with full details to Nigel Halsey, Managing Director, at the address below, or call 071-495 4446. Confidentiality will be observed.

## **1990-93 GRADUATES**

#### OPPORTUNITIES IN STRATEGY CONSULTING

Recent graduates/post-graduates (1990-93) in search of a new career challenge are required by our successful and growing Financial Services consulting practice in London and Germany.

Booz-Allen & Hamilton is one of the world's leading management and technology consulting firms with over 5,000 employees worldwide. We provide strategy, organisation and systems expertise to the world's leading corporations through seven specialised, global practices.

Our Financial Services practice advises the Boards of banks and insurers about their business strategy, organisation effectiveness and operational efficiency. All assignments provide intellectual challenge, demand creativity and require us to work across the traditional organisational boundaries of geography, industry and function.

You will have an outstanding record of achievement - academically, professionally and personally. Your first degree must be a 1st or 2:i (or equivalent). Experience in the financial services sector is desirable but not essential. Fluent German is necessary for our German offices.

Our continued success depends on attracting and retaining consultants of the highest calibre. Our compensation package, opportunities for promotion and career development programme (including MBA sponsorship if appropriate) reflect this fact.

Apply with CV (including school and university grades) and covering letter to: Amanda Taylor, Recruitment Co-ordinator, Booz-Allen & Hamilton, 100 Piccadilly, London W1V 9HA by Tuesday 7th June

#### **BOOZ•ALLEN & HAMILTON**

## Quantitative Analyst

#### INTERNATIONAL EQUITIES

Rothschild Asset Management Limited manages funds for UK and international clients, both institutional and private, and is part of a global network within the Rothschild Group.

Quantitative methods and systems are of key importance to our investment methodology, and we are now looking for an additional person with proven experience in a quantitative fund management environment. Reporting to the Director responsible sophisticated testing of hypotheses for model-building, and developing and maintaining asset allocation systems and stock selection models.

Operating as a key member of our Central Support Group, you will provide comprehensive in-house consultancy support for our operations in the major financial centres around the world, helping to co-ordinate new software and modelling developments as well as responding swiftly to local requirements. You will also update and run models for regular strategy meetings, document all models and systems in full, and make it your business to stay abreast of the latest market trends and systems

Probably in your mid-late twenties, you should have spent around five years in a quantitative environment. You will be self-motivated and capable of operating with a high degree of independence. You must also back strong technical skills with a sound understanding of financial markets.

The position carries a first-class reasumeration package including profit-sharing, company car and an attractive range of banking benefits. In the first instance, please send your full curriculum vitae in the strictest confidence to Rodney Lonsdale, Personnel Director, N M Rothschild & Sons Limited, New Court, St Swithin's Lane, London EC4P 4DU.

## Property Economist/Researcher

#### Norwich based

c£35,000 + car

The purpose of this role is to establish an economic forecasting and research function which will support all aspects of our property investment business from strategic and business

planning to portfolio and property selections. The successful applicant is likely to be educated to degree level in economics or a related subject and have had several years property analysis and research experience within a commercial environment.

The salary is negotiable, according to experience.

Additional benefits include a company car, performance related bonus and a comprehensive relocation package where appropriate. For the right candidate there are also excellent opportunities for long lerm career development within the Norwich Union Group.

C,

#### **ACCOUNTANCY COLUMN**

# Auditors hedge their bets on derivatives

The accounting treatment of financial instruments in the US is in flux, writes Richard Waters

he reported profits of US com-panies that use complex finan-cial instruments to manage heir risks look set to become much nore volatile, leading many compa-nies to stop using all but the simplest lerivative instruments.

There is a new unease (some might say, panic) among accountants and auditors in the US about the way many companies use - and account for - these financial instruments. The interest being shown by regulators and legislators has also sharpened the accounting profession's attention.

Recently announced losses from miscued corporate hedging strategies have set the tone. The \$102m after-tax loss (\$157m pre-tax) taken by Proctor & Gamble on two leveraged interest rate swaps last month has reverberated through the corporate and accounting worlds.

Of particular concern to the bean-counters is the fact that P&G had been treating these instruments as straightforward hedges – even though, it now says, they were highly risky bets that US and German inter-

est rates would rise. US accounting rules give companies considerable leeway in their treatment of financial instruments. If P&G had been exploiting the weaknesses in

the system, how many others?

A restatement of its figures last week by Caterpillar Financial Services vices, after a review by auditors Price Waterhouse, could become the norm as companies scrutinise their derivatives holdings more closely, and auditors (fearing shareholder lawsuits) become more cautious

Companies can pick either of two

1 \ & HAMILTO

utive Analyst

At the end of last year, Eastman Kodak wis sitting on paper losses of \$492m or derivatives contracts. It is a big use of interest exchange rate derivativs, but gives little information about how these instruments are

the paper losses could be realised it the near future. The com-pany plais to pay off part of its \$7bn debt by selling three of its busi-

ways to ccount for derivatives. One, known a hedge accounting, involves matching gains or losses on a financial instiment against the asset or liability t is intended to hedge. Any profits or losses on the instrument are deferred Provided the hedge works, these can be set off later against cor-responding losses or gains in the

Under he second method, all derivatives ar shown at market value at the end of each period, and any gains or losses are taken through the profit and loss account immediately. Mark-to-marke accounting produces vola-tile quaterly earnings. It fails to reflect the economic reality of an effective pedging strategy, critics say.

Companies, naturally, prefer hedge accounting. Under lax accounting rules, nany may have shovelled instruments into this category which

marked p market.

Auditors are clearly getting more wary. Cterpillar's financial services arm say it uses a variety of instruments o protect its net interest income, including interest rate swaps,

more relistically should have been

nesses. The cost of liquidating interest rate swaps associated with this debt could amount to between \$250m and \$350m, according to Mr Alex Henderson, an analyst at Prudential

The swaps have kept down the interest charges reported by Kodak in the past. A one-off charge now would beg the question why the swap losses weren't offset by a matching

swaptions. The last two, Price Waterhouse now says, should be marked to market (previously, Caterpillar had hedge-accounted the whole book.) Caterpillar Financial Services was

forced to restate its first quarter fig-ures to record a \$5.4m after-tax charge, cutting its profits for the period to \$6.4m. In future, its quarterly earnings will depend on the mar-ket value of those instruments at the end of each period.

If writing caps and swaptions was part of an overall risk-management strategy, as Caterpillar claims, then such an accounting treatment is non-sense - the figures do not reflect the economic reality. Caterpillar said it won't write caps and swaptions in future, but will stick to instruments that qualify for hedge accounting.

The problem for companies and their auditors is, how do you decide what is a hedge and what isn't?

There is little guidance. Rules have been developed for foreign exchange forward contracts and interest rate swaps, which have been applied by extension to other situations.

To justify using hedge accounting, companies normally have to meet

gain from pre-paying the debt. Like many big US companies, Kodak refuses to discuss its hedging policies beyond what appears in its accounts. The Securities and Exchange Commission has written to several big companies putting pressure on them to say more about their use of derivatives.

Kodak said it was not aware of reciving a letter.

fairly strict criteria. General practice is to apply three tests. A company's managers must identify the exposure they want to hedge; establish that the instrument will actually reduce this exposure; and designate which risks each instrument is intended to hedge.

Applying these principles in practice is not easy. "Modern risk management doesn't work that way," says Mr Bob Herz of Coopers & Lybrand. Com-panies pool their various exposures and manage risk on a portfolio basis. Some common uses of derivatives are uncontroversial. If companies borrow variable-rate money and use an interest rate swap to convert it to

(rather than treating the two parts of the transaction separately). Others situations are less clear-cut. What about the use of forward contracts to hedge foreign exchange expo-sures on sales which have not yet been completed? Most hig exporters hedge their expected future sales to some degree (on the assumption that their on-going business will continue to involve foreign currency receiv-

fixed-rate, the practice is to account

for this as synthetic fixed-rate debt

forward exchange rate agreement under such circumstances amounts to

The General Accounting Office -the investigative arm of Congress waded into the debate last week, urging the accounting profession to consider scrapping hedge accounting altogether. It said it isn't clear how direct the correlation must be between a hedge and the underlying asset or liability, or how often the effectiveness of the hedge needs to be reassessed. "Determining whether a hedge is operating effectively and

thus qualifies for hedge accounting is difficult in reality," the GAO said. The Financial Accounting Standards Board may also be leaning towards full mark-to-market account ing. Last June, it put forward some tentative conclusions about how to apply hedge accounting to all types of derivatives. In December, though, it went back to the drawing board.

It is now considering two possible approaches - to develop the hedge accounting approach, or to require all instruments to be marked to market. Under the second, trading profits and losses would be taken into the income statement, whereas gains or losses on derivatives which are used for riskmanagement purposes would be shown as an adjustment to equity.

There is another interesting accounting twist to the P&G saga. According to Bankers Trust, the consumer products company has bought other leveraged swaps from the bank in the past and made a profit on the deals. Why hasn't P&G reported these ables). But under the strictest as trading profits?

# Divisional Financial Controller

PEPSI-COLA INTERNATIONAL

#### South West London

Pepsi-Cola International (Europe), PepsiCo's European beverage business, has a turnover of \$2bn, having doubled in size over the last two years and being on track for continued double digit growth in the future. This growth has been achieved by strategic acquisitions and Joint Ventures, together with a substantial investment in the aggressive development of new and existing beverage brands. A small central ream, based at Richmond, Surrey, provides the strategic thrust for the Western and Eastern European businesses and co-ordinates the activities of the fully decentralised field operations.

International promotion has created the opportunity for a key individual to strengthen the Division's Finance function and to assist in the achievement of

Responsibility will be to the Vice-President, Finance for the integrity of financial control throughout the Division. Key areas of involvement will be to provide

Interested applicants should forward a comprehensive curriculum vitae, quoting ref: 188785, to Alan Dickinson FCMA, Executive Division, Michael Page Finance, Page House, 39-41 Parker St, London WC2B 5LH.

#### c £80,000 Package + Car

strategic financial oversight across the wide range of operating subsidiaries, working closely with the rax and treasury functions to maximise cross-border opportunities, ensuring compliance with statutory and parent company reporting requirements and coaching operating company finance functions in "best practice".

This is a high profile role, requiring international interface at all levels of management and providing substantial opportunity for "fast track", international career development. Candidates must, therefore, be exceptional.

The background we seek will include outstanding academic and professional qualifications, together with a ten-year track record of proven achievement to date in demanding, results-driven environments.

The remuneration package is designed to attract and retain the best. It will not be a limiting factor in the decision-making process.

#### exceed £9 million.

### **Chief Financial Officer**

This world dass organisation has demonstrated enterprise and endeavour above that of its most challenging competitors. By using a unique management style they have harnessed local manpower and resources to produce a thriving trading environment that continues to grow in profitability and size. The Moscow operation of 160 staff is a key element of their global operations. The strategic importance of this office, related domestic companies and the ever increasing transaction levels has lead to the creation of this role.

Working within a matrix management structure, you will combine management responsibility and accountability at the most senior levels within the group. Western style financial management systems have already been initiated. You will direct the financial and administrative policy onto its next phase of development. This will include adding new dimensions to the accounting and control of foreign and local currency trading activities. Beyond this challenging position further senior management prospects exist throughout the group.

The Person You will have a recognised accounting qualification alongside a minimum of five years experience in financial management and accounting systems. Your comprehensive technical knowledge and financial acumen will be supported by strong leadership skills and the ability to persuade, influence and direct the line management of the company. Clear thinking and confidence in your own ability are absolute pre-requisites. Strong preference will be given to candidates with experience of working in Central and Eastern Europe and those with Russian language ability.

Please send a full resumé with covering letter to the address/fax below quoting reference FT2170. All applications will be treated in strictest confidence.

c£32,000 + Car + Benefits

**SURREY** 

A world class leader in telecommunications, our client is now undergoing substantial expansion-The Mobile Telecommunications division (turnover £150m) provides services and solutions to the main public operators.

As a result of continued growth a need has arisen for a highly commercial and credible qualified accountant, who can assimilate information quickly and make an immediate impact on the business.

Working closely with the business sectors the successful candidate will be mainly responsible for financial and business analyses of their diverse activities and will be expected to contribute to the future development of the business. To be considered for this outstanding opportunity you will be a graduate with at least three years

post qualification experience gained within a fast changing commercial environment (Telecommunications experience would be an advantage but is not essential.) If you feel that you have the drive and commitment to assume responsibility for this immensely challenging and rewarding role please contact Viv Blake on 071-387 5400 (day) 0273 832096 (eve), alternatively write to him at Financial Selection Services, Drayton House, Gordon Street, London WC1H OAN, or fax your CV on 071-388 0857.

# A new catalyst for change

Activity has started to pick up, but the motive now is usually restructuring, writes Vanessa Houlder

elocation activity within the UK has started to pick up, after several quiet years. But the moves now being made by companies are different in character from those which took place at the turn of the decade, when relo-cation activity reached an ear-

"The theme has been retrenchment, rather than expansion," says Mr David Rees, a relocation specialist at accountants Ernst & Young.

Companies are no longer being driven out of their existing locations by high property costs and labour shortages, as they were in the late 1980s. Rather, the catalyst for many corporate relocations is the need to reorganise and ration-alise businesses.

Restructuring is also impor-tant in determining where mul-tinationals decide to locate. The creation of a single European market has allowed companies to seek economies of scale and rationalise the struc-West Mile or ousmesses and or more fragmented markets.

Instead of placing a national headquarters in each large European country, multina-tionals are establishing one European headquarters. Likewise, companies are tending to consolidate their European manufacturing operations into their most efficient or low-cost

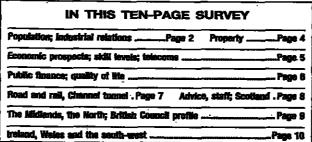

Examples of this trend includes the decision by Gillette of the US to cut excess European capacity by closing a razor-blade factory near Seville and transferring production to plants in west London and Berlin. In another example, CPC (UK), a subsidiary of the US food group, is moving producsoups and cubes from near Glasgow to more modern

plants in France and Italy. These upheavals within European industry have led to some acrimony between countries competing to retain and attract investment. Last year's decision by Hoover of the US to stop making vacuum cleaners at Dijon in France and move its operations to Scotland provoked charges that the UK was indulging in "social dumping" using lower wages and less favourable working conditions to lure the company away from France.

In recent years, the UK has attracted a disproportionate share of the EC's inward investment. In the last decade, the UK is calculated to have taken nearly 40 per cent of all non-EC investment made in Europe. After Belgium, the UK is home to a larger number of European headquarters of US companies than any other tres is becoming more intense. "The UK is facing greater com-petition both within Europe and globally," says Mr Elias van Herwaarden of Plant Loca-

tion International, a subsidiary of Price Waterhouse. US investors' attention is shifting to south-east Asia, he says. At the same time, Ireland, Northern France, and parts of Belgium, the Netherlands and the former eastern Germany are all fighting harder to win mobile

Even if the UK continues to attract a large number of projects coming into the EU, the European country, according scale of investment may be

Direct investment in the UK in 1992 amounted to £9.2hm, a £800m increase on the previous year. But inward investment is running at markedly reduced levels compared with 1989 and 1990. The UK will have to fight increasingly hard if it is to increase or even maintain its share of inward investment

coming into Europe. Advantages of investing in the UK include a relatively cheap and flexible workforce, factors that are reinforced by the UK's opt-out from the EU's "social chapter". Cultural and language considerations also play a part in securing investment from the US and Japan. But Britain cannot afford to be complacent. According to

Ernst & Young's Mr Rees, unimpressed by the UK's transport infrastructure and the skills of its workforce. Moreover, the perception that the UK is not "at the heart of Europe" worries some poten-Competition from rival cenden notes that there is an increasing trend for US companies to embark on smaller projects, valued at less than \$5m.
"Companies are moving step by step. There is an increased emphasis on flexibility with respect to adapting to changing market needs and circumstances," he says.

Similarly, if there is a second wave of investment from Japan, it is likely to stem from supplier and sub-contractor activities rather than largescale projects. The number of large Japanese deals has diminished, partly because so much investment was brought forward before the creation of the single European market as a result of fears of a potential "Fortress Europe".

Competition for investment has also increased within the UK. Last year's redrawing of the assisted areas map, when the government decided for the first time to give help to parts of London and the south and east coast has increased the pressure on long-standing assisted areas such as the

Another reason why it is harder for outlying parts of the country to attract investment is that some key factors driving companies out of London and the south-east, such as labour shortages and high property costs, have diminished in importance.

The gap between the cost of renting property in different parts of the country has narrowed. Whereas rents in the City of London have halved since 1990, those in, say, Manchester have hardly fallen. The 1995 rating revaluation, which will shift the rates burden from the south to the north, will further erode potential cost savings for companies moving out of London.

As a result, the incentive for companies to make long-dis-tance moves has diminished. Changes to the tax treatment of relocation expenses have also tended to discourage such

The cost of relocating increased substantially last vear when the government introduced a £8,000 ceiling on taxable allowances on relocation expenses. The impact, however, was substantially lessened this April when the Inland Revenue decided that tax would not be charged when an employer buys an employee's existing home.

The prospect of cutting property costs is the single most important reason for reloca-tions, according to a survey by Jones Lang Wootton of large companies that have moved out of London over the last decade.

But increasingly, operational considerations, such as the desire to consolidate businesses, are becoming more important. The JLW survey found that operational considerations accounted for half of the large corporate moves out of London last year, compared with a third of moves between 1983 and 1992.

corporate Large-scale restructuring and rationalisation promise to be increasingly important catalysts for relocations over the next few years.

COMMINGS

British Telecommunications, for example, is considering moving up to 10,000 jobs out of 76 London offices over the next three to five years to locations in and around the M25. As well as cutting property costs, the proposals would allow BT to

reduce its employees' commuting times and to pioneer new forms of working based on advanced telecommunications.

Overall, the pace of UK relocation appears to be picking up. Last year, just eight comjobs out of central London, But this year, twice as many such moves are expected. A further 11 moves have already been planned for 1995 and 1996.

In addition, they - and the

south-east Asia.

As the worldwide recession lifts, the number of multinational and domestic companies

planning relocations is likely to increase. But competition from other European centres and the diminished attractions of moving long distances within the UK will add to the pressures as the regions try to

ome parts of the British Sgovernment have made it as easy as they can for foreign companies to move into being ready to argue with those parts of the government which sometimes make it diffi-

The clash is of cultures: the Department of Trade and Industry and the Department of Employment want inward investment to improve the overseas trade balance, to create jobs and broaden Britain's economic and, particularly, manufacturing base. The Home Office, on the other hand, is rightly charged with enforcing

tight immigration controls to prevent foreigners from taking jobs that could be done by European nationals.

arise when an inward investor from, say, the US or south-east Asia wants to bring in more key workers than immigration officials think may be strictly necessary. About 18 months ago, growing tensions forced all parties to agree procedures to try to smooth problems.

The rules, however, are unpublished because each case is judged on its merits. However, they are pragmatic and decisions are at least now made quickly, where previ-

lan Hamilton Fazey on problems – and the agencies that solve them

#### D:LL\_II. tor toreign

ously people and companies were sometimes kept waiting for months, much to the frustration of inward investment ncies and promoters.

Basically, criteria for the start-up phase of an inward investment - when a high proportion of the workforce may need to be brought in from abroad to get the operation going and train their locally-re-

cruited successors - are relaxed. Short-term training or liaison posts also get sympathetic treatment, even if there is long-term rotation of foreign personnel in them.

However, the proportion of jobs to be held eventually by foreign nationals on a permanent basis is likely to involve more negotiation, just as it would be, say, for European Department of Trade and

companies operating in the US. The rest of the process of inward investment is straightforward - and designed to make it as easy as possible for medium-sized or smaller companies which do not have the in-house expertise, or ready

access to consultancy services, of bigger companies. The Foreign Office and

Industry operate a global network of commercial staff attached to British embassies or, in the US or Japan, in specially set-up trade advice

Philip Coggan looks at how Britain compares with the rest of Europe

# Population grows grey

The UK population is growing. And, like that of much of western Europe, it is also

But while the increase in the pensioner population may cause problems in the middle of the Zist century, there is some good news in the shorter

The number of people of working age (defined as men aged 16-64, and women aged 16-59) is still increasing, according to the Office of Population Censuses and Surveys. From around 35.5m in 1992, the working population is expected to increase to around 37.4m by 2011, while the overall UK population grows from just under 58m to 61.25m over the

The birth rate in the UK has edged up in recent years after the lows of the late 1970s and

The UK birth rate has edged up in recent years but the fertility rate is still below the replacement level

early 1980s; live births per 1,000 people were 13.5 in 1992, compared with an average of 12.9 m 1981-85.

Nevertheless, the fertility rate is still below the replacement level of 2.1. Children were 25 per cent of the population in 1971, but are expected to be only 18 per cent

It is only a low death rate, as life expectancy marches ever upwards, that keeps the population growing. (Immigration plays a small part. The UK had a net inflow of 34,000 people in 1992.) The average male born in 1990 had a life expectancy of 73 years, compared with 67.9 years in 1961; female life expectancy grew from 73.8 to 78.5 years over the same period.

The UK's population profile is not too bad in European terms. In terms of maintaining a future workforce, the key is the number of those aged 0-19 as a proportion of those neonle of working age. Here the champion is Ireland, which has more than one child for every person of working age, while the UK ranks seventh out of 17 countries surveyed by the OPCS in 1990-91.

Bottom of the league is Germany, which has only one child for every three people of working age.

The number of 16-year-olds joining the UK workforce has been steadily declining from a Dependency ratios

elderly will undoubtedly create peak of 936,000 in 1981 and may social costs (particularly in have reached a trough of terms of health and pensions 628,000 in 1993. It is now expected to rise gently during provision) which will probably be reflected in higher taxes for the rest of the century.

The UK does not rank quite so well on the greying factor. There were 39 people aged over 60 for every 100 of working age in 1990-91, the third highest total of the European nations studied. (Sweden was the greyest with 43 people over 60 for every 100 of working age.) According to the OPCS,

there were 8.93m people of pensionable age in England and Wales in 1981, 18 per cent of the total; by 1991, there were 9.45m, 18.5 per cent of the total. And within the ranks of the pensioners, the number of people aged over 75 increased from 2.93m (5.9 per cent of the total population) in 1981 to 3.62m (7.1 per cent) in 1991. The growing numbers of the However, greying is a European-wide problem. About a fifth of the European Union's 320m citizens are aged over 60 (with 20m aged over 74). By 2010, the proportion of over-60s is projected to grow to 23 per cent and to 25 per cent by 2040. The only countries expected to have a pensioner population of

the working population.

are Portugal and Ireland. Steps may be taken to alleviate potential problems by increasing the pensionable age. In the UK, the plan is for the retirement age for women to be increased to 65, to match that of men. This change will be phased in between the years

less than 20 per cent in 2010

Britain nowadays because they face "fewer statutory constraints" in the way they handle labour than in mainland European countries. As a result, there is "greater scope" for them to introduce "innovatory practices".

He also points to the attractiveness of the UK's low labour costs for some inward investors. This is not so much a case of low pay. Hourly earnings in the UK remain substantially

Companies operating in Britain have a much lower non-wage labour cost burden to carry than those in any other European country except ireland. This provides the UK with a distinct cost advantage compared with its main trading competitors.

The latest comparative labour cost statistics (taking into account exchange rate differences) compiled by the US-Bureau of Labour Statistics indicate that the UK manufacturing employers' labour costs in 1992 averaged \$14.69 an hour compared with \$16.16 an hour in Japan, \$16.17 an hour in the US and \$25.94 an hour in Ger-

# Should've talked to CNT.

Most of CNT's land already has outline planning permission. In the new towns where our land lies, good design practice was the norm from day one, creating an environment with good communications, amenities and infrastructure.

And providing a landscape in which beautiful and often startling buildings naturally fit.

We have government authority to provide detailed planning approval and our relationship with local planners means we'll try to find ways to help you achieve your dream building.

Or if you want to re-locate even faster, we own all kinds of stylish premises for sale or rent – from small units to landmark

buildings perfect for corporate headquarters.

So don't compromise. No matter what stage of relocation you're at, give us a call, we could help – and our services are free.

# Regional gap in cost of renting gets narrower

The UK property market has begun its recovery, after the deepest downturn since the war. But the legacy of the property recession will have a lasting impact on companies which are considering a relocation.

The fall in property costs over the past three years has relieved some companies of pressure to uproot from their existing locations. Moreover, the incentive for a company to move long distances has diminished, as the gap between the cost of renting property in different parts of the country has narrowed

The property recession hit London far more severely than most regional centres, helping to even out some of the formerly sharp variations in property costs and supply around the country.

For example, in the City of London, which was particularly badly affected by the downturn, top quality property can be rented for less than half the £70 per sq ft it fetched at the peak of the market in 1988. In Manchester, by contrast, top rents have scarcely fallen during the recession from a

Many tenants are locked into leases which require them to pay far more than the market rate

peak of £21 per sq ft.

Another consequence of the property downturn which has duced the flow of relocations is that many companies are unable to move premises because of the difficulty of disposing of existing leases. Many tenants are locked into leases which require them to pay far more than the market rate, creating difficulties in assigning leases to another

which have the freedom to move have the opportunity of securing property at rents close to the bottom of the market. Office rents have fallen by about 40 per cent from their peak and industrial rents are down by about 20 per cent, according to Hillier Parker, chartered surveyors.

flexible leases, although as

According to Chesterton, the tenant demand increases, the incentives on offer from property advisers, "regional centres offer little to potential landlords, such as rent-free relocators in terms of readily periods and cash contributions for fitting out costs, are declining. Most tenants are available office space. Major requirements exceed supply in

many regional centres. Birmingham, for instance, has some of the lowest levels of available space of any large UK office centres. At the end of 1993, there was about 789,000 sq ft of empty space available at a cost of up to £20 per sq ft - out of a total market of 16m sq ft.

Developers are gradually

182m sq ft of industrial property is available to let. new buildings, which account for just 9 per cent of the total available space. Tenant demand has been strongest for large distribution warehouses adjacent to motorways.

Another factor affecting relocation decisions is the impact of the revaluation of the Uniform Business Rate in 1995, which is based on rental values in April 1993.

The revaluation is likely to shift the rates burden from the

is set to increase Herring Baker Harris, a firm of surveyors, has estimated that the proportion of the business rates bill shouldered by industrial occupiers will rise from 18 per cent to 22 per cent, while that borne by retailers will remain broadly stable and that from offices may decline from 29 per cent to

Philip Coggan assesses the prospects for Britain's economy

Crumbs of comfort for pessimists

So it is not surprising that many fear the current UK recovery will eventually run into the same problems.

Throughout 1993, the pessimists were repeatedly disappointed. Growth was stronger and inflation lower than they had expected. Indeed, interest rates and inflation were at their lowest levels for a generation.

Such conditions were all the more remarkable when one considers the policy vacuum which followed sterling's ejec-tion from the Exchange Rate Mechanism in September 1992. Many commentators thought that inflation was bound to revive 12-18 months later, as it had done after previous deval-

They evidently underestimated the deflationary pressures which were present in the world and UK

economies, in early 1994, the oil price dropped back, in real terms, to the levels reached before the first oil shock in

The debt hangover from the late 1980s boom has made both companies and consumers nervous about borrowing. broad money supply growth has been sluggish in the UK. Central banks remain vigilant against inflation and have kept real interest rates at high levels, despite deep recessions. Nevertheless, all the above factors may merely be cyclical,

rather than structural. One does not have to look too hard at the economic statistics to find evidence that the UK's old problems may return: a pick-up in the rate of growth of average earnings, a high budget deficit, a trade account that stayed in deficit throughout the recession and is now widening, an excess of

lack of investment.

An equally forthright school of thought believes that the current recovery will be too feeble to bring much prosperity to the average Briton, or to make much of a dent in the unemployment totals. The tax increases introduced by Chancellors Norman Lamont and Kenneth Clarke, which will raise between £15bn and £17bn over the next three fiscal years, are expected to prove a drag on economic growth.
Often, these debates about

the prospects for the UK economy become bogged down in sterile arguments about the size of the "output gap". According to this theory, there is a trend rate of output growth. If the economy is growing above the trendline, canacity constraints are likely

private consumption and a in the late 1980s. If the economy is growing below the trendline, there is a "gap", and the country can enjoy non-inflationary growth.

The problem is that there is no consensus on the trend rate of growth, nor on the size of

the output gap. Pessimists, like The old problems may return: a pick-up in the

Mr Bill Martin of UBS, think that the gap is small and that "the economy is structurally deficient, having neither ample spare capacity nor an adequate internationally-trading sector." But the International Monetary Fund estimates an output gap of 4-5 per cent which, if correct would allow the UK many years of non-inflationary GDP

growth at, say, 3 per cent. International investors

the UK's long inflationary history and reflect that, when push came to shove, the monetary authorities have always gone for the easy option of devaluation and inflation.

Economic policy was

earnings growth rate, a budget deficit, too much private consumption and a lack of investment

sterling's departure from the ERM. Piece by piece, the authorities have put together a monetary framework designed both to gain credibility with the financial markets and to allow the UK economy to recover. The Bank of England now has a much more prominent role. It publishes a quarterly inflation report and has the responsibility for the

timing of interest rate moves. The theory is that "political" influences on interest rate moves should be avoided. although the chancellor still has the final decision on

tions. If so, Britain will enjoy

Financial markets do not yet seem ready to accept the anti-inflationary credentials of the new system. There is certainly a perception that the Bank is much more keen than the chancellor on getting inflation down to the lower

half of the 1-4 per cent target

The other traditional British problem, the balance of payments deficit, is a further source of debate. The deficit appears to be deteriorating; on the current account, from £1.8hn in the third quarter of 1993 to £2.6bn in the fourth quarter; and on visible trade, from £1.77bn in 1993's fourth quarter to £2.12bm in the first quarter of 1994.

The official statistics also appear to show that British exporters used the devaluation to raise prices, rather than to increase their market chare. Thus, the trend in trade is

Cost of telephone service

However, doubt is cast on these figures by the Confederation of British Industry's survey, which appears to show that exporters have been cutting prices. And the switch to the intrastat system of collecting statistics (based on VAT receipts, rather than customs returns) for trade with the European Union has led some to believe that the new figures are understating imports.

Doubts about the quality of more difficult than usual to be definitive about the economy's prospects. But for a government seeking re-election in 1996 or 1997, neither of the two most likely scenarios have much appeal

The first is that the economy will accelerate and run into balance of payments and inflationary constraints, causing the authorities to slam on the monetary brakes.

The other is that growth will ntinue at a modest, non-inflationary pace but without creating the "feel good" factor of rising prosperity and low unemployment that makes vot-

ccurate comparisons between skill levels in the UK and its main competitors such as France, Germany and Japan are difficult to make.

Indeed, they may not always be a fair measure of workforce skills. In Japan, for example, training is much less likely than in Europe to lead to a

Nevertheless, there is common agreement that the UK has a skills problem. And, despite the recession and largescale unemployment, severe skills shortages are forecast in a number of occupations, including high-tech industries,

unless the problem is solved. The National Institute of Economic and Social Research, the London-based organisation has estimated that in 1988-89 the proportion of the workforce with higher educational qualifications was roughly comparable to that in Germany, whereas the proportion with an intermediate level qualification, that is at craft or supervisory level, was far lower than in France or Germany.

It is a problem that many in the UK regard as the central difficulty affecting UK manufacturing. Indeed, Mr Michael Heseltine, trade and industry secretary, who this week published a white paper on competitiveness, has said he considers training and education as the second most important factor in competitiveness after the management of the econ-

A recent report, from a Commons select committee for trade and industry, said: "Given that it is becoming ever easier to transfer capital and technology around the world, the skills of the workforce will increasingly be the determining factor in the competitive-So what is the UK government and industry itself doing

Indeed, national targets for improved attainment of qualifications among the workforce and young people were drawn up by the CBI, and endorsed by the government.

64 53

lent of two "A" levels.

Attainment of the targets may not, however, be sufficient to create a workforce that can compete. Indeed, the National Advisory Council for Education and Training Targets, an employer-led body which is monitoring the targets, has warned that some targets may have to be higher if the UK is to match the attainment levels of its competitors' workforces.

ment by the government has employer-led training and enterprise councils (Tecs) in Rngland and Wales, and 14 local enterprise companies

The government's intention is the private sector, from which these bodies' non-executive boards are mainly drawn. the drive to improve skills in the UK as well as foster economic regeneration in their local areas

Tecs and Lecs have been in existence for a little over three years and there is growing evilence that they are generally improving the attainment of qualifications among young people and the long-term unemployed. They are paid nearly £2bn a year by the gov-ernment to administer training

However, there is no measurement yet of whether Tecs have made any impact on improving the training of existing workers, this being a key group as 80 per cent of the workforce of the year 2000 is already in work.

The problem is not simple. According to a recent survey by Price Waterhouse, the management consultancy, the expenditure on training in the UK as a percentage of pay bills is reasonably in line with elsewhere in Europe. However, it is the UK's relative failure in basic education, according to the select committee, that makes employers' roles more difficult and expensive.

The government is seeking to address the latter problem, with the introduction of new vocational qualifications into schools, so as to cater for those who are not academically inclined. These reforms will take some time to introduce. At the same time Tecs, in partnership with other bodies such as local authorities, are come for all users except introducing a wide variety of strategies in their local areas to assist both existing employers and inward investors. These include initiatives such as Investors in People, an ment based on best management practice which helps

in-house training, as well as customised training. Tyneside Tec, in the north-east of England, working in partnership with the government's Employment Service and South Tyneside College, recently provided customised training for new employees being recruited by Onwa, a subsidiary of a Hong Kong television manufacturing company, which has opened a plant in the region.

# The showcase of Europe

Andrew Adonis looks at an extremely competitive telecoms market

Europe's phony, television and the new Britain is telecommunications showcase dia" services - from one net-work will enable them to slash Its government has pushed liberalisation and privatisation anywhere else on the

Not just in law or theory. In ractice, the UK telec market is more competitive than any other in the EU, or arguably in the world. More than 40 operators hold government telecoms licences, and at least a dozen are currently operating services in all or part

of the UK. At the national level, BT faces stiff competition from Mercury, a subsidiary of Cable & Wireless, an experienced international telecoms operator. Mercury offers a nationwide service - including ISDN - to the business and

residential markets. Launched a decade ago at the privatisation of British communications - then the monopoly operator - Mercury has won 11 per cent of the national market. Most of its custom comes from the business sector, especially in the City of London, where it has about two-thirds of outgoing long-distance traffic secured through cheaper tariff pack-

ages than those offered by BT. A recent survey by Analysys, UK consultancy, shows the UK to be cheaper than France, Germany and Italy for teleresidential customers and some one-line businesses, where France comes out

The City is the focus of the most intense competition in the UK. Apart from BT and Mercury, three other operators are competing for business with dedicated networks - US operators MFS and Colt, and Videotron, a Canadian operator which also has licences to provide combined cable television and telephone services elsewhere in London.

A third operator with a dedi-cated long-distance network and facilities for direct connec tions to large City institutions is also about to join the fray.
 Energis, a subsidiary of the National Grid, is about to armch a network erected on the UK's long-distance electricity pylons. It is likely to engage in a price war with BT and Mercuty - putting Mercury on the defensive for the first time. All of which is good news for business. As is the competition in urban areas across Britain between BT and the cable companies – mostly US-owned – building combined television

The highest profile help comes in the form of the regional selective assistance provided by the government, which can make a significant cash grant towards the costs of a business locating in the assisted areas. Smaller firms may also be eligible for regional investment grants.

But there are many worthwhile incentives in other forms, including cheap accommodation, help with training and tax incentives for husinesses that locate in enterprise zones.

The cash grants provided in the assisted areas make them the most appealing places in the first instance for businesses seeking a new location. Nissan, for example, received two tranches of regional selective assistance worth £44m in total towards the capital costs of its plant at Sunderland, Tyne and Wear.

Regional selective assistance has made a substantial impact on employment in the assisted areas according to Mr Nick Mansley of PA Cambridge Economic Consultants, which last year published an evaluation of the scheme. This estimated that between 1985 and 1988, the scheme had created between 75,000 and 100,000 additional jobs at a net cost of £560 to

"For companies choosing to locate in the UK, it is on average the third most John Willman looks into the availability of public finance

# Getting some cash for your move

important factor after a pre-existing presence and the need to be in the UK market," says Mr Mansley.

In most of the assisted areas, a variety of local development bodies can offer further help in relocating a business. These include:

• The urban development corporations which clear derelict industrial sites and create modern factory and office develop-

 Training and Enterprise Councils they can help in recruiting and training staff.

 English Partnerships, the urban regeneration agency which has inherited the portfolio of factories, workshops and offices managed by English Estates. Regional and local development organisations such as the Northern Development Company which covers the

north-east and Cumbria. Enterprise zones offer companies which set up in them exemption from business rates, 100 per cent allowances on corporation tax for capital expenditure on buildings, and greatly simplified planning procedures. At present there are just six, with three more about to be set up in former coalfield areas such as Lanarkshire in Scotland.

One of the most successful enterprise zones was set up after the closure of the steelworks in the Northamptonshire town of Corby. Its term expired in 1991, but it had been sufficiently successful in attracting new businesses for Corby to be removed from the list of assisted areas

when the map was redrawn last year. At the same time as Corby disappeared from the map of assisted areas, parts of London and the south-east of England were added for the first time.

In London, the Lea valley, Park Royal estate and the London end of the East Thames corridor are now included - providing help for companies relocating close to the capital's heart. Outside London, the Isle of Wight and parts of Kent, Sussex and East Anglia have joined the list of economically disadvantaged areas.

Overall, the assisted areas cover 34 per cent of Britain's working population. Slightly less than half lie in what are termed development areas, those the government says have the worst unemployment problems. They are eligible for higher rates of regional selective assistance and for both types of regional enterprise grants.

Less generous support is available for the remaining assisted areas, known as intermediate areas. The Isle of Thanet in Bast Kent is the

first part of the south-east to acquire development area status, to the delight of the local authority.
"It has taken Thanet into a different

league," says Mr David Ralls, chief executive of Thanet district council. "We've already had £4m in grants for Thanet companies seeking to expand. And there is an accelerating range of inquiries from companies thinking about moving into the area, attracted by the availability of

Regional selective assistance is available to manufacturing industries other than those where support is barred by the European Union (such as iron and steel, shipbuilding and man-made yarn). Services also qualify so long as they serve more than the local market. Grants are based on the fixed capital costs of a project and on the number of jobs it is expected to create. On average,

awards in development areas run at

between 15 per cent and 20 per cent of the

capital cost of a project. In intermediate areas, the average is 10 per cent.

Regional enterprise grants are available to small companies in assisted areas and localities affected by colliery closure. For investment projects, these can cover 15 per cent of the cost of fixed assets up to a

maximum of £15,000. Innovation grants to support the development and introduction of new or improved products or processes cover 50 per cent of eligible costs up to a maximum of \$25,000. They are also available in inner-city areas covered by a City Challenge scheme or a task force.

In 1992-93, more than £200m was paid out in regional selective assistance by the Department of Trade and Industry, the Scottish Office and the Welsh Office. Regional enterprise grants totalled £8.4m.

Northern Ireland, which has its own industrial development programmes spent another fibers.

ea breezes. Lakes and mountains. Historic sites and buildings. Such prominently in advertising and marketing material as Britain's cities and regions compete with each other for new

industrial and commercial It is an easy game to play, at least for advertising agencies. Britain's compact nature and extensive motorway system ensure that no example of grim industrial dereliction and urban decay is more than about an hour away from glorious scenery.

This is, however, only the beginning. Companies considering relocating - and their employees - are asking increasingly detailed questions about the quality of life. Access to fresh air and outdoor amenities is indeed an important consideration, but it will not sell a location that has a negative reputation in other

In Britain, many organisations considering a move, and

local authorities seeking to attract investment, make use of the researches of the Quality of Life Group, a joint unit at Glasgow and Strathclyde universities. Since the 1980s, the group has tried to break through the inevitably impressionistic, "beauty is in the eye of the beholder" approaches to finding a good place to live, and develop a sound academic basis for measuring the quality of life. Opinion surveys were constructed to establish the factors people regarded as most important in a location, and the results then applied to amenities available in particu-

lar cities and towns. Living in a low crime area emerged as the most important priority, followed by access to good public services and suitable housing. All these factors were regarded as more important than employment prospects, which came fourth in the order of priorities.

When the Glasgow-Strathclyde researchers applied the public priorities to actual towns and cities, Edinburgh

The best place to live share Edinburgh and Perth's when it was European cultural emerged as Britain's most strong tourist images. Bradford, Stoke-on-Trent and desirable urban location. Both partners work in a growing number of households, meaning that employers must take account of employment prospects for spouses when making relocation decisions. Living costs are obviously another factor likely to feature in discussions about

locations. The Staffordshire-based Reward Group, which conducts research and consultancy on pay and benefits, carries out surveys on relative living costs around the country. Its most recent found that all the most expensive locations were in the south-east - London, Woking, Welwyn Garden City, Slough and Berkhamsted - while the cheapest were Northern Ireland, Billingham in Cleveland and Wolverhampton. Over the past five years, however, living costs in the north have risen compared to the national average while lower house prices have reduced the relative cost of living in the south. London scored badly on the Quality of Life Group's assessment of British locations. Its

The second of th

# Rail and road in a new climate

What the railways achieved in the middle of the 19th century, the motorways have done in the second half of the 20th. Both opened up parts of the country previously cut off from the commercial mainstream and increased the choice of locations available to business.

But while both transport networks are now substantially in place, the ways in which they are managed and financed are undergoing considerable change. British Rail is being privatised after 47 years in public ownership while the motorways, previously free at the point of use, are being prepared for an ambitious electronic tolling programme.

If these two experiments are successful, there is every prospect that both road and rail will provide a better service for the business community. But the more commercial climate in which both modes of transport will be required to work could have considerable financial implications for the business user.

To take rail first: the privatisation, or more accurately the franchising out, of British Rail's operations will lead to the creation of 25 independent train operating companies. They will compete to provide train services, using leased rolling stock on track rented from a separate infrastructure company, Railtrack.

Management buy-out teams and trade bidders from sectors such as buses and shipping are all gearing up to bid for BR's operating companies as they are put up for sale over the next three years. The operations on offer range from single lines such as the London to Gatwick airport express to entire networks such as Scot-Rail and Great Western.

Successful bidders will acquire franchises, probably for between five and 15 years, to provide a rail service over their designated routes. As the train operators settle down, they are likely to want to expand their activities to compete with other franchisees.

The government will maintain a considerable level of subsidy to most of the operating companies but it hopes that managers freed from the constraints of BR will be able to expand the market place.

Many of the BR managers currently contemplating bids have ambitious marketing plans. Despite the sophistication of BR intercity's marketing to the business traveller and its success in expanding rail usership, there is still enormous potential among business travellers previously wedded to the company car.

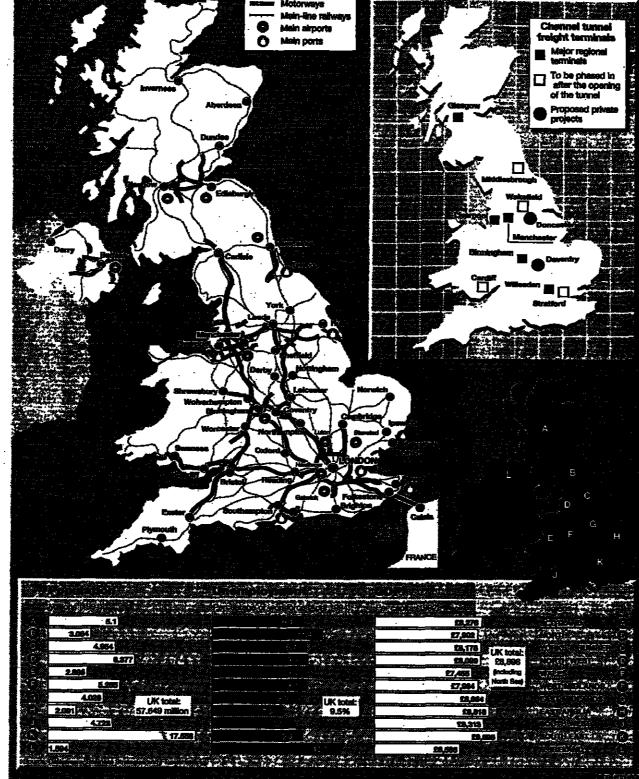

While much of the market

growth is expected to come from expanding off-peak, discounted leisure travel, some rail managements have plans to attract business travellers who may not have used a train for the past decade. Many husinessmen and women have an outdated idea of the service now offered by the railways.

Ideas under consideration

include free travel to reintroduce people to the idea of using the train, the provision of "club class" carriages for business travellers, and an increase in high-speed shuttle services designed to attract the businessman.

Privatisation does, however, also increase the prospect that

little-used lines will close. The government says it expects there will be no significant changes in the extent of the rail network for the first few years but splitting up the railway will expose to public view the profitability or otherwise of individual routes. It would then prove harder to justify massively loss-making lines.

Less radical change appears likely for the freight side of RR where its bulk operations, car-

rying products such as coal

will plug the British rail network into that of continental Europe and does open up significant opportunities.

The government's plans for BR coincide with moves internationally to free railways from state control though the British approach is considerably more ambitious than that elsewhere. Proposals to introduce tolls on the motorway network, on the other hand, follow a pattern long-established in France and Italy.

e Euroster arrives at Waterioo international terminal

and steel, are being split into three geographically defined companies and put up for sale to the private sector. The domestic container business, moving "boxes" from ports to inland railheads and the international business, shipping containers by ferry and the Channel tunnel, will also be

Domestic rail freight has always been hampered by the absence of many viable longhaul routes in the UK but the opening of the Channel tunnel With ever-tighter constraints on the government's transport budgets, the idea is to make better use of the existing motorway network rather than to continue building new roads. The Department of Transport recently dropped or shelved nearly a third of its

221bn roads programme.

The department is currently working with nearly 400 private sector companies to develop a comprehensive electronic tolling system which could cope with Britzin's busy

motorways. The system needs to be capable of registering and charging up to 12,000 vehicles an hour travelling at speeds of up to 70mph.

The likelihood is that over-

will therefore increase.

and long shipments.

But motorway tolling should

lead to a reduction in conges-

tion and thus reduce journey

times for the business traveller

Charles Batchelor

The likelihood is that overhead or roadside "readers" would record the passage of a vehicle, deducting a sum from the driver's pre-paid account or billing him or her for future payment. The government has rejected from the outset the idea of installing payment bootis on the motorway on the grounds that they would slow the traffic flow.

In its technical detail this programme is more advanced than any tolling system in use around the world, a factor which causes some observers to doubt whether the government will achieve its ambitious target date of 1998 to introduce the new system.

Mr John MacGregor, transport secretary, has spoken of charges of 1.5p a mile for cars and 4.5p a mile for lorries. The government calculates this would raise £700m a year if the entire 1.900 mile motorway network were covered. These charges are low compared with those imposed on the continent but the government is fearful of driving motorists off the motorways to other trunk

Motorway tolling will force travellers to make a payment at the time of travel. That may lead them to consider if their journey is worthwhile or whether they should take the train. Clearly, the impact of tolling will depend on the level at which charges are finally set, though travel costs would be only one issue among many to be taken into account.

There is no doubt, however.

Impact of the Channel tunnel on business

## Barrier that may fall

The Channel tunnel, the first land link between Britain and France since the ending of the Ice Age 11,000 years ago, will have a profound impact on travel patterns and the British psyche. It is also expected to have a considerable influence on the location plans of business.

The second secon

ness.

The tunnel should be able to offer a degree of convenience and reliability which the ferries, subject as they are to the vagaries of the weather, cannot match. Despite the improvements in the quality and the frequency of ferry and airline services in recent years, the need to board a ship or take an aeroplane has meant that the Channel has remained a psychological barrier to business.

rier to business.

The creation of a land link between Britain and France should change all that, though the tunnel is just one element in the rapidly evolving European business environment. The creation of the single European market and changes in manufacturing and distribution patterns also have an important influence on a company's location decisions.

pany's location accisions.

The tunnel's opening will have both a regional impact—on location decisions in south-east England and north-east France—and also a broader European impact on companies with a scale of operations and a location strategy which embraces the entire continent.

At a regional level, location decisions will be influenced by the development activity which is under way along the

rail links between the tunnel

and London and Paris respec-

tively. In Kent, Ashford has high hopes of becoming a growth centre while across the Channel ambitious developments are under way in Lille. Ashford's position seems assured following the government's decision to route Channel tunnel trains through the centre of the town rather than bypassing it to the north. This should provide a boost for the new international railway station currently being built in

But elsewhere along the route of the Channel tunnel rall link, the delays and uncertainties which have surrounded the project have held back property developments, according to Mr Kevin Lee, a property researcher at chartered surveyors St Quintin.

Waterloo is the site of an

the centre of the town.

impressive new international terminal but completion of the Channel tunnel rail link in 2002 will shift the main London terminus to St Pancras.
The prospect of this move has left companies uncertain as to the best location for fast Channel tunnel connections.

Similar uncertainty reigns over the site of another intermediate station on the route with three contenders in the ring. Stratford in east London, Rainham in Essex and Ebhafieet in Kent are all seeking to win approval for ambitions property developments though it is likely that only one will be chosen. Too many stops on the high speed link would reduce the value of building the link in the first place.

In stark contrast to this

the link in the first place.
In stark contrast to this delay in the UK, the French government has pressed shead with the construction of a high speed line linking Calais with

Improved rail freight links between the north and ttaly will clip hours, if not days, off shipment times

Paris via Lille. Lille, which is now only an hour from Paris by train a grande vitesse, is developing Euralille, a sizeable office and retail project on the site of its recently completed TGV station.

On the broader, European scale, the vastly improved rail freight links between, for example, the north of England and Italy, will clip hours, if not days, off shipment times across Europe. This can be expected to influence the location decisions of businesses with manufacturing plant spread around Europe.

By the same token, rapid passenger journey times between London, Paris and Brussels may prompt multinational corporations to rethink their decision on the location of main or branch offices. Even before the high-speed rail link is completed between the tunnel and London, through journey times should prove very competitive with the airlines.

When the tunnel is finally open for business it will offer four principal services to the traveller or the freight operator. Freight will travel through the tunnel on long-distance services carrying containers, swap bodies and trailers or on shuttles

The shuttles will carry trucks between Folkestone and Calais but the long-distance services will run to a wide range of destinations throughout Europe.

London to Madrid should be possible in 36 hours and Manchester to Mannheim in 24 hours. In the absence of the delays associated with rail freight shipments across the Channel by ferry, through journeys by train should take only half as long as the equivalent road journey, according to calculations by the organi-

sations selling rall space.
Ralifreight Distribution,
British Bail's freight arm
responsible for container shipments, expects the opening of
the tunnel to increase train
freight volumes from 2m
tonnes a year to 6.5m tonnes

In the meantime, passenger services will also consist of through services, initially between London, Paris and Brussels, and of car shuttles operating between Folkestone and Calais.

The opening of the tunnel will make it easier for multi-national companies to include the UK in the rationalisation of their distribution operations. Many companies have been moving away from national distribution centres—which involve considerable amounts of inventory—towards continent-wide distribution operations.

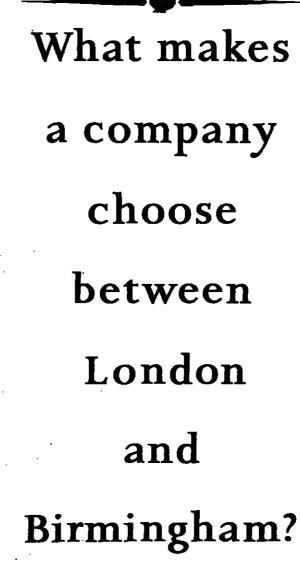

"Because the Channel tunnel provides a more effective link with Europe it creates the option for distribution centres to serve the whole of northwest Europe, including the UK," says Professor James Cooper, director of the Cranfield Centre for Logistics and Transportation.

This may mean that companies which at present have a UK distribution centre in the Midlands will consider relocating to northern France or the Benelux countries. However, such a move would not be without its problems because supplying the Scottish and Irish markets would be more difficult.

Creating Europe-wide distribution centres may also run into the problem that different national markets may have their own technical, language and packaging requirements which reduce the scope for cutting back on inventory.

Delays to the opening of Channel tunnel services have proved a distraction from the benefits that the tunnel will eventually bring. If it can show it is able to provide a reliable, high-quality service it will become an important factor in location decisions.

Charles Batchelor

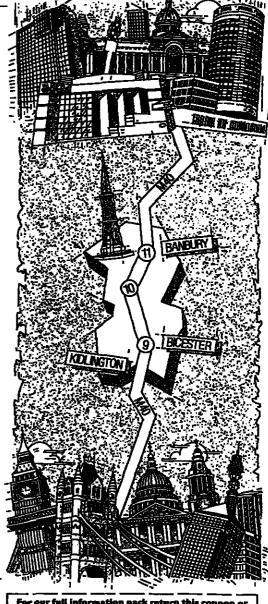

Probably the fact that Cherwell North Oxfordshire offers an unrivalled combination.

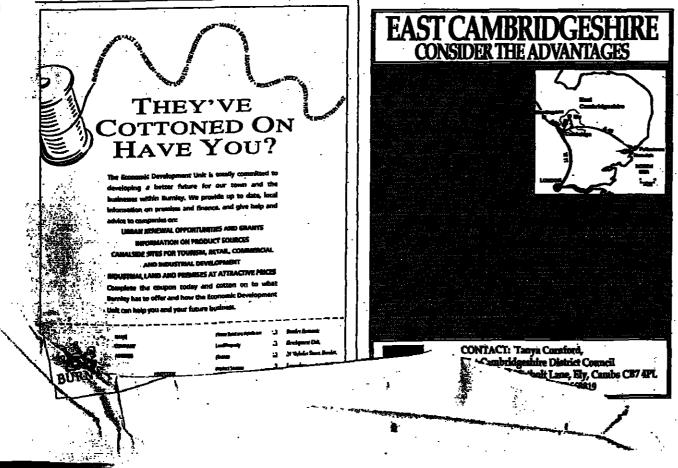

Situated astride the M40, the area has plenty of thriving business locations amongst some of England's finest countryside.

Road and rail connections are excellent, whilst Heathrow and Birmingham airports are in easy reach. Affordable commercial properties are readily

available in prime locations and there are still acres of room for greenfield development.

## Message gets across

It has taken a long time for the business community to accept the need for specialist advice on moving. Unlike footloose America, where the relocation industry shifts small armies of staff every year, UK companies have tended to maintain a stiff independence. Relocation, like cold showers, might be good for the constitution, but it is something one does privately and in complete acceptance of inevitable discomfort.

Gradually, however, the message has worked through. Since the idea was brought across the Atlantic 20 years ago, a network of more than 60 consultancies has carved itself a niche in the market, with about 150 small operations geared to the more limited task

However, last year the Inland Revenue threw a bombshell. A Budget announcement restricted tax-free expenses to £8,000 a head - about half the true cost of moving staff.

As relocation had almost ground to a halt because companies could not afford to move or were no longer being driven out of London and other cities by high rents, this final straw cut business by 30 per cent last year.

Recently, the threat has been discelled through a carefullyworded government climbdown. Consultants and employers can continue to buy homes of staff at a guaranteed price without facing tax demands.

Ironically, however, last year's potential disaster could end up as the making of the sector. "All these expenses still have to be noted on each employee's tax form," says Mr Andrew Finney, managing director of Hambro Countrywide Relocation. "This shifts the focus of relocation from personnel offices onto finance officers' desks and will finally make companies aware of the

That will give consultants the chance to insist they can do it cheaper. "We are no different to any out-sourcing service," says Mr Finney. "Companies can move themselves. But we do it better."

Around 70,000 people are provided with full relocation support by employers each year through house purchase guarantees, bridging loans, moving expenses and resettlement counselling. Relocation specialists still handle only around around 20,000 of these, says Mr Finney. "But there are probably 250,000 moves for employment reasons each year, so the potential is enormous.

The range of consultants is vast. The Edinburgh-based Association of Relocation Agents lists over 140 members, from sophisticated commercial agencies to one-woman offices that try to find homes for long-distance movers.

Black Horse is the market leader, moving about 6,000 people when the market peaked in

according to Black Horse. Fees are perhaps the major barrier to attracting busin Companies seeking to cut costs through relocation are often reluctant to take on the expense of a consultant.

The average fee for a corporate property purchase is almost £1,400, while private customers pay a £1,500 flat fee plus just over 1 per cent of the purchase price, according to the ARA.

Even paying staff to move sticks in the craw of some managers. "But there is a simple counter-argument to companies who balk at relocation subsidies," says Mr Finney. They can pay the average cost of £15,000 to £20,000 to move a manager or lay out the same amount with a recruitment agency for a replacement.

They then have the on-going costs of familiarisation, as well, and will be getting an unknown quantity rather than a manager they know."

An English economist who visited Glasgow recently was ticking off features of the Scottish economy for which, he said, even the south of England would give its eyeteeth. He listed a (slightly) lower memployment rate, an almost total absence of negative equity, a manufacturing base that now included virtually no aged plants and, finally, an unrivalled capacity to attract inward investment.

In Scotland inward investment (or foreign direct investment - FDI - as it is increasingly called) is no longer the fashkonable subject it was a few years ago. Only last winter Scottish Enterprise, the development agency, was warned by the US consultants Monitor that foreign branch manufacturing plants were artificial creations which showed little capacity for Spontaneous growth.

The report, focusing on the Scottish electronics industry, also reiterated concerns that in the near future Scotland would find it increasingly difficult to attract FDL It would face stronger competition from low cost manufacturers in southern and eastern Europe. Yet the fact is that a steady

stream of foreign-owned companies continues to arrive and open manufacturing plants. Scotland is gradually getting more used to having an economy in which the commonest manufactured item is an assembled printed circuit board, rather than a piece of riveted steelplate.

It is difficult to argue that plants like International Business Machines' complex at Greenock or Compag's nearby facility at Erskine have not put down roots in Scotland, even if the former does only a small amount of product development, and the latter almost none.

"We've had a hell of a year."

Can Scotland continue to attract foreign investment?

## Era of jobless growth

says Mr Robert Crawford. director of Locate in Scotland. the inward investment bureau which has offices in the US. the Asia-Pacific basin, continental Europe and London.

Though he cannot reveal his totals for 1993-94 (the report has to go to ministers), he hints that Scotland's performance in terms of the number of FDI projects won, jobs created and money committed will be even better than in 1992-93, when foreign companies committed about £350m of FDI to Scotland and said they would create more than 5,000 jobs.

As an example, Mitsubishi Electric opened its fourth manufacturing plant in Scotland a few weeks ago, a 95,000 sq ft facility at Livingston which makes air-conditioners and employs 200 people. In November the Singapore electronics manufacturer PCI announced it would open a plant in East Kilbride that would eventually employ 300 people.

At the beginning of this month, ICC, a Chicago-based company which manufactures portable battery chargers, said would set up a plant in East Kilbride, creating 400 jobs over the next three years. It will be a major supplier of, among others. Motorola's big mobile telephone plant at

Raster Inch. And so it goes on, Sethacks, such as the departure from East Kilbride last year of AST Computers, are absorbed. The fact that Compaq decided to establish a new surface mount technology assembly line at Erskine, instead of locating it in Singapore, is justifiably highlighted, as is a further 193m investment by Roche in its Dairy, Ayrshire pharmaconticuis plant.

According to Mr Crawford. the US economy, growing at 5 per ceni a year, continues to be a good source of new FDI projects. Japan, on the other hand, is yielding little. Talwan spore, he thinks, are more likely to produce joint ventures and licensing arrangements with Scottish companies rather than FDI projects, though he hopes to win a Taiwanese project later this year.

"I don't think the emphasis on jobs as a measure of success is sustainable in the long term," he says, while acknowledging that as a yardstick it has attractions for politicians. "In an era of jobless growth we've got to find some new way of measuring what foreign companies contribute to

To try to extract more value from the foreign businesses already operating in Scotland (there are between 490 and 590 of them) Locate in Scotland is establishing a post for an official to strengthen contact with them and see what extra opportunities they offer. It is also appointing a staff person

to Taiwan. Although the threat of competition for FDI from eastern Europe is often flagged up, Scotland has yet to feel its effects strongly. "Bastern Europe has not become massively competitive so far," says Mr Crawford, "but it will develop. Most of the foreign money that's gone in there has been used to buy up privatised

## David Lawson on staff transfers

## Keep the workers in the picture

in the marriage of labour and capital, the partners are unequal. Staff are usually the last to know about a crisis that

an sometimes lead to divorce. The decision to relocate is often signed, sealed and ready to deliver before anyone gets around to telling most of the people affected. Few companies will then drop the whole idea if a workforce decides not to play. In fact, some are quite bappy to leave them behind.

"While costs and better premises are the main factor in moves, some relocators see a definite advantage in shaking up working practices and getting rid of dead wood among staff," says Ms Caroline Rawson-Gardiner, of property consultants Hillier Parker.

They still need to persuade a core group to move, however, and most are shocked by the depth of feeling generated. They appear blind to the feelings of people whom they should know intimately.

For instance, one company questioned in a Hillier Parker study was threatened with an action before the Equal Opportunities Court by women workers. They had mobility clauses in their contracts but still felt they could not move because their husbands were primary breadwinners.

Three-quarters of relocating staff with a working spouse are concerned about their partner finding work and loss of double income, according to a survey by Black Horse Relocation (BHR) and the CBL Yet only a third of employers saw this as a problem. The same gap is evident over education of children, which worries 90 per cent of relocating parents but never crossed the minds of two-thirds of company decision-makers.

As the typical relocator is a 38-year-old middle-manager with two children and a working spouse, the potential for disruption and loss of key staff is obvious.

Even when feathers have been smoothed and workers WOD OVER by promises of help, employers still appear to get it wrong. Few staff polled by Black Horse/CBI claimed to have seen information on help for "trailing" spouses. Almost 40 per cent believed there was no non-financial assistance. Most problems boil down

to lack of communication. Just knowing someone is there to answer questions can make all the difference," says Mr John Carolan, managing director of BHR.

Many companies use relocation specialists in some way during moves, which means staff should have access to counselling services. Trained advisers can provide information on buying and selling homes, jobs for spouses and details of potential schools in the target area. Some agencies allocate personal counsellors who take responsibility for particular individuals. But only half of all relocators stump up the

Most relocators tend to call for help from consultants too late, adds Hillier Parker. This is usually once they realise the dissatisfaction among staff by which time the damage has been done and relationships have been soured.

Avoiding hurdles before they appear requires careful planning. The first requirement is a formal relocation policy so staff at least know where they stand. "Correct timing of a relocation announcement is vital," says Mr Steve Abbley, managing director of PHH Homequity. "No company should make

known its intentions before establishing its relocation strategy and in particular its policy for employees." Most major groups have already thought of this: 90 per cent of those with an annual turnover of more than £500m have a written policy, says BHR. Unfortunately, hardly any include non-financial

stance in these statements Trouble can flare even when there is a written policy. "Support from the workforce will only be achieved if the information is believed and trusted," says Mr Abbley.

Companies must also stand their ground once a decision has been taken to move - ever if this comes as a shock to workers. Confusion and wavering over whether a relocation will go ahead can be even more harmful to staff relations than the threat of losing key workers. That means doing an

exhaustive study about why - and whether – to move. Bringing workers into decision-making can be the give that holds staff together. says Mr Abbley. Briefing key staff early on about the support available gives them a feeling of importance. The tenor of the follow-up

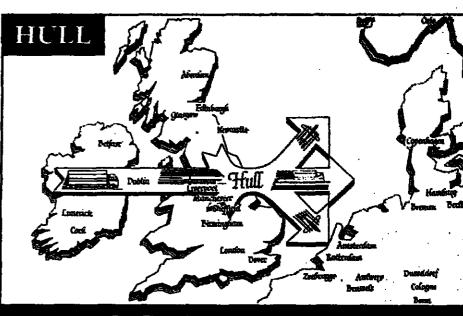

approach is crucial, however. We see the workers as our clients nowadays rather than the employers, and treat them accordingly," says Mr Andrew Finney, managing director of Hambro Countrywide Reloc-

That means counselling and advice for whole families rather than just cramming workers into a hall for a lecture. "All too often, an employee's family is the real source of discontent," says Mr Abbley.

Hillier Parker found that almost half the country's top 500 companies intend to cut costs by relocation. During the recession staff

have been forced to tag along. But as the economy revives, alternative job opportunities will emerge. So employers will face twin pressures of needing to rationalise and move but greater difficulty in holding on to key workers. Unless they make greater efforts to improve communications, the divorce rate between capital and labour could soar over the

next decade.

#### A CAPITAL LOCATION!

Just as its Port is a locomotive for the local economy so acts the City of Hull as the dynamic iness capital of Humberside with a concentration of industry, commerce, retail, educational and other major city services unavailable elsewhere for 50 miles around.

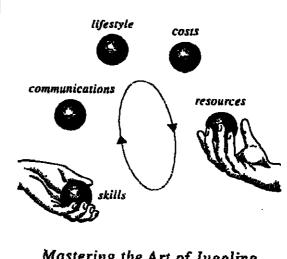

As Britain's trade progresses with the countries of the Single Market and the European Union itself extends its membership so Hull's strategic position on the east coast, facing the heart of Europe, will become more influential for investors.

The City offers the relocating newcomer an exceptional combination of assets - competitively priced land and premises for lease or sale; professional services accustomed to global trading emands, a versatile workforce; two successful Universities and an astractive living enviro Hull City Council's Economic Development Agency works pro-actively to stimulate growth in the local economy. It provides informed, free, confidential advice to inward investors and a guiding hand in negotiations with other development services.

The city holds a strong vision of its future as the country's 'Northern Gateway to Europe' and believes the case for companies to consider it as a new location is outstanding. Details may be obtained from A. E. Howard,

#### RELOCATION IN THE UK 9

he British Council has not yet stopped counting the benefits - many of them unexpected - of its relocation from London to Man-

chester in 1992. The council is Britain's principal agency for cultural relations overseas. It has charitable status, a royal charter and a funding link to the UK Treasurv. Most people would expect it to do the bulk of its headquarters work, like other such British institutions, in London. But the council's main

strength is its global network of about 6,000 people. They staff the real front offices. Where the British head office and back-office staff work is now irrelevant as the UK becomes ever smaller through improving physical and electronic communications. in any event, London posed

problems. At one stage, council staff were scattered through 10 office buildings. Support services were a problem. A large, in-house maintenance staff was needed. A fleet of cars and vans was required to move people, paper and packages corps of messengers had to be employed. There was a perpetual problem with junior staff.

Part of the state of the state

like many London organisations, the council found it hard to retain them in a competitive labour market.

On top of all this, there were the "London" problems of high overheads and operating costs and the effect on productive ity of unreliable public transport failing to get everyone to work on time every day.

Nevertheless, within the council's own ranks there was initial dismay that it should contemplate a move from the capital. As Mr Brian Humphreys, the council's resources manager, puts it: "The first reaction in London was of disbelief, followed by resistance, then acceptance, then co-operation, then surprise."

The choice of where to go narrowed to Glasgow, Leeds and Manchester. There was not much to choose between the three cities in terms of quality of life and the accommodation on offer, but Manchester was the only one with an interna tional gateway airport designated as a hub - and that "gave Manchester the edge," Mr Humphreys says. Although the building which

walk from Manchester Town Hall, it is only a 20-minute

drive from Manchester Airport. The site itself was developed by British Gas and was once a depot in the shadow of a railway viaduct. With the land reclaimed and landscaped, the development has made a notable contribution to environmental regeneration by removing a substantial source of potential blight.

It has also linked well to other developments – such as GMEX, the Greater Manchester Exhibition and Conference Centre converted from a derelict railway station - to assist the expansion of Manchester city centre. The arrangement of the 116,000 sq ft of offices is the work of Business Design Group, a consultancy in working environments with 200 staff throughout Europe. But the relocation of the British Council was not just a transplantation. The move

offered the chance of a radical

restructuring of the organisa-

tion and its operating proce-

functions and use contractors. Competitive tendering enabled it to pick and choose separate contractors for catering, building maintenance, security and cleaning. In addition, there are two "implants" providing sercouncil's £10m of travel of each

year and Rank Xerox for reorographic work.

Another decision was to have no messengers and dispense with the fleet of vehicles and drivers. Instead, more use is being made of information technology, with a terminal per desk, and video-conferencing facilities with London and the council's Hong Kong offices. Similar links will follow to other overseas bureaux.

The Treasury allocated £15m for the move. There was an overall project manager, plus one for personnel, one for the building, one for information technology, one for the move, and one - Mr Humphreys - to get everyone into the building

The British Council started the move in March 1992 and completed it with a big push for most relocating staff during a single October weekend. Teople arrived on the Monday to find telephones working Mr Humphreys says. "I doubt

The approach worked well enough for the British Council to win last year's Du Pont Office of the Year award. The council is now building on preexisting contacts with local universities and Manchester Business School and aims to play an active role in regional economic development. "We are integrating with the whole community," Mr Humphreys

#### THE MIDLANDS

## Accent on 'aftercare'

Johnson Controls, the US automotive components manufacturer, will be the first occupant of the Black Country Development Corporation's automotive components park at Wednesbury. The company figures on East Midlands Development's 1993-94 success list because it is investing in Mansfield. It already has a

presence at Burton-on-Trent. Its investment decision emphasises a developing trend in the attempts by Midlands agencies to stiffen the indigenous economy by injections of new capital. It is the desire to sustain companies which have

already made investments. The reasons are not hard to seek. The domestic recession has both reduced the capacity of British companies to expand and dimmed the desire to relocate. The operating cost differential between London and the south-east of England on one hand and the Midlands on the other has been eroded.

Lower domestic activity has increased the importance of foreign companies in the economic mix of the Midlands. Indeed, Mr Chris Tillett, chief economist at Coopers & Lybrand, accountants, in Birmingham, observes: "If the

rate of inward investment falls. the West Midlands' chances of growing at the national average will be much reduced." But with less inward invest-

ment about, there is growing competition to attract it. "Given the downward trend in inquiries, the principle of 'aftercare' has never been more important. Further investment by way of expansion of foreignowned companies is becoming an increasing percentage of recorded investment successes," noted the forward plan of East Midlands Development, the inward investment agency.

its 1993-94 success list together account for about 2,300 jobs. Similarly, the West Midlands Development Agency reported that 56 per cent of the investment projects for 1993-94 resulted from expansion programmes. "The 47 expansion projects generated £309m capital expenditure, created 2,100 jobs and safeguarded a further 4.000. The jobs created through expansion projects represent 66

Indeed, the 20 companies on

per cent of all new jobs." In total, there were 83 investment projects in the West Midlands. But only 14 were new and 19 were acquisitions of local companies by overseas

involved was £652.7m, triple that of 1992-93. But it is doubtful if so high a figure will be repeated in the current year.

The performance in 1993-94 reflected the relative buoyancy of the world economy the previous year," says Mr Paul Richards, WMDA's chief executive. "International companies coming to the UK have been more active than indigenous companies. They were slightly ahead of the upturn." This has been most notable among North American companies.

This year, though, the downturn in European economies is more likely to be reflected, suggesting that, in terms of economic development, expansion of existing operations should be more significant than greenfield investments.

In this respect, the West Midlands is in a stronger position. than its counterpart. With about 1,000 companies of overseas origin already, the volume of activity is creating its owndynamism. By contrast, the Rast Midlands has done badly in attracting foreign investment - only about 3 per cent of the national total.

One reason has been the lack of a regional organisation and

allied to that the fragmented he full impact of last effort to attract investment. year's redrawing of the East Midlands Development Assisted Areas map has yet to become apparent in northern England, where the has been operating for just over six months, compared with West Midlands Deve provision of state aid to reinment Agency, which has been in the business for 10 years. vigorate the local economy dates from the 1990s

In trying to make up the lost In one sense, the region did ground, Mr John Finch, its not see any great change in the chief executive, stresses the need to work with local organireview; while Darlington in County Durham was taken off the map, the Morpeth and Ashsations. "The way I see that ington area of Northumberland happening is that you say to was added, and in Cumbria the authorities: You have the knowledge and expertise about Workington's demotion from your area; our expertise is in development to intermediate area was compensated by the granting of IA status to Whitepromoting the region and getting industry to look at the region - see us as the overseas haven and Barrow-in-Furness. marketing arm, if you like'.

However, the government's decision to give help for the first time to parts of London and the south and east coast means the "traditional" assisted areas may have to fight even harder for inward investment, with fewer financial resources.

The Northern Development Company, the economic regeneration body for north-east England and Cumbria, with overall responsibility for the region's inward investment drive, learnt recently it had £32,000 - in its 1994-95 funding

increase - a cut in real terms. "The recovery of this region in terms of economic regeneracomplains Dr John Bridge, NDC chief executive. The issue is certain to be raised next month at the

annual meeting between Mr Tim Sainsbury, the industry minister, and the NDC and its counterparts from other regions. The minister faces some tough questioning. Already, the new competi-

tion is asserting itself; on a recent visit to Dubai with the **Cumbria Marketing Initiative** Mr Harry Knowles, chief executive of Furness Enterprise. the Barrow-based agency, came across the rival East Kent Initiative. "There's only so much inward investment to go round; we're all competing like crazy for it," he says.

The East Kent team emphasised its area's proximity to the

Shift in help to south Channel tunnel. North-east "we'll be lucky to get 4,000." and Cumbrian agencies do not

The NDC had sought a zero believe the tunnel will lose them significant inward investment; indeed, Mr Chris Fraser, the NDC's director of interna tional investment, says the new link between Britain and France should be generally beneficial in marketing terms. in the north, the need for

> A66 between Cumbria and the east coast ports is more of a live infrastructure issue. The region's inward investment agencies are reporting a

further improvement to the

recent rise in inquiries. Dr Bridge has noted growing interest from Germany, because of the UK's improving comparative productivity and relatively low labour rates and the strength of the D-Mark.

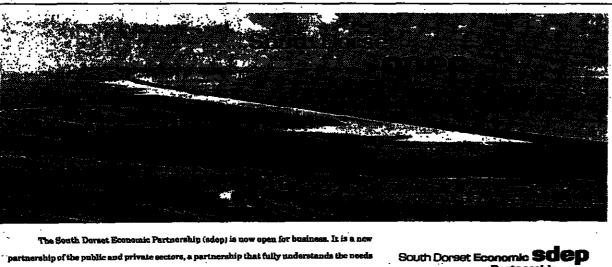

In recent years, the NDC has aimed to secure about 5,000 projected jobs annually, including new and safeguarded jobs, through inward investment. This year, says Dr Bridge,

Even so, the past year has seen some big breakthroughs. West Cumbria has won its first Asian investment. Sammi (UK), a subsidiary of Korean audio speaker manufacturer Sammi Sound Technology, has taken over a former shoe fac tory near Workington. It is now starting production, employing 30 people, rising to 60 by the end of 1994. The tar-

get is 100 within two years. This month Taiwan's CMC Magnetics Corporation opened its £26m floppy disk production plant in Cramlington, Northumberland, expected to create 550 jobs over three years.

The project, receiving £8.25m in government regional assistance, is the UK's seventh investment from Taiwan, and Northumberland's third. Taiwan is one of our markets with the most potential at the moment," says Mr Fraser.

The scale of the MoD relocation dwarfs other recent activity in south-west England and Wales. Before the recession. both regions benefited from considerable relocation and inward investment. In particular. Wales has attracted it from overseas – it has more than 400 foreign-owned manufacturing companies – and the south-west especially from

London and the south-ea The pace has slowed but not stopped. During 1993-94 in Wales, there were 169 projects from other parts of the UK and overseas, compared with 201 schemes the previous year. One big investment announced last year was by Asat of Hong Kong, which is building a £42m integrated circuit plant in Gwent that is expected to create 1,000 jobs. But, as in the south-west, there are fewer large greenfield investments: instead, projects are tending to be small-scale or expansions of existing operations.

In both regions, there are recent signs of an upturn. Mr Ken Poole, senior manager with Price Waterhouse in Cardiff specialising in inward investment services, says. "In the last few months the level of inquiries has picked up in the financial services sector and on the manufacturing side."

In Avon, on the other side of the Severn bridge, it is a similar story. "We're much more optimistic than for a long time," says Mr Mike West, of the Western Development Partnership, an economic strategy

■ WALES AND THE SOUTH-WEST

## Two regions with plenty to offer

forum. "We're on the move." Particular interest is being shown in joint ventures with locally-based companies.

The WDP, set up by the public and private sectors, is a recent product of a changed attitude in the south-west, which in the past has been complacent about the need to attract new businesses. During the 1980s, counties such as Avon Gloucestershire and Dorset had not needed to woo inward investors because they

Ironically - in view of the MoD's investment in Bristol it is the contraction of the defence and aerospace industries, a mainstay of the regional economy, which is a leading motivator in stimulating the south-west to be more pro-active. The region was also hit hard by the recession in the financial services sector, which in the 1980s had seen much relocation to Bristol, Cheltenham-Gloucester and Bournemouth-Poole. A plethora of partnerships to

encourage diversification and inward investment is now in place. In addition to the WDP, there is an economic strategy forum in Gloucestershire and a similar body in Dorset called Partners for Prosperity. The South Dorset Economic Partnership is seeking businesses to counter the defence rundown at Weymouth and Portland, which last year gained assisted area status. Somerset has formed an economic partnership, and Devon and Cornwall is being promoted by the Westcountry Development Corporation.

Behind these initiatives lies a common concern at the lack of a regional development organisation. A "partnership of partnerships", the West of England Partnership, is about to bid for Department of Trade & Industry funding as an RDO for attracting international investment. The only existing such agency in the south-west is the Devon and Cornwall Development Board.

Both regions have a flexible and often skilled labour force, relatively

low pay levels, and networks of professional and business services

Envious eyes are cast in the direction of Wales with its government-funded Welsh Development Agency and Development Board for Rural Wales. These can adopt a co-ordinated approach to marketing, land equisition and property provision and, in conjunction with the Welsh Office and local authorities, offer a range of grants and incentives.

Both regions share similar advantages for companies which relocate: a wide variety of sites, a flexible and often skilled lahour force, relatively low pay levels, and networks of professional and business services, especially in Bristol and Cardiff.

While there are weaknesses in the transport infrastructure for example, air services perhaps the biggest selling point is the countryside. Staff, and their families, are easily special place," he says. The bay can offer a very competitive grants package as an intermediate assisted area, with additional incentives as a development corporation." Both Wales and south-west

awareness that Cardiff Bay is a

England offer many other sites with potential. These range from the Snowtionia Business Park, virtually surrounded by the national park, to the Atomic Energy Authority site at Winfrith, Dorset, where it is intended to establish a technology park, and to the old naval docklands at Plymouth, now the responsibility of a developent componetion.

Another development corporation is at Bristol, where its prime site at Quay Point, near the city centre, is being marketed. Around Bristol, large industrial sites are becoming available north of the city, and to the west at Severnside, near the expanding Bristol port and the second Severn crossing due to open in 1996. Avon has a strong image within the UK as a good location for industries such as telecommunications, and for research, development and innovation with its three universities.

Further east, along the M4 corridor. Swindon remains a leading town for inward investment, in the 1980s, more than 100 companies employing at least 20 people moved there, drawn by its proximity to the motorway and Heathrow airport. The new arrivals, many of them specialising in high technology, account for over 12,000 jobs.

The best-known newcomer to Swindon has been Honda with its £350m plant. While no one in the south-west or Wales expects inward investment on that scale in the foreseeable future, and competition to win business has become much tougher, it is felt that the two regions can compare favourably with other UK regions in what they have to offer.

Michael Cassell on investing in Ireland

# The ugly bride with the big dowry

There is no escaping it. Whatever the commercial and strategic attractions of setting up shop in Northern Ireland, the many positive aspects to life in the province remain overshadowed by deeply. ingrained images of a hopelessly divided, dangerous

society. Sir Patrick Mayhew, in a recent speech to business did his best to place Ulster's troubles in their correct perspective, stressing that the province was "not running a Clint Eastwood scenario 24 hours a day". Given recent successes in attracting new corporate investment, the messar has not been falling on deal

Northern Ireland inevitably has a hard job in selling itself as a business location to companies looking to move existing operations or to establish new ones; why should anyone opt for west Belfast, with its random, sectarian murders and brick and iron barriers intended to separate allen communities? Surely, life in Telford would be much easier?

The media agenda dictates that Ulster usually means bad news, with the result that its problems can be distorted and exaggerated. But problems there are and they cannot, sensibly, be minimised by those seeking to attract new investment from within the UK or

Business assets in the province are regularly the victims of paramilitary activity and employees are regularly subected to intimidation: security costs can be punitive and employers face a daunting catalogue of obligations under a tough set of fair employment laws designed to eradicate discrimination in the workplace.

But for most people and most sections of the business community, Ulster's tragedy rarely intrudes directly into their daily lives. The province's economy has, despite the recession, remained relatively than in the UK as a whole. Last year, for example, manufacturing output grew by double the UK average.

Equally to the point, the province can provide a business base which offers newcomers, by virtue of its extraordinary difficulties, extensive financial incentives to help overcome reservations about moving into what many see as nothing less than a "war

Ulster, because of its higherthan-average UK unemployment and its "category one" status within the EU aid hierarchy, can offer cash help that is unrivalled anywhere in Europe. No matter that one development official remarks: The bigger the dowry, the uglier the bride".

Cash help may not, alone, be sufficient to give Ulster the edge over alternative locations but in the final analysis, it can

Financial aid played a big role, for example, in the recent decision of Transtec, a Birmingham-based specialist engineering group, to set up a £16m

plant in Londonderry to manu facture siuminium castings for the automotive sector.

The company will join a growing list of automotive suppliers who have now established operations in the province, including companies from Japan, France, the US and Germany. The new plant will, in the first instance, supply cylinder heads for shipment to Ford of Germany. Transtec already employs

more than 2,000 people in 12 wholly-owned subsidiary operations, most of them in the West Midlands. According to Mr Peter Munday, chairman of the company's automotive division, the business had decided on strategic grounds to look beyond its existing casting facility in England for the new plant and had considered a number of European locations before opting for Uister.

The reasons for deciding on Londonderry, already the recipient of a significant inward flow of oversees investment, include good infrastructure, the potential for recruiting quality labour and the all-important assistance of the local industrial development board.

package of assistance also had to be sufficient to counter offers being made to us by other European locations. Aluminium casting is a very competitive, price-conscious business and we needed to ensure we kept our costs as low as

"We could only do this by examining development areas with the highest incentives for inward investors. Although this was the major priority, it needed also to be coupled with the other plus factors which can be delivered in Northern Ireland, such as good transportation links and a factory which could be built quickly to

our specifications."

The Industrial Development Board is not always too keen to discuss the details of financial assistance for specific projects but Mr John McGuckian, its chairman, disclosed that the total government aid package made available to Transtec will be about \$4m. Few locations in Europe will prove as generous in offering cash help accounting for one-quarter of total

Operational costs, once established, are also signifi-cantly lower than in Britain or in mainland Europe, a point forcefully underlined by Sir Patrick Mayhew in a recent ministerial check-list of Ulster plus-points. He claimed, however, the beneficial picture was not the result of sweated labour but in part from a generaily lower overall cost of liv-

ing in Northern ireland", For overseas investors, access to the markets of the European Union offers another important bonns and has been the driving factor behind location decisions taken by companies from the US and southeast Asian countries. IDB estimates suggest that around 55,000 people in Ulster are now employed by foreign owners.
The total is rising steadily in

the wake of a particularly successful period of IDB activity and is shortly expected to be given a huge boost with the decision by Hualon, a Taiwanese textile group, to commence the biggest inward investment project since the ill-fated De Lorean car plant.

The European Commission has given clearance to a synthetic fibre project which will bring 2,000 lobs to Glengormley, close to the Belfast. At one stage, the project was thrown into doubt when European textile companies complained that it would create unfair competition, but the overriding need for jobs in the province finally won the day.

The new plant is expected to cost nearly £157m and the UK government, via the IDB, will put around £50m into the kitty. With financial support on such a scale, fears about the likely impact on business of limited civil strife quickly recede.

The Hualon decision was welcomed by Mr Roy Baillie, vice-chairman of the Confederation of British Industry in Ulster, not just for the badlyneeded jobs it would bring but also for the strong signal it would send to other international companies looking for a route into Europe

The hope is that such decisions will not be seen merely as a positive move in the face of Ulster's problems but that, in bringing new prosperity to be shared by all parts of the community, they will help end

the region. All the regional agencies operate "aftercare"

the agencies, astute inward investors can exploit this to

Regional agencies, such as Inward, the Northern Development Company in north-east England and Cumbria, and the Yorkshire and Humberside Development Association will gracefully give best to each other in the end, but only after fighting fiercely to win an inward investment project for their own region.

Each English region has such an agency, partly funded by the Invest in Britain Bureau and partly by local authorities and private sector supporters. This spread of support means there will also often be competition within a region, with local authorities or training and enterprise councils throwing in discretionary grants, rental holidays or help with training.

In some areas with declining industries such as coal or steelmaking, or with endemic problems of economic structure, such as Merseyside, there is government or EU assistance. Grants will vary according to the numbers of jobs created. but the inward investor can again exploit competition between areas in Britain, and, indeed, elsewhere in the EU.

In the UK, every area outside the south-east can rightly offer good quality of life, access to good infrastructure, and - in most cases - a pool of adaptable labour. All have glossy brochures to sell their wares,

some of them more objective than others, but all of them reasonably fair in what they claim.

The warmth of welcome may also make a difference. Three years ago, Crewe Business Park won Sokkia International a surveying instrument business - because the mayor entertained the Japanese company's executives handsomely, while a rival local authority in Greater Manchester offered a barely hospitable reception.

Agencies such as Inward, the NDC or YHDA will arrange a programme of visits to view sites and meet key people. They will also provide critical data, such as the availability of suitable or adaptable labour, or the ease of access to a network of component suppliers, or transport links with the rest of the UK or with the European

Inward, in north-west England, was the most successful of the regional agencies in 1993-94, setting a record for the fourth successive year, despite a drop in general levels of inquiries worldwide because of recession.

Nearly 3,000 jobs were created by 36 inward investment projects that brought in £107m of new capital. This included the MBNA America Bank, which opted for Chester rather than Harrogate in North Yorkshire. This credit card marketing operation will eventually create 800 jobs over five years. A third of the projects were

expansions by some of 1,200

foreign companies already

panies may often do better

with a comparably-sized profes-sional firm, rather than the more obvious giants. Campbell Hooper, a London firm with only 70 staff, has published many articles and booklets on the subject - the sort of clue to look for. Phoning a few firms in the nearest financial centre and asking for their promotional literature is a good start to finding suitable advisers. Many inward investors also

have their own networks and associations of expatriates. They are also a source for recommending experienced professionals and explaining to pitfalls of relocating to the Relocation has been do dreds of times aires mices last decade alore oriers sense to "
